

Champion positive health outcomes and behaviors through innovative programs and community engagement

Respiratory Disease Surveillance Report Jefferson County, Missouri

Week 16: April 17, 2022 – April 23, 2022

OVERVIEW: The Jefferson County Health Department (JCHD) monitors influenza and other respiratory pathogens, including COVID-19, throughout Jefferson County, Missouri. The Jefferson County Health Department conducts influenza surveillance using passive surveillance and syndromic surveillance. Although influenza illness can occur year-round, the seasonal influenza reporting begins on the Morbidity and Mortality Weekly Report (MMWR¹) Week 40 of a given year and continues through MMWR Week 20 of the following calendar year. COVID-19 surveillance began in March 2020 and has been ongoing. COVID-19 data reflects cases that are entered into Missouri's communicable disease database. Vaccination data for COVID-19 is reported to the Jefferson County Health Department weekly by the Missouri Department of Health and Senior Services (MO DHSS). *All data and information are conditional and may change as more reports are received*.

¹ Data is reported in epidemiologic weeks established by the CDC's Morbidity and Mortality Weekly Report (MMWR). The MMWR week starts on a Sunday and ends on Saturday. Values for MMWR week range from 1 to 53, although most years consist of 52 weeks.

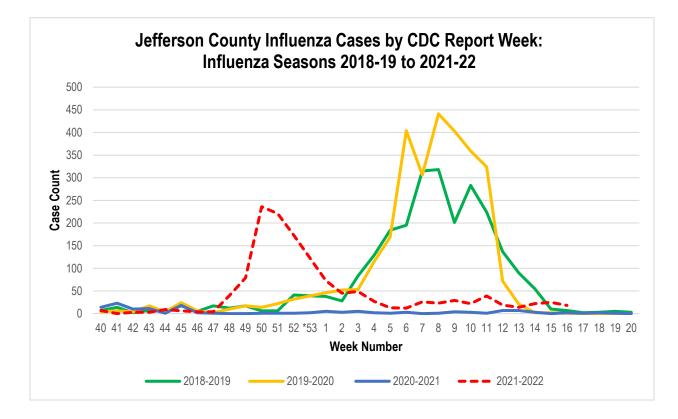

Figure 2. Number of Laboratory-positive Influenza Cases by Week, Influenza Seasons 2018-19 to 2021-22, Jefferson County, Missouri

*There were 53 weeks in 2020. The estimates for the other three years' values for the weeks 53 are the averages of weeks 52 and weeks 1.

Syndromic Surveillance

As determined by ESSENCE, Influenza-Like-Illness (ILI³) accounted for 0% to 1.04% of daily visits to hospital emergency departments (EDs) for Jefferson County residents during Week 16. The number of visits to local hospital EDs for ILI ranged from zero to two per day during Week 16.

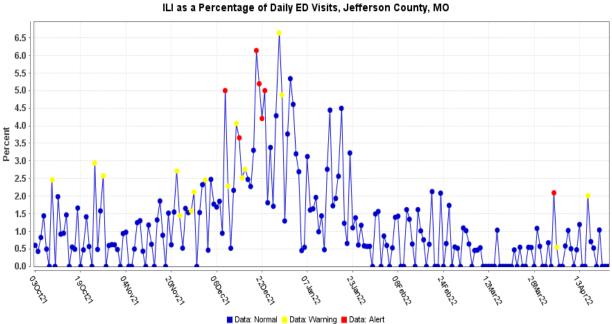

Figure 3. Syndromic Surveillance for Influenza-Like-Illness (ILI) Jefferson County, Missouri

Jefferson County Influenza Outbreaks

No influenza outbreaks have been reported in Jefferson County as of Week 16.

Jefferson County Influenza Deaths⁴

Three influenza-associated deaths have been reported in Jefferson County as of Week 16.

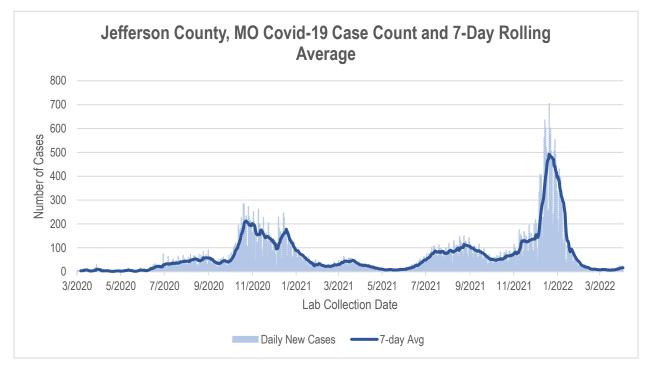

³ ILI is defined by ESSENCE as Emergency Department chief complaints for Influenza or (FeverPlus and (Cough or SoreThroat) and not NonILIFevers).

⁴ All influenza-associated deaths became reportable in Missouri in 2016.

COVID-19 SURVEILLANCE

From 4/16/22 to 4/23/22, the average number of new COVID-19 cases diagnosed among Jefferson County residents increased by 46.73 percent from 11.00 to 16.14 cases per day. The current rate of weekly COVID-19 diagnoses (50.22 cases per 100,000 residents per week) is substantial.

During Week 16, one Covid-19 associated death was reported in Jefferson County. A cumulative total of 543 Covid-19 associated deaths have been reported in Jefferson County as of Week 16.

| Age Range: | Fatalities | Rate Per 100 |
|------------|------------|--------------|
| 0-9 | 0 | 0.0 |
| 10-19 | 0 | 0.0 |

Passive Surveillance

Influenza is a reportable condition in the state of Missouri. JCHD conducts passive influenza surveillance by collecting and aggregating data on all laboratory-positive influenza tests in Jefferson County residents. Passive surveillance provides information on the true burden of influenza illness in Jefferson County but is limited by variations in testing and reporting practices. If diagnostic tests are not conducted on patients presenting to health care providers with influenza-like-illness, or if test results (e.g., of rapid influenza tests) are not reported to JCHD, those persons will not be included in the passive surveillance data. Thus, passive surveillance is likely an underestimate of the true burden of influenza illness in Jefferson County. Passive surveillance helps the health department to keep track of the incidence of influenza cases in the community and facilitates early detection of potential outbreaks.

Syndromic Surveillance

JCHD uses the ESSENCE system to conduct syndromic surveillance for Influenza-Like-Illness (ILI) at Missouri hospital emergency departments (EDs). ESSENCE captures data on all ED visits in persons with chief complaints (rather than final diagnoses or positive laboratory tests) of ILI. ILI chief complaints are those which include the word "influenza" or those that the ESSENCE system parses to [fever and (cough or sore throat)]. The syndromic surveillance data presented above include all ED visits for ILI from those with a Jefferson County residential address. Data from private physicians, clinics, or urgent care centers are not included in ESSENCE. Syndromic surveillance contributes to our understanding of the burden of influenza experienced by the health care system, as well as demonstrating the relative impact over time of influenza with respect to other illnesses.
