

Cody Outdoor Classroom

Where Learning Comes Naturally

Overviews of Life Science Lessons

Below are overviews of Cody Outdoor Classroom's life science lessons. Please note each lesson specifies the grades it is designed for. Some lessons can be tailored to include additional grades; please contact us for more information regarding this.

NGSS, MA, and NH science standards for the lessons are listed in an Appendix below the overviews.

Imitating Nature

Creating Nature-Inspired Solutions to Human Problems

Grades: Kindergarten, 1st

Biomimicry is a nature-inspired approach to solving human challenges. Scientists study wild plants and animals and try to emulate their patterns and strategies. Through observation and guided inquiry, students will explore the world of biomimicry. How might observing a turtle inspire a student to build a helmet? Might students imitate a giraffe by building a long pole to reach food that's high on a shelf? Students will design and create small models of their solutions to evaluate if we can mimic the animal world for our own advantage.

Lookin' for Life

Discovering and Observing Biodiversity in Your Schoolyard!

Grades: 2nd, 3rd

Hidden in the bushes, grasses, and trees of schoolyards are numerous plant, insect, bird, and mammal species. Through hands-on guided exploration, students explore this new frontier of biodiversity. They learn how to make scientific observations using their eyes, ears, and tools such as magnifying glasses and bug nets. Safely, they find various forms of life that exist in their schoolyard and categorize the life forms based on observable differences such as color, physical features, and behavior. Students work collaboratively to construct an argument that highlights why specific traits help animals survive in their environments.

Build-a-Plant

Exploring the Structure and Function of Plants

Grades: 4th, 5th

All plants need sun, water, and nutrients to survive and reproduce. Through experiential hands-on activities, students explore basic internal and external plant structures, evaluating how they help plants attain the resources they need to survive. Students also determine how the needs of plants and animals differ. By collaborating in small groups to create a new, unique plant to survive in an environment of their choosing, students create arguments regarding how the structures of a new plant supports its function.

Where Learning Comes Naturally

Connect the Dots

The Impact of Abiotic Factors on the Biotic World

Grades: 6th, 7th

Ecosystems are dynamic and comprised of both abiotic (living) and biotic (non-living) components. When one part of an ecosystem changes, it can have unforeseen and serious consequences on the rest of the ecosystem. Using a systems-thinking approach, students explore the nature of complex ecosystems and the cascading effects of change that can occur because of large and small abiotic forces. Through collaborative activities and group discussions, students will explore how climate change is affecting transitional forests in the North-eastern United States.

Surviving the Winter Freeze

Analyzing the Adaptations of New England Organisms

Grade: 8th

Through evolution and adaption, New England organisms, such as the Moose, have adapted to survive long, harsh winters. To explore the concepts of natural selection and adaptation, students examine how abiotic factors of an environment and specific physical and behavioral traits of an individual animal impact that animal's likelihood of survival. What traits enable a Moose to survive long, cold winters? By creating a model to describe and apply natural selection to the survival of Moose, students address how certain adaptations of a species affect the likelihood of passing on genetic traits and information to younger generations. Students use this knowledge to design a "super-animal" that is best equipped to survive a New England winter and the changes to winter that might accompany climate change.

See next page for Appendix: Science Standards.

Appendix: Science Standards

Imitating Nature

Creating Nature-Inspired Solutions to Human Problems

NGSS: K-LS1-1. Use observations to describe patterns of what plants and animals (including humans) need to survive.

NGSS: 1-LS1-1. Use materials to design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs.

MA: 1-LS1-1 Use evidence to explain that (a) different animals use their body parts and senses in different ways to see, hear, grasp objects, protect themselves, move from place to place, and seek, find, and take in food, water, and air, and (b) plants have roots, stems, leaves, flowers, and fruits that are used to take in water, air, and other nutrients, and produce food for the plant.

NH: S:LS1:2:2.1 Recognize that plants and animals have features that help them survive in different environments.

Lookin' for Life

Discovering and Observing Biodiversity in Your Backyard!

NGSS: 2-LS4-1. Make observations of plants and animals to compare the diversity of life in different habitats.

NGSS: 3-LS4-3. Construct an argument with evidence that in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all.

MA: 2-LS4-1. Use texts, media, or local environments to observe and compare (a) different kinds of living things in an area, and (b) differences in the kinds of living things living in different types of areas.

MA: 3-LS4-3. Construct an argument with evidence that in a particular environment some organisms can survive well, some survive less well, and some cannot survive.

NH: S:LS1:2:1.1 Differentiate between living and nonliving things; and categorize objects in each group using the significant observable characteristics they share, such as color, shape and size.

NH: S:LS1:2:1.2 Recognize plants and animals as living things and describe how they are alike and different.

NH: S:LS1:4:1.1 Recognize and identify the various ways in which living things can be grouped.

Cody Outdoor Classroom

Where Learning Comes Naturally

NH: S:LS1:4:1.2 Sort/classify different living things using similar and different characteristics; and describe why organisms belong to each group or cite evidence about how they are alike or not alike.

NH: S:LS5:4:2.1 Demonstrate the use of appropriate tools and simple equipment, such as thermometers, magnifiers and microscopes to gather data and extend the senses.

NH: S:SPS1:2:1.3 Ask questions about objects, organisms and events in their immediate environment.

NH: S:SPS1:2:1.5 Sort and classify object materials and events based on one or more attributes; and explain the methods used for sorting.

NH: S:SPS1:2:2.2 Suggest a plan and describe a sequence of events for conducting an exploration.

NH: S:SPS3:2:2.1 Use observation skills to describe the area around their homes and school.

Build-a-Plant

Exploring the Structure and Function of Plants

NGSS: 4-LS1-1. Construct an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction.

NGSS: 5-LS1-1. Support an argument that plants get the materials they need for growth chiefly from air and water.

MA: 4-LS1-1. Construct an argument that animals and plants have internal and external structures that support their survival, growth, behavior, and reproduction.

MA: 5-LS1-1. Ask testable questions about the process by which plants use air, water, and energy from sunlight to produce sugars and plant materials needed for growth and reproduction.

NH: S:LS1:4:2.1 Recognize that living organisms have certain structures and systems that perform specific functions, facilitating survival, growth and reproduction.

NH: S:LS1:4.2.2 Identify and describe the function of the plant structures responsible for food production, water transport, support, reproduction, growth and protection.

NH: S:LS1:4:2.3 Identify and explain how the physical structures of an organism (plants or animals) allow it to survive in its habitat/environment (e.g., roots for water; nose to smell fire).

NH: S:LS1:4:2.4 Identify the basic needs of plants and animals in order to stay alive (i.e., water, air, food, space).

NH: S:LS2:6:2.2 Recognize that one of the most general distinctions among organisms is between plants, which use sunlight to make their own food, and animals, which consume energy-rich foods.

Cody Outdoor Classroom

Where Learning Comes Naturally

NH: S:SPS2:4:2.1 Demonstrate that if something consists of many parts, the parts usually influence one another.

NH: S:SPS3:4:1.2 Communicate ideas to others.

NH: S:SPS4:4:4.3 Use evidence to construct explanations.

NH: S:SPS4:4:6.2 Engage in group decision making activities.

Connect the Dots

Impact of Abiotic Factors on the Biotic World

NGSS: MS-LS2-4. Construct an argument supported by empirical evidence that changes to physical or biological components of an ecosystem affect populations.

NGSS: MS-LS2-1. Analyze and interpret data to provide evidence for the effects of resource availability on organisms and populations of organisms in an ecosystem.

MA: 7.MS-LS2-4. Analyze data to provide evidence that disruptions (natural or human-made) to any physical or biological component of an ecosystem can lead to shifts in all its populations.

NH: S:LS2:6:3.2 Using food webs, identify and describe the ways in which organisms interact and depend on one another in an ecosystem.

NH: S:LS3:6:1.2 Explain how changes in environmental conditions can affect the survival of individual organisms and the entire species.

NH: S:LS1:8:2.2 Define a population and describe the factors that can affect it.

NH: S:LS2:8:1.1 Explain how changes in environmental conditions can affect the survival of individual organisms and an entire species.

NH: S:LS2:8:1.3 Using data and observations, predict outcomes when abiotic/biotic factors are changed in an ecosystem.

NH: S:LS3:8:1.1 Describe the type of impact certain environmental changes, including deforestation, invasive species, increased erosion, and pollution containing toxic substances, could have on local environments.

NH: S:SPS1:6:1.8 Ask questions about relationships between and among observations.

NH: S:SPS1:6:4.4 Identify patterns and relationships in data and formulate basic explanations.

NH: S:SPS2:6:1.2 Describe how results of similar and repeated investigations may vary and suggest possible explanations for variations.

NH: S:SPS2:6:2.1 Recognize that thinking about things as systems means looking for how every part relates to others.

NH: S:SPS2:6:2.3 Estimate or predict the effect that making a change in one part of the system will have on other parts, and on the system as a whole.

Cody Outdoor Classroom

Where Learning Comes Naturally

Surviving the Winter Freeze

Analyzing the Adaptations of New England Organisms

NGSS: MS-LS4-4. Construct an explanation based on evidence that describes how genetic variations of traits in a population increase some individuals' probability of surviving and reproducing in a specific environment.

MA: 8.MS-LS4-4. Use a model to describe the process of natural selection, in which genetic variations of some traits in a population increase some individuals' likelihood of surviving and reproducing in a changing environment. Provide evidence that natural selection occurs over many generations.

NH: S:LS3:8:3.3 Explain how individual organisms with certain traits are more likely than others to survive and have offspring.

NH: S:LS3:8:3.5 Cite examples supporting the concept that certain traits of organisms may provide a survival advantage in a specific environment and therefore, an increased likelihood to produce offspring.

NH: S:SPS2:8:1.3 Realize that knowledge, based on science, is subject to modification as new information challenges prevailing theories and as a new theory leads to looking at old observations in a new way.

NH: S:SPS2:8:3.2 Know that different models can be used to represent the same thing; what kind of model is used and how complex it should be depends on its purpose; and the usefulness of a model is one of the instances in which intuition and creativity come into play in science, mathematics and engineering.

NH: S:SPS3:8:1.1 Work effectively within a cooperative group setting, accepting and executing assigned roles and responsibilities.
