

April 25, 2005

Dear Ms. Sherina Kapany:

Please be advised that as a U.S. DOJ Select Agent User I cannot deviate from standards of practice in such a study. It is important to note that irrespective of volume, be it 50ml or 50 gallons, the formulations are identical and do not change with increase in volume.

The formulations that are being submitted for posting on the [redacted] by Bio-Germ Protection are in fact the same formulations that have been used in [redacted] Bio-Germ Protection [redacted] are now being used as well in similar delivery systems [redacted] wash down spray and fogging solution spray products and bear the same third party certifications and applicable standards as does the Bio-Germ Protection [redacted]

If I can be of any further assistance, please feel free in contacting me.

Sincerely,

John P. Heggers, Ph.D., BELD (AAB)
Professor Surgery (Plastic)
Microbiology & Immunology
