The center of our working farm for over 100 years. The landscapers in the 1950s. It was buried, according to legend, to hide the old and fragile tree. Darwin’s theory of evolution to this nation. Please do not climb on this very century.

The enormous Copper Beech on the back lawn was a gift to the Manor from Asa Gray in the mid-1900s. Gray, called “the father of American botany,” wrote the first standard textbook on the subject and introduced Darwin’s theory of evolution to this nation. Please do not climb on this very old and fragile tree.

The 17th-century English maritime Cannon was unearthed by landscapers in the 1950s. It was buried, according to legend, to hide the manor’s British ties from Dutch soldiers who circled the house in 1674 during the 3rd Anglo-Dutch War.

The Long Barn and Small Barn contain the Manor’s woodshop, field office, tool storage supply depot and storage space. This area has been the center of our working farm for over 100 years.
