

What is the potential of RegTech for Regulators?

Limited capacity to validate and analyze data, inadequate monitoring tools and insufficient customer insights make financial regulation and supervision rigid, unresponsive to market dynamics and unwelcoming for innovative business models. RegTech equips financial authorities with 21st century tools to master the FinTech era.

FROM

Excel sheets flooding into central banks and raw data outsize file size limits, thwarting risk-based supervision and proportional regulation.

TO

Supervisors and regulators leveraging APIs, artificial intelligence, cloud computing, data analytics and dashboards to leverage new dynamic data sets.

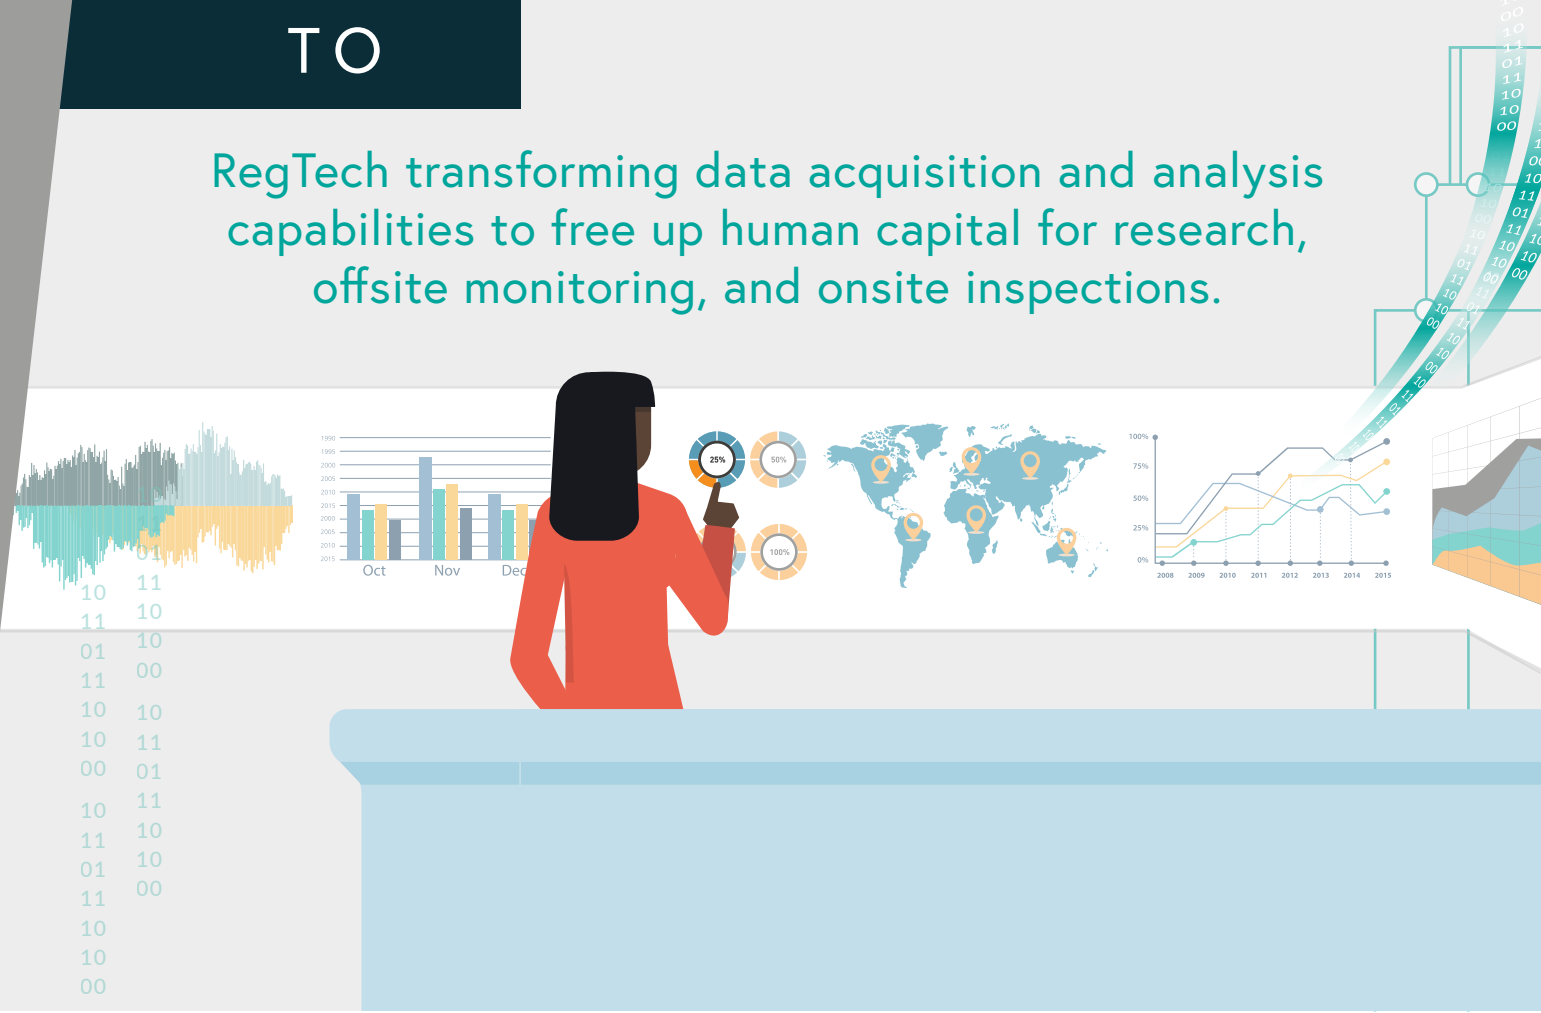

FROM

Product innovation and new channels in digital-first financial markets requiring constant renewal to technology acumen.

TO

RegTech transforming data acquisition and analysis capabilities to free up human capital for research, offsite monitoring, and onsite inspections.

FROM

Few recourse mechanisms and limited insights on customer behaviors and needs restricting consumer protection.

TO

Central bankers mining geo-tagged transactional data, analyzing complaints and social media to provide recourse and understand what drives financial inclusion.

The RegTech for Regulators Accelerator (R²A) partners with leading financial sector authorities and innovators to pioneer the next generation of tools and techniques for market supervision and policy analysis.

PHILIPPINES

Chatbot and customer management system for customer complaints.

An API and back office reporting and visualization application.

MEXICO

New data infrastructure for anti-money laundering supervision.
