Working closely with major offshore companies, RES has produced innovative process design for challenging FPSO applications including production of fuels and chemicals from offshore gas fields.

RES integrates process technology components from leading licensors including Davy Process Technology, UOP, Linde and KOGAS, to produce a plant design that best meets project economic and operational targets.

RES has performed a wide range of projects for FPSO, from economic and technology feasibility studies to engineering designs, from conceptual design to FEED.

RES, ready to meet your top side process engineering needs in FPSO applications.
