

SUPPORTING SOURCES AND STATISTICS (as of 7 September 2023)

Redress, the Hong Kong-headquartered, Asia-focused environmental NGO accelerating the change to a circular fashion industry, is pleased to provide the following selection of statistics and reports to support the understanding of the issues and solutions underpinning Redress and the Redress Design Award's work. This document is intended as a general aid. For further information, please contact Shirley Aun, Communications Manager, at shirleyaun@redress.com.hk

THE FASHION INDUSTRY'S VARIOUS IMPACTS AT A GLANCE

Economic: The fashion industry globally is an estimated \$2.5 trillion annual business, or approximately 3% of global GDP¹

Environmental impact at global level:

- **Carbon** The fashion industry contributes to 10% of global greenhouse gas emissions. The industry consumes more energy than the aviation and shipping industry combined.² The fashion industry is projected to use 26% of the world's carbon budget by 2050³
- **Water:** 17 to 20% of industrial water pollution comes from from textile dyeing and treatment⁴
- **Waste** Every second, the equivalent of one rubbish truck of textiles is landfilled or burned⁵

Social: 1 in 6 people are believed to work in some part of the apparel industry⁶

THE PROBLEM: FASHION'S LINEAR SYSTEM CONTRIBUTES TO TEXTILE AND CLOTHING WASTE AND THIS IS SET TO WORSEN

Current textile and clothing waste rates

- Every second, the equivalent of one rubbish truck of textiles is landfilled or burned⁷
- An estimated 92 million tons of textile waste is created annually from the fashion industry⁸
- In Hong Kong, an average daily quantity of 404 tonnes of textiles were landfilled in 2021 (from domestic and commercial/industry)

Textile waste is not effectively re-used or recycled

- Of the total fibre input used for clothing, 87% is landfilled or incinerated, representing a lost opportunity of more than USD 100 billion annually⁹

Fashion consumption and waste rates are increasing

⁸ Business of Fashion and McKinsey & Company, The State of Fashion 2020, New York, 2019

⁹ Ellen MacArthur Foundation (2017), A New Textiles Economy: Redesigning Fashion's Future

- Around 100 billion apparel items are sold per year, approximately doubling from 2006, and the majority of this clothing is landfilled or burned within one year of production¹⁰
- Global apparel, footwear consumption may rise by 63% in 2030¹¹
- Textile waste is estimated to increase by about 60% between 2015 and 2030, with an additional 57 million tons of waste being generated annually, reaching an annual total of 148 million tons, which is equivalent to annual waste of 17.5kg per capita across the planet¹²

Asia has particular waste crisis

- Greater China was expected to overtake the US as the largest fashion market in the world in 2019¹³
- Between 2015-2022 the world's largest clothing exporters by value remain China, European Union, Bangladesh, Turkey, Vietnam, India¹⁴
- Asia accounts for some 60% of global exports of garments, textiles and footwear¹⁵

THE SOLUTION: WE NEED TO MOVE TO A CIRCULAR FASHION SYSTEM – BUT WE ARE FAR FROM ACHIEVING THIS

Circular economies are not well developed

- The global economy is only 7.2% circular¹⁶
- When it comes to the fashion industry, less than 1% of material used to produce clothing is recycled into new clothing¹⁷

Benefits of circular economy:

- **Environmental** Circular business models could reduce GHG emissions by approximately 25 %. Every 1% increase in market share, circular business models can reduce emissions by 13 million tons¹⁸
- **Economic:** Four business models (resale, rental, repair, and remaking) – all of which have the potential to decouple revenue streams from production and resource use – currently represent a \$73 billion market. Collectively, they have the potential to grow from 3.5% of the global fashion market today to 23% by 2030, representing a \$700 billion opportunity¹⁹
- **Social:** International Labour Organisation estimates that transitioning towards a circular economy across all sectors around the world could create a net total of 6 million new jobs by 2030, compared to a business-as-usual scenario²⁰

***Select* factors needed to transition towards a circular economy include the need to:**

- Educate and empower designers

¹⁹ Ellen MacArthur Foundation (2021) Circular Business Models - Redefining Growth for a Thriving Fashion Industry

²⁰ International Labour Organization (2018). World Employment Social Outlook 2018: Greening with Jobs

- It is estimated that 80% of a product's environmental impact is determined at the design stage²¹
- **Involve more fashion stakeholders:**
 - 12.5% of the global fashion industry has committed to circularity. Since its launch at the Copenhagen Fashion Summit 2017, 90 companies, representing 12.5% of the global fashion market, have signed and committed to focus on four key areas of circular fashion: design, collection, reuse and recycling²²
- **Increase investment:** Developments in the circular economy are too slow with lack of investment identified. In order to disrupt and scale new business models and innovations, a yield of \$20 billion to \$30 billion in financing per year is needed to capitalise on sustainability by 2030²³

CONSUMERS EXPECT BETTER PRACTICES – MORE CONSUMER ACTION NEEDED

Consumers expect better

- 98% of consumers think brands have a responsibility to make positive change in the world²⁴
- 71% of consumers are indicating a shift towards investments in higher quality garments and a deepened interest in circular business models such as resale, rental or refurbishment²⁵

Consumers not willing to pay more for sustainability

- 71% of global consumers are concerned about sustainability in fashion, only 3% of them are willing to pay a premium for it²⁶

Greenwashing concerns remain amongst consumers

- 79% of global Gen Z consumers and 66% of Millennials said they had the perception that brands are never honest, or not honest enough about how environmentally friendly their products are²⁷
- Following a screening of websites, the European Commission revealed that national consumer protection authorities had reason to believe that in 42 % of cases of companies making “green” claims, the claims were ‘exaggerated, false or deceptive’²⁸

NO COMPREHENSIVE GOVERNMENT LEGISLATION FOR CIRCULARITY – ONLY SELECT LEGISLATION COMING ONTO THE HORIZON

- France: 2020 New anti-waste law enacted, banning of incineration of unsold clothing inventory, requiring manufacturers, distributors, and stores to donate or recycle²⁹
- China aims to recycle 25 % of all its textile waste and wants to produce 2 million metric tons of recycled fibre annually by 2025³⁰
