

Benefits

- **Improve visibility:** Measure, analyze and report cybersecurity from a single pane of glass.
 - **Improve scores:** If you have received a cybersecurity rating, CyberStrong™ will define a path and steps to improve your rating.
 - **Provide measurement:** If you have not received a rating, CyberStrong™ scores your posture in an intuitive, easy to understand way.
 - **Improve communication:** Unlock and empower internal resources with a shared plan of action.
 - **Information sharing:** Generate simple reports for executive teams, boards of directors, auditors, and external constituents.
 - **Provide reports:** Standardize and automate routine customer and partner requests for information.
 - **Improve cyber resiliency:** Be proactive, not reactive. Rapidly identify, respond, and recover from cyber exposures.
 - **Save time and money:** Optimize your cyber program and return on investment with our cognitive recommendations.

CyberStrong™ Solution

"If you cannot measure it, you cannot improve it."—Lord Kelvin

Manage Cyber Like a Business Function

CyberStrong™ puts your cyber program on a solid foundation. Cybersecurity can be costly, arduous, and even chaotic. Many firms do not have visibility into their cyber posture. It's time to uncomplicate cybersecurity. CyberStrong ends the chaos by quickly establishing your organization's baseline. We deliver a simple scorecard that provides measurable results to share with all your stakeholders, including top level management. Measurement is critical for guiding resource requests for the year, saving time and money.

There are point solutions that report on the threat environment, but few that do so for the internal security posture of organizations. That approach is analogous to reading health statistics while skipping out on checkups. To be effective, monitoring and measurement need to be coupled.

CyberStrong is powered by people, breakthrough cognitive computing, and cutting edge Artificial Intelligence. Our platform enables continuous improvement and real-time measurement, which allows your organization to manage cybersecurity as you would any other business function.

Cybersaint's solutions streamline the compliance process, increase visibility, and add clear metrics. The result is a more efficient process, and simplified reports that don't require an advanced degree in computer science to understand. This yields safer systems and increased cyber resiliency.

Cybersaint is poised to provide tremendous value as organizations migrate away from a point solution approach toward viewing cybersecurity as an ongoing, adaptive process that involves everyone in the company.

We don't sell scores. We improve them.
