Introduction: Learning to Dream
Hopeful Science Fiction: Saving the World One Story at a Time

- “I think science fiction helps us think about possibilities, to speculate - it helps us look at our society from a different perspective. It lets us look at our mores, using science as the backdrop, as the game changer.” (Mae Jemison, astronaut)

- “Science fiction [is] useful because it reframes our perspective on the world. That’s why … companies like Google, Microsoft, and Apple have brought in science fiction writers as consultants. Exploring fictional futures frees our thinking from false constraints…. It forces us to recognize that sometimes imagination is more important than analysis.” (Eliot Peper, Harvard Business Review)

- “[Cixin Liu’s The Three Body Problem] was fun to read, partly because [it made] my day-to-day problems with Congress seem fairly petty—[after all], aliens are about to invade!” (Barack Obama, US President)

- “[Scientific theories] are science fiction in the best sense: they are visions and anticipations, by which we seek to attain true knowledge.” (Pope Benedict VXI)
AI: Artificial Intelligence

“Hey, Siri”

MIDJOURNEY

FOR BEGINNERS

IBM Watson
