Mauka Marketplace is the world’s first global e-commerce marketplace optimized to direct its profits towards bioregional projects and initiatives working to restore and regenerate the damage that has been done to our planetary life support systems. Amazon revolutionized the way we move goods & services, but continues to perpetuate a global paradigm of resource extraction and exploitation of people. Mauka Marketplace will direct global revenues into local artisans’ pockets, and invest profits into bioregional projects working towards social-ecological restoration at scale.

We can grow a global marketplace that is explicitly designed to create economic drivers for ecosystem restoration.

The Marketplace

Create
Crafts, furniture and unique goods curated to support local artisans and the conscious consumer.

Dwell
Experience waking up in a handcrafted wood structure rooted in sustainable practices.

Nourish
Support local farmers and ecosystems, while giving your body the nutrients it needs.

Surf
Catch the next swell on a board that uses no toxic materials and is made with 100% invasive wood.

Facts

- Profits are invested in projects & initiatives that are working to restore socio-ecological systems.
- Your purchase directly supports artisans & craftsmen who have committed to ethical sourcing of their materials.
- Tracking & reporting our socio-ecological impact ensures accountability to our mission.
- Artisans make products from local and responsibly sourced materials such as invasive trees.
- Tracking & reporting our socio-ecological impact ensures accountability to our mission.
- NRDS helps us to measure our impact on socio-ecological systems. Our primary metrics for success are trees planted and dollars directly invested into communities.

Ecosystem Disrupted

Invasive Species Utilization
Albizia, Mangrove, etc.

Ecosystem Restored

Regenerative Species

Food Artisans

Supporting Local Artisans

Tracking Regeneration

Native Forest Restoration
Working with community organizations restoring native ecosystems at Waikēakua pond in Mānoa valley.

Promoting the use of invasive wood, such as Albizia.
