

SUPPORTING SOURCES AND STATISTICS (as of 9 May 2024)

Redress, the Hong Kong-based, Asia-focused environmental NGO accelerating the change to a circular fashion industry, is pleased to provide as a general aid the following selection of statistics and reports to support understanding of the issues and solutions underpinning Redress' work. For further information, please contact Shirley A. Wong, Communications Manager, at shirleyaun@redress.com.hk.

THE FASHION INDUSTRY'S VARIOUS IMPACTS AT A GLANCE

Economic: The fashion industry globally is an estimated \$2.5 trillion annual business¹, or approximately 2 to 2.5% of global GDP².

Environmental impact at global level

- **Carbon:** The fashion industry contributed to an estimated 4% of global greenhouse gas emissions.³ The fashion industry is projected to use a quarter of the world's carbon budget by 2050.⁴
- **Water:** The volume of freshwater consumed by the fashion industry is nearly 79 billion cubic metres, enough to fill nearly 32 million Olympic-size swimming pools. This figure is predicted to increase by 50% by 2030.⁵
- **Waste:** Every second, the equivalent of one rubbish truck of textiles is landfilled or burned.⁶

Social: 1 in 8 people are believed to work in some part of the apparel industry.⁷

THE PROBLEM: FASHION'S LINEAR SYSTEM CONTRIBUTES TO TEXTILE AND CLOTHING WASTE AND THIS IS SET TO WORSEN

Current textile and clothing waste rates

- Every second, the equivalent of one rubbish truck of textiles is landfilled or burned.⁸
- An estimated 92 million tons of textile waste is created annually from the fashion industry.⁹
- In Hong Kong, an average daily quantity of 388 tonnes of textiles were landfilled in 2022¹⁰, of which 50% is estimated to be clothing. This is the equivalent of 16 T-shirts landfilled every second.

¹⁰ Environmental Protection Department, HKSAR. 2023. Monitoring of Solid Waste in Hong Kong: Waste Statistics for 2022

Textile waste is not effectively re-used or recycled

- Of the total fibre input used for clothing, 87% is landfilled or incinerated, representing a lost opportunity of more than USD 100 billion annually.¹¹

Fashion consumption and waste rates are increasing

- It is estimated that more than half of fast fashion produced is disposed of in under a year.¹²
- Global apparel, footwear consumption may rise by 63% in 2030.¹³
- Textile waste is estimated to increase by about 60% between 2015 and 2030, with an additional 57 million tons of waste being generated annually, reaching an annual total of 148 million tons, which is equivalent to annual waste of 17.5kg per capita across the planet.¹⁴

Asia has particular waste crisis

- Greater China was expected to overtake the US as the largest fashion market in the world in 2019.¹⁵
- Between 2015-2022 the world's largest clothing exporters by value remain China, European Union, Bangladesh, Turkey, Vietnam, India.¹⁶
- Asia accounts for some 60% of global exports of garments and textiles.¹⁷

THE SOLUTION: WE NEED TO MOVE TO A CIRCULAR FASHION SYSTEM – BUT WE ARE FAR FROM ACHIEVING THIS

Circular economies are not well developed

- The global economy is only 7.2% circular.¹⁸
- When it comes to the fashion industry, less than 1% of material used to produce clothing is recycled into new clothing.¹⁹

Benefits of circular economy:

- **Environmental:** As an example, a comprehensive circular economy approach for the plastic sector has the potential to reduce [...] greenhouse gas emissions by 25%.²⁰ Every 1% increase in market share, circular business models can reduce emissions by 13 million tons.²¹
- **Economic:** Four business models (resale, rental, repair, and remaking) – all of which have the potential to decouple revenue streams from production and resource use – currently represent a \$73 billion market. Collectively, they have the potential to grow from 3.5% of the global fashion market today to 23% by 2030, representing a \$700 billion opportunity.²²

²² Ellen MacArthur Foundation (2021) Circular Business Models - Redefining Growth for a Thriving Fashion Industry

- **Social:** International Labour Organisation estimates that transitioning towards a circular economy across all sectors around the world could create a net total of between 7 and 8 million new jobs by 2030, compared to a business-as-usual scenario.²³

***Select* factors needed to transition towards a circular economy include the need to:**

- Educate and empower designers
 - Around 80% of a product's environmental impact is locked in at design stage.²⁴
- **Involve more fashion stakeholders:**
 - 12.5% of the global fashion industry has committed to circularity. Since its launch at the Copenhagen Fashion Summit 2017, 94 companies, representing 12.5% of the global fashion market, have signed and committed to focus on four key areas of circular fashion: design, collection, reuse and recycling.²⁵
- **Increase investment:** Developments in the circular economy are too slow with lack of investment identified. In order to disrupt and scale new business models and innovations, a yield of \$20 billion to \$30 billion in financing per year is needed to capitalise on sustainability by 2030.²⁶

CONSUMERS EXPECT BETTER PRACTICES – MORE CONSUMER ACTION NEEDED

Consumers expect better

- 98% of consumers think brands have a responsibility to make positive change in the world.²⁷
- 71% of consumers are indicating a shift towards investments in higher quality garments and a deepened interest in circular business models such as resale, rental or refurbishment.²⁸

Consumers not willing to pay more for sustainability

- 71% of global consumers are concerned about sustainability in fashion, only 3% of them are willing to pay a premium for it.²⁹

Greenwashing concerns remain amongst consumers

- 79% of global Gen Z consumers and 66% of Millennials said they had the perception that brands are never honest, or not honest enough about how sustainable their products are, nor willing to pay a premium for it.³⁰
- Following a screening of websites, the European Commission revealed that national consumer protection authorities had reason to believe that in 42% of cases of companies making 'green' claims, the claims were 'exaggerated, false or deceptive'.³¹

NO COMPREHENSIVE GOVERNMENT LEGISLATION FOR CIRCULARITY – ONLY SELECT LEGISLATION COMING ONTO THE HORIZON

- France: 2020 New anti-waste law enacted, banning incineration of unsold clothing inventory, and requiring manufacturers, distributors, and stores to donate or recycle.³²
- China aims to recycle a quarter of all its textile waste and wants to produce 2 million metric tons of recycled fibre annually by 2025. By 2030, aims to be able to recycle 30 percent of its textile waste and produce 3 million tons of recycled fibre annually.³³
- European Union ‘Strategy for Sustainable and Circular Textiles’ in consultation with the goal that by 2030 textile products placed on the EU market are long-lived and recyclable, to a great extent made of recycled fibres, free of hazardous substances and produced in respect of social rights and the environment.³⁴
