## Benefits

- **Improve visibility:** Measure, analyze and report cybersecurity from a single pane of glass.
  - **Improve scores:** If you have received a cybersecurity rating, CyberStrong™ will define a path and steps to improve your rating.
  - **Provide measurement:** If you have not received a rating, CyberStrong™ scores your posture in an intuitive, easy to understand way.
  - **Improve communication:** Unlock and empower internal resources with a shared plan of action.
  - **Information sharing:** Generate simple reports for executive teams, boards of directors, auditors, and external constituents.
  - **Provide reports:** Standardize and automate routine customer and partner requests for information.
  - **Improve cyber resiliency:** Be proactive, not reactive. Rapidly identify, respond, and recover from cyber exposures.
  - **Save time and money:** Optimize your cyber program and return on investment with our cognitive recommendations.
- 

## Rapid Scorecard Service

"If you cannot measure it, you cannot improve it."—Lord Kelvin

### Manage Cyber Like a Business Function

Our scorecard service is based on the NIST Cybersecurity Framework (CSF), created by the U.S. Dept. of Commerce led National Institute of Standards and Technology (NIST)\*. The new national cybersecurity framework is the most comprehensive set of cybersecurity controls available, crafted by over 3,000 industry professionals. It contains over 900 controls and is fully translatable to ISO:27000, PCI-DSS, and other major cybersecurity standards.

The Cybersecurity Framework is especially good for the management of cybersecurity programs, as it is based on a continuous improvement cycle.

Gartner predicts that over 50% of companies will adopt the Cybersecurity Framework by 2020. Other recent studies show that over 70% of companies are adopting or plan to adopt the framework. Not only will firms adopt the framework organically, many of their customers and partners will demand evidence of framework adoption.

It is likely that the NIST Cybersecurity Framework will become the *de facto* standard for demonstrated due care, as the Executive Order stipulates for U.S. regulatory evaluation. The NIST Cybersecurity Framework also calls for the U.S. Department of Homeland Security (DHS) to establish incentives to promote adoption.

From a purely private sector perspective, many companies that have accepted or plan to petition for U.S. Government funds or are engaged with state government, are today being required to demonstrate their NIST based cybersecurity posture as an ongoing requirement. This includes research, education and future RFP responses.
