

APPLICATION PORTAL

USER GUIDE
www.Softtools.net

USER GUIDE OVERVIEW

- A. User Log-in
- B. Navigation
- C. App Launchpad
- D. List Reports
- E. Data Input
- F. Charts & Dashboards
- G. System Admin & App Studio
- H. Extras

USER LOG-IN

XXXX.on.softtools.net

FIRST TIME LOG-IN

Use a modern browser (Chrome, Edge, Safari) to access the URL: xxxx.on.Softtools.net

Update to latest browser version if asked

- + Go to Sign-up page and enter details
- + Go to your email and confirm your account (check spam)
- + Bookmark the page / add to mobile homepage

The image shows a smartphone screen with a 'Sign Up' form. The form has a title 'Sign Up' and two tabs: 'Log In' and 'Sign Up'. Below the tabs are several input fields: 'yours@example.com', 'andy', a password field with dots, 'your first name', 'your last name', 'your company', 'your mobile phone', and 'your code'. At the bottom of the form is a 'SIGN UP >' button. A large orange circle is overlaid on the right side of the screen, containing text that explains the fields.

- Use Sign-up for setting up your account
- Your company email address
- Your user name – 8 characters & no spaces
- Your password – don't forget it!
- Your first name
- Your last or family name
- Your company
- Your mobile number
- Use the code given to you

LANDING PAGE

KEY POINTS

“Softools is a web platform that allows simple and complex apps to be built and deployed in hours with zero code”

- + Softools runs in a secure and scalable cloud
- + Security determines what records you can see
- + Permissions will determine what you can do
- + New sites set up in minutes
- + The platform runs on any device
- + Apps run online & offline

SCREENSHOT

SYSTEM NAVIGATION – OVERVIEW

KEY POINTS

'Hamburger' opens and closes the menu

Launchpad gives quick access to apps

Home takes you back to the landing page

Ellipsis menu gives access to screen-specific features

Cogs menu gives access to common features

Bell icon shows notifications

SCREENSHOT

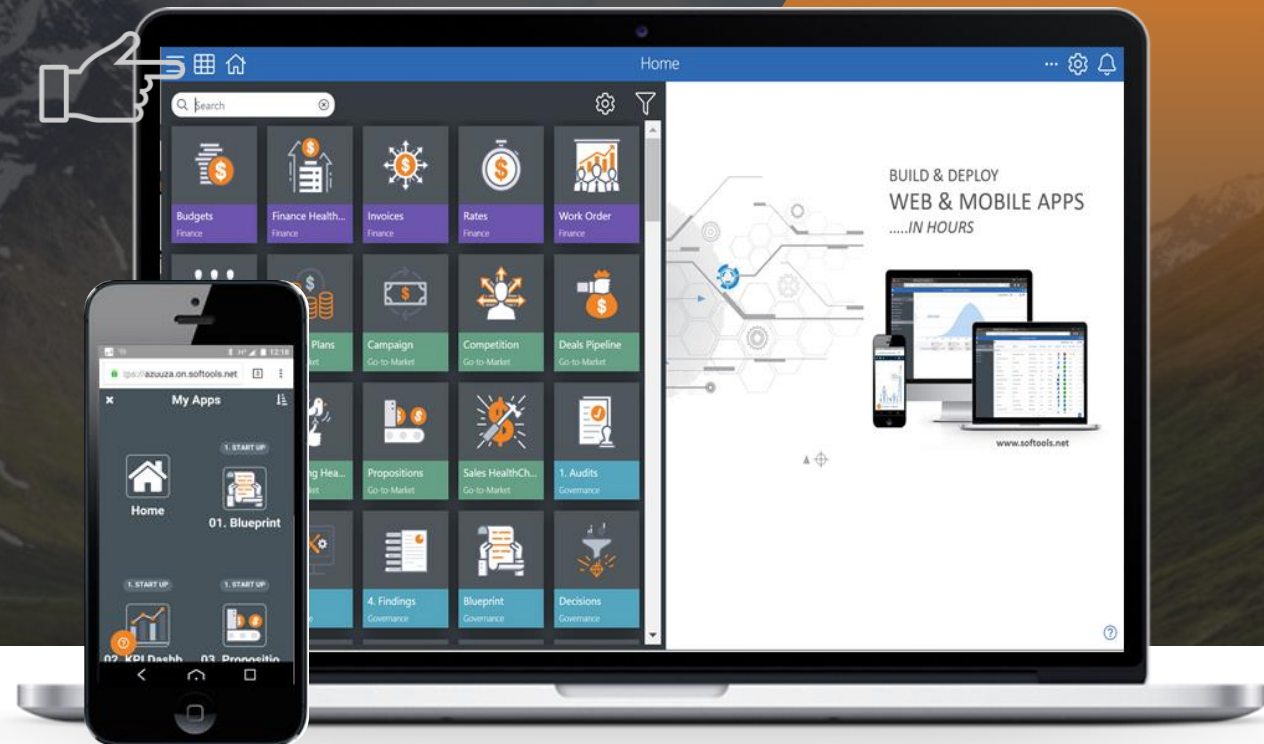

APP LAUNCHPAD

KEY POINTS

- + The Launchpad provides Quick access to your apps
- + Hover over each App icon for a description
- + Click on the App icon to launch the app
- + Note: Other apps are available on request

SCREENSHOT

APP BUILDING BLOCKS

FIELDS

Capture data either via direct manual input (keyboard or voice), via csv import / export routines or via automatic system routines using APIs.

Fields vary depending on the type of data being captured – a full list is at the back of this pack

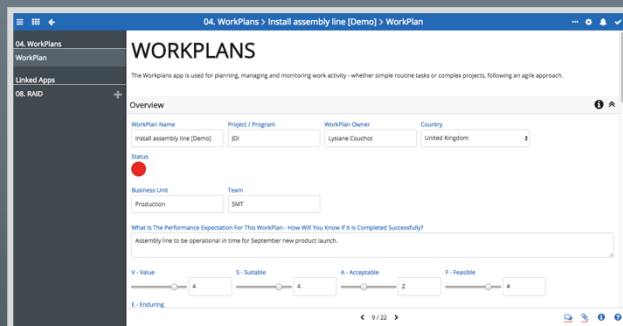

TEMPLATES

Group the data input Fields in a logical and user-friendly layout. These contain Help that guides users through the app

FORMS

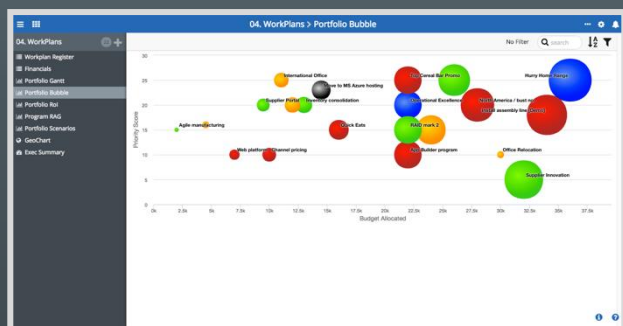

Complex apps use multiple Forms to group Templates into a logical flow that reflects the business process

APP BUILDING BLOCKS

RECORDS – DATA IN

Forms are filled in by Users and each one becomes a **Record**. A Record is the generic name for a single instance of any App – whether it be a Project, a Risk or perhaps a Deal.

REPORTS & CHARTS – DATA OUT

Data from multiple Records is then used to generate elegant **Reports** which gives an overview of the portfolio of records or performance.

APPS

All of these parts as a whole then become **Apps!**

REPORT LIST OF RECORDS

KEY POINTS

- + 1. Open an App by clicking on the icon in the Launchpad
- + Most apps will have a 'List Report' showing a register of records for the app
- + This is a standard view of your data and is used for accessing records and reviewing performance
- + Click on a row to go into the record

SCREENSHOT

<input type="checkbox"/> Channel pricing	New Product Development	01/02/2015	27/07/2015	100%	Red	Manufacturing
<input type="checkbox"/> Supplier Innovation	New Product Development	01/04/2015	17/09/2015	100%	Green	Production

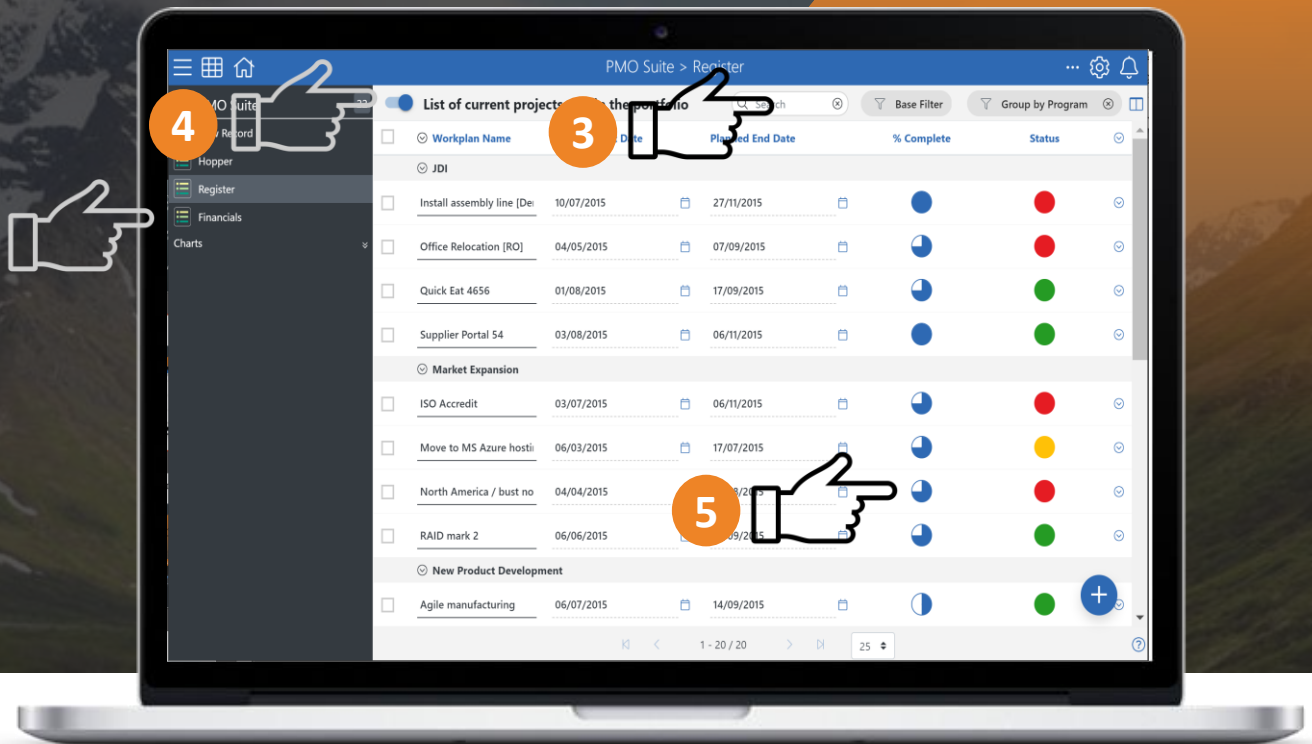

REPORTS QUICK DATA INPUT

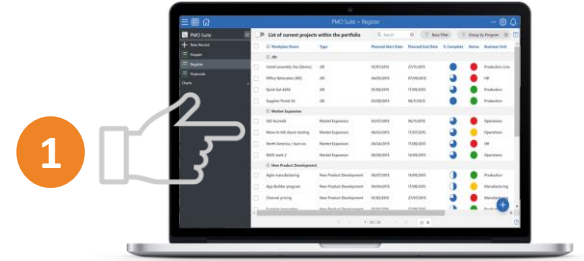

KEY POINTS

- + 1. Open an App in your Launchpad
- + 2. Click on any list report by selecting the menu item
- + 3. Use the Filter or Search field to show only the records you want to edit
- + 4. Click on the button at the top left of the report to make the report 'editable'
- + 5. Update the values directly on this screen without opening any of the records

SCREENSHOT

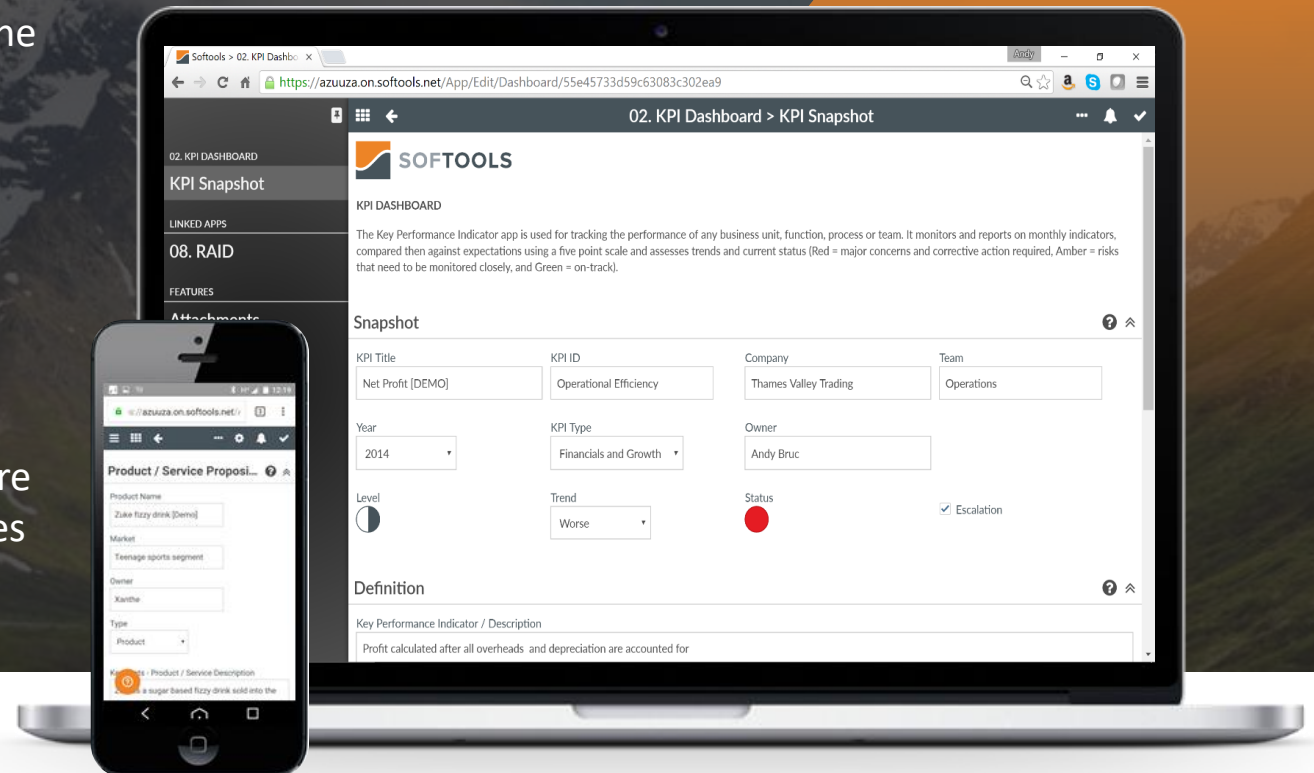

RECORDS DATA INPUT

KEY POINTS

- + 1. Open any record by clicking on the correct line in the list report
- + Data input fields are laid out in Templates & Forms in a logical flow to reflect the business process
- + Input fields will accept input in any language
- + Enter data manually, via csv import or via APIs
- + Note some fields will be locked because they are read-only or contain an expression where values are calculated automatically

SCREENSHOT

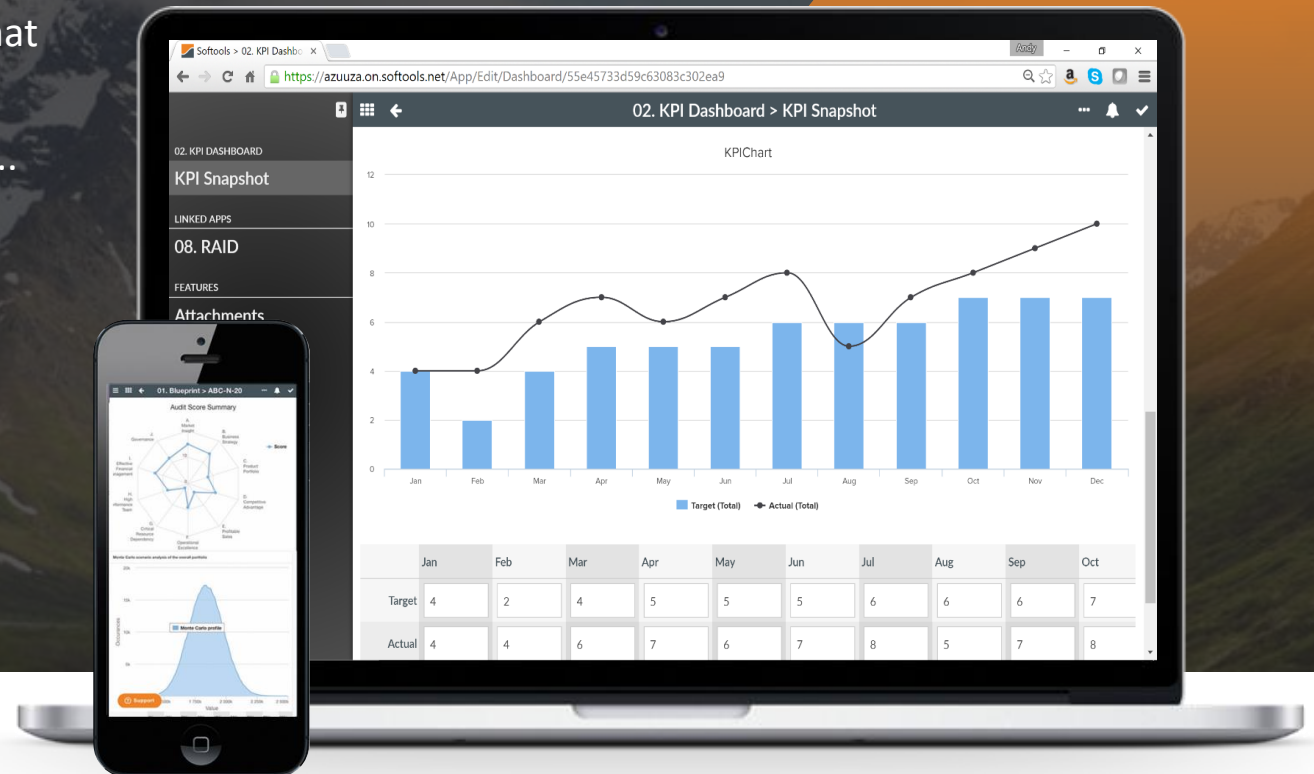

RECORDS IN-APP CHARTS

KEY POINTS

- + Charts are views of the data in a graphical format
- + There are many chart types including: bar, column, line, spline, bubble, pie, polar, matrix....
- + In-App Charts are graphs inside a single record based on data contained in a data grid
- + Most charts have zoom enabled to see more detail if required

SCREENSHOT

CHARTS OVERVIEW

KEY POINTS

- + Charts show values from multiple records
- + Use the Filter to show only values from the records you want to see
- + Hover over data points to see more details
- + Click on legend to show / hide details
- + Note: most charts will allow you to click through to individual records

SCREENSHOT

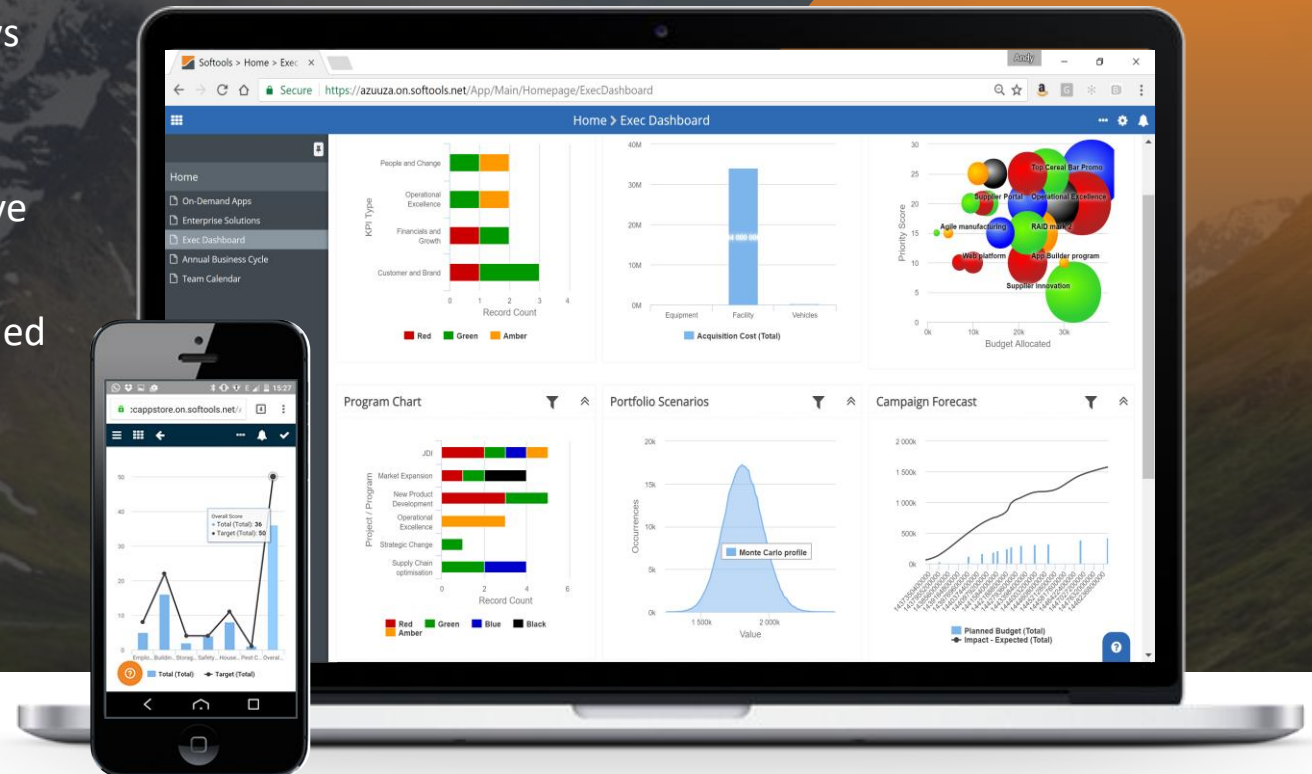

DASHBOARDS & REPORTS

KEY POINTS

- + Charts provide summary or portfolio level views or our data
- + Combine charts from different Apps to create Dashboards that will provide real-time Executive visibility & control
- + Note: Charts can also be based on data contained in other systems such as SAP

SCREENSHOT

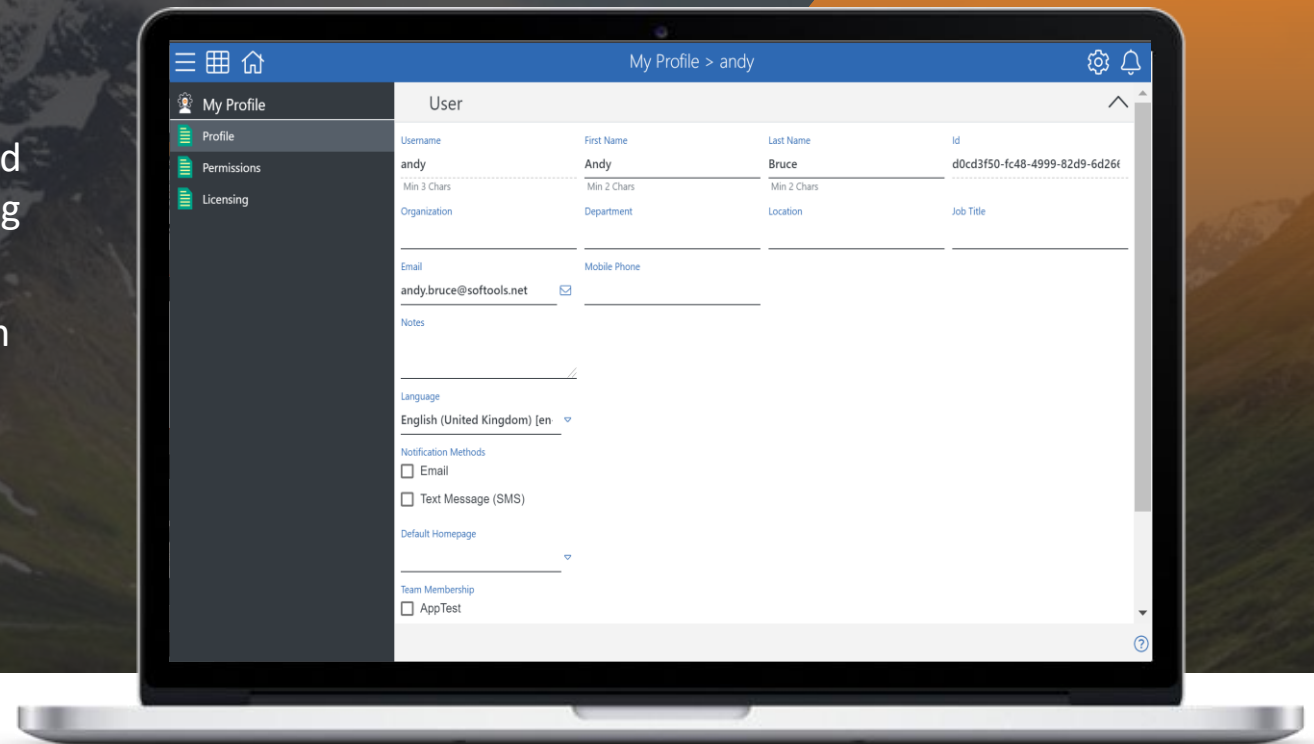

COGS MENU

KEY POINTS

1. The Cogs menu will differ depending on your permissions but you may have access to:
 - My Profile. Click on the Cogs menu to access and update your profile. Note: your language setting will be based on the 'locale' of your browser
 - Support (also available from the ? In the bottom right of your screen)
 - App Studio (where you build apps)
 - Log-out

SCREENSHOT

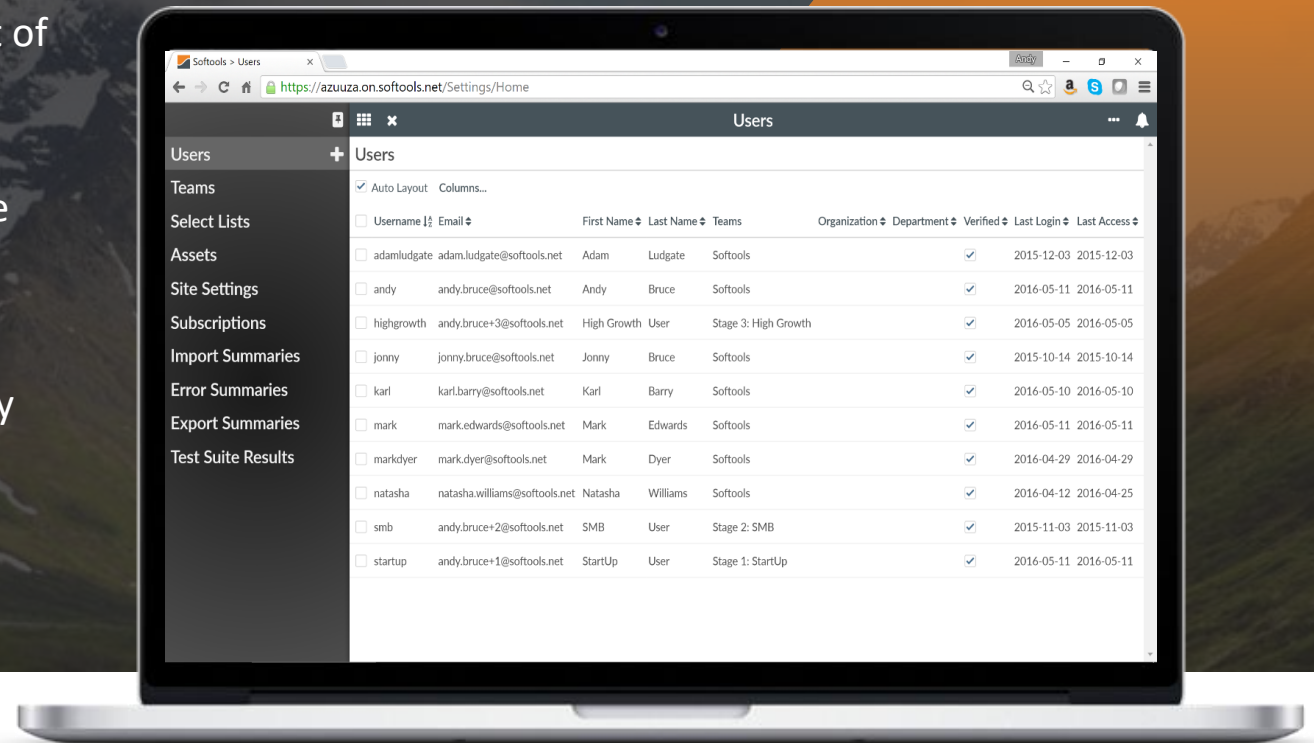

SYSTEM ADMIN

KEY POINTS

- + Clients Administrators can control every aspect of the Portal through the Settings and App Studio areas
- + The Settings area is where Teams and Users are set-up and controlled
- + Note: Users will only see options for which they have explicitly been given the necessary permissions

SCREENSHOT

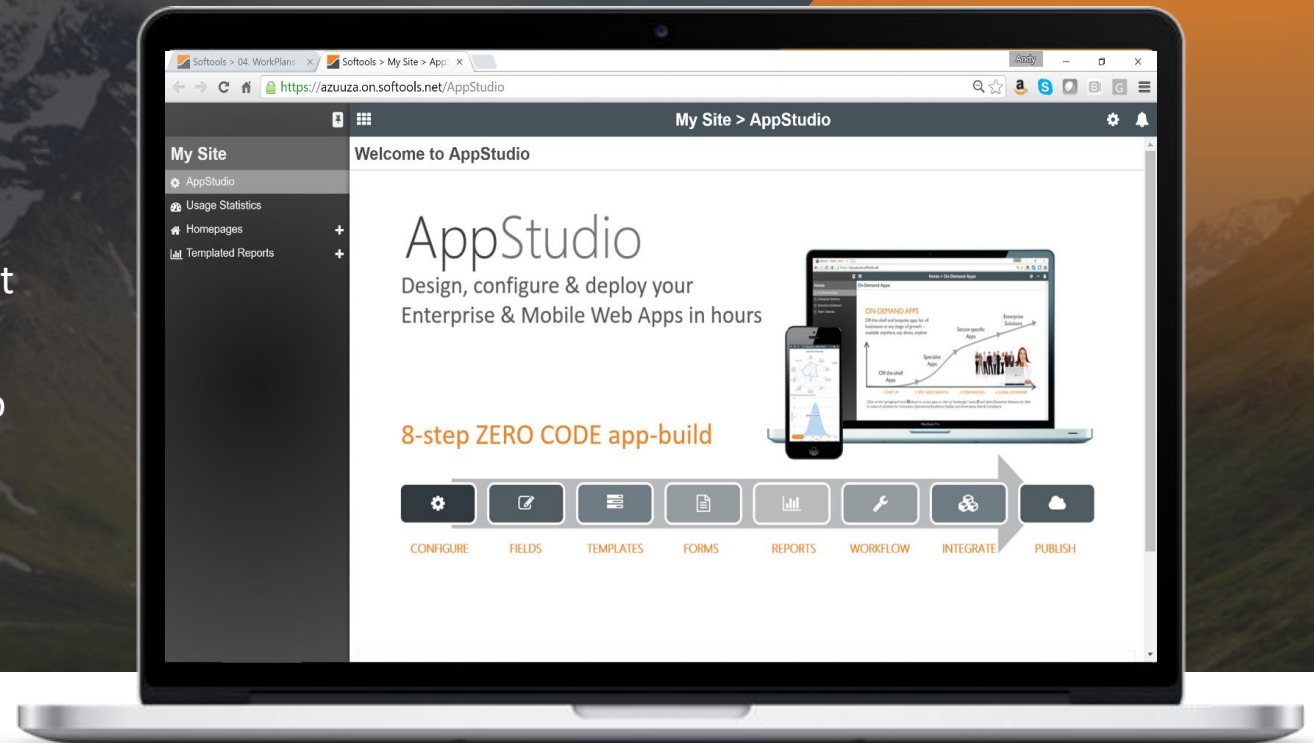

APP STUDIO

KEY POINTS

- + App Builders use the App Studio to design, configure and deploy apps
- + App Studio is also where Homepages / Dashboards and Export Templates defined
- + Apps can either be copied and modified or built from scratch with zero coding
- + More advanced Technical App Builders can also integrate applications with Enterprise Systems using APIs

SCREENSHOT

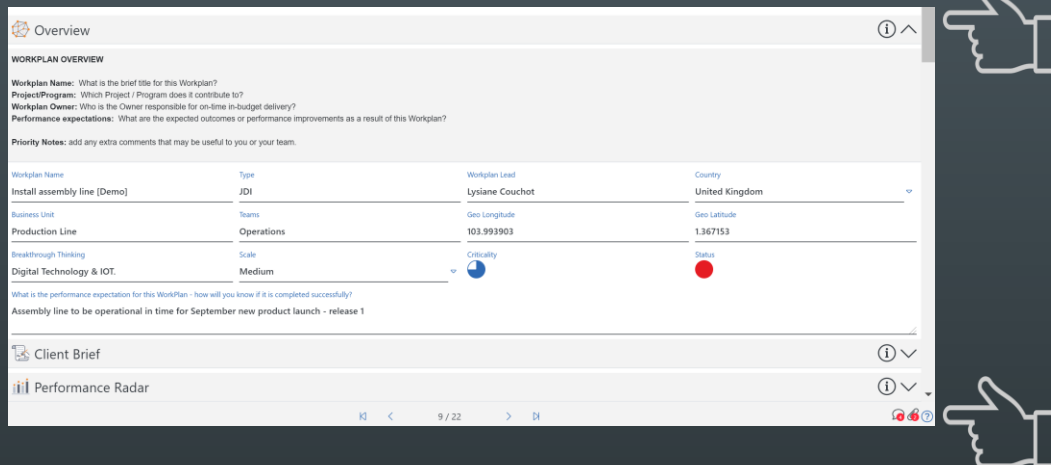

GETTING HELP

APP HELP

Support is available in each app in two areas:

- Every Template will have PROCESS help behind the ‘i’ icon in the top right of each Template
- SYSTEM help is available from the ‘?’ in the bottom right of your screen

Overview

WORKPLAN OVERVIEW

Workplan Name: What is the brief title for this Workplan?
 Project/Program: Which Project / Program does it contribute to?
 Workplan Owner: Who is the Owner responsible for on-time in-budget delivery?
 Performance expectations: What are the expected outcomes or performance improvements as a result of this Workplan?
 Priority Notes: add any extra comments that may be useful to you or your team.

Workplan Name	Type	Workplan Lead	Country
Install assembly line [Demo]	JDI	Lysiane Couchot	United Kingdom
Business Unit	Teams	Geo Longitude	Geo Latitude
Production Line	Operations	103.993903	1.367153
Breakthrough Thinking	Scale	Criticality	Status
Digital Technology & IOT.	Medium		

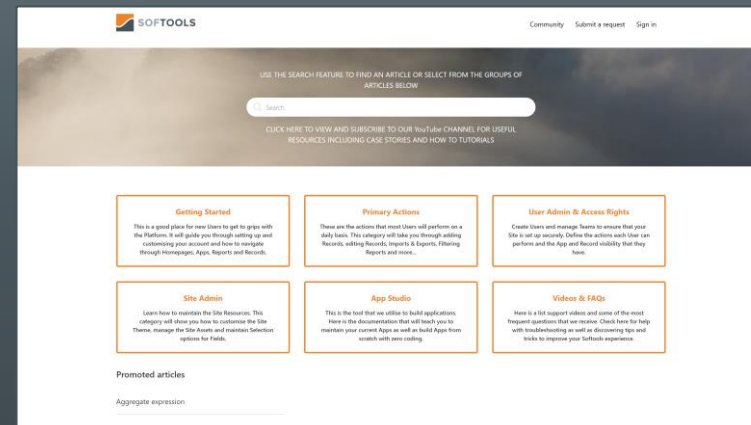

What is the performance expectation for this Workplan - how will you know if it is completed successfully?
 Assembly line to be operational in time for September new product launch - release 1

Getting Started

This is a good place for new users to get to grips with the Platform. It will guide you through setting up and customising your account and how to navigate through Homepages, Apps, Reports and Records.

Primary Actions

These are the actions that most users will perform on a daily basis. This category will take you through adding Records, adding Records, Imports & Exports, Filtering Reports and more.

User Admin & Access Rights

Create Users and manage Teams to ensure that your Site is set up securely. Define the actions each User can perform and the App and Record visibility that they have.

Site Admin

Learn how to maintain the Site Resources. This category will show you how to customise the Site. There's manage the Site Areas and maintain Selection options for Fields.

App Studio

This is the tool that we utilize to build applications. Here is the documentation that will teach you to maintain your current Apps as well as build Apps from scratch with zero coding.

Videos & FAQs

Here is a list support videos and some of the most frequent questions that we receive. Check here for help with troubleshooting as well as discovering tips and tricks to improve your Softtools experience.

Promoted articles

Aggregate expression

YOUR KEY CONTACTS

For questions about your Apps and what is expected of you, please contact your System Administrators.

EXTRAS

ADDITIONAL INFORMATION FOR SYSTEM ADMINISTRATORS AND APP BUILDERS

ICON	DESCRIPTION	ICON	DESCRIPTION
	Hamburger icon: show and hide the left hand menu bar.		Archived a record.
	Screen menu: Access to record or report menu.		Copy a record, create an identically record.
	Springboard menu: direct access to the apps and settings menu.		Subscribe: subscribing to a record will update every time there is a change to the record via the notification feature.
	Magnifying glass: smart search.		Security: determine which Users or Teams can access or edit a record.
	Plus: use to create a new record.		Upload files.
	Home page button: This button takes you back to the home page of the site/app		Cog: Menu where you can access to Settings, your Profile, AppStudio, Request an App and Log Off. This menu is accessible at a report app level.
	Drop down more information.		Attachments: View a list of attachments such as documents, spreadsheets, pdf files or videos that are available for download. You can upload new attachments using the drag and drop functionality or the file search capability.
	Filter: allow a sub-set of records to be displayed in a preferred grouping.		Comments: View comments added to a record and leave new comments for other users. This feature provides a useful chat room for all key stakeholders for the record to share ideas and notes.
	Export: to export the data in either csv (Excel) or PDF format		Notifications: Gives the user updates on bulk operations they are running, updates to records they are subscribed to and notification messages triggered by additional workflow.
	Tag: tagging a record associates one or more keyword to the record.		Report Filtering: This is used for quick filtering a list report, you can select what fields you want to be seen on the report (Whether they are in the report or app) In Line Editing: Allows the user to update records from a List Report without the need to open each record individually.
	Show archived record.		In Line Editing: Allows the user to update records from a List Report without the need to open each record individually.
	Hide archived record.		Request an App: We have a wide selection of off the shelf apps available. If there is an additional app you would like then let us know and we can contact you to discuss further.
	Refresh: if you make a change you click in it to refresh changes.		Resync App: Resync your app to align it with the most up to date version
	Template Help: Drop down information about the form you are fill in.		History: This provides an audit trail for record creation, field value changes and other key alterations to the record by recording the User who updated the record and what time they updated the values.
	App Information and Learning Resources presents information about the App together with all available Learning Resources		Log Out: This allows you to log out of you account, this in turn resync's your apps
	Support: Allows the user to search through our support articles for guidance and raise a support ticket for our support agents if further advice is required		Support: Allows the user to search through our support articles for guidance and raise a support ticket for our support agents if further advice is required.

CHARTS & DASHBOARDS

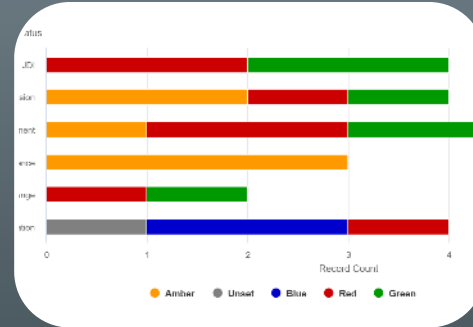

STANDARD SOFTTOOLS CHART TYPES

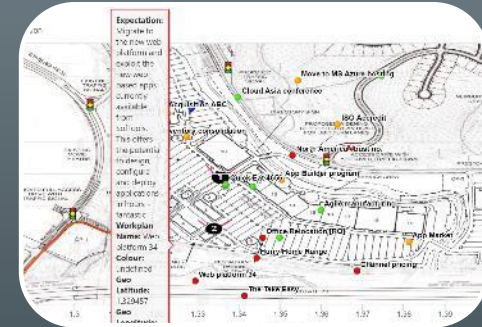

Registers & lists with embedded charts

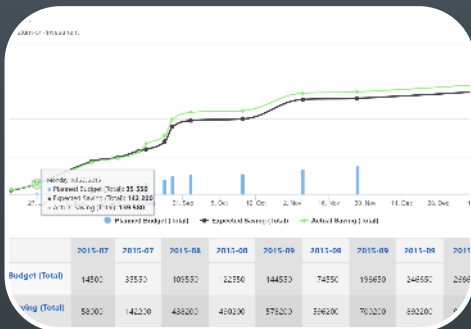

Bubble scatter charts with hover over and drill down

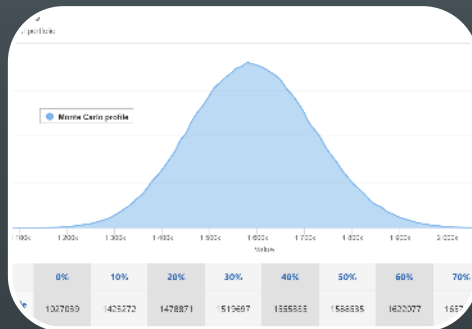

Bar & column charts with Red, Amber, Green status

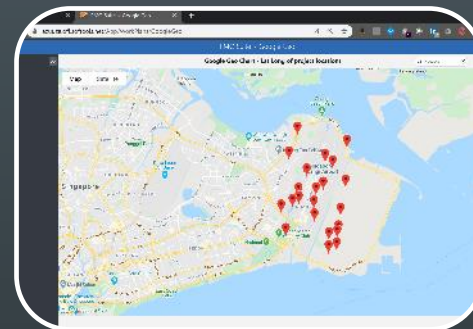

Performance data overlaid on a site map

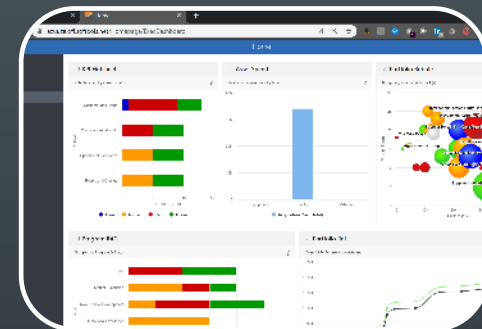

Line charts showing ROI calculation & data

Monte Carlo scenario profiling for risk or value

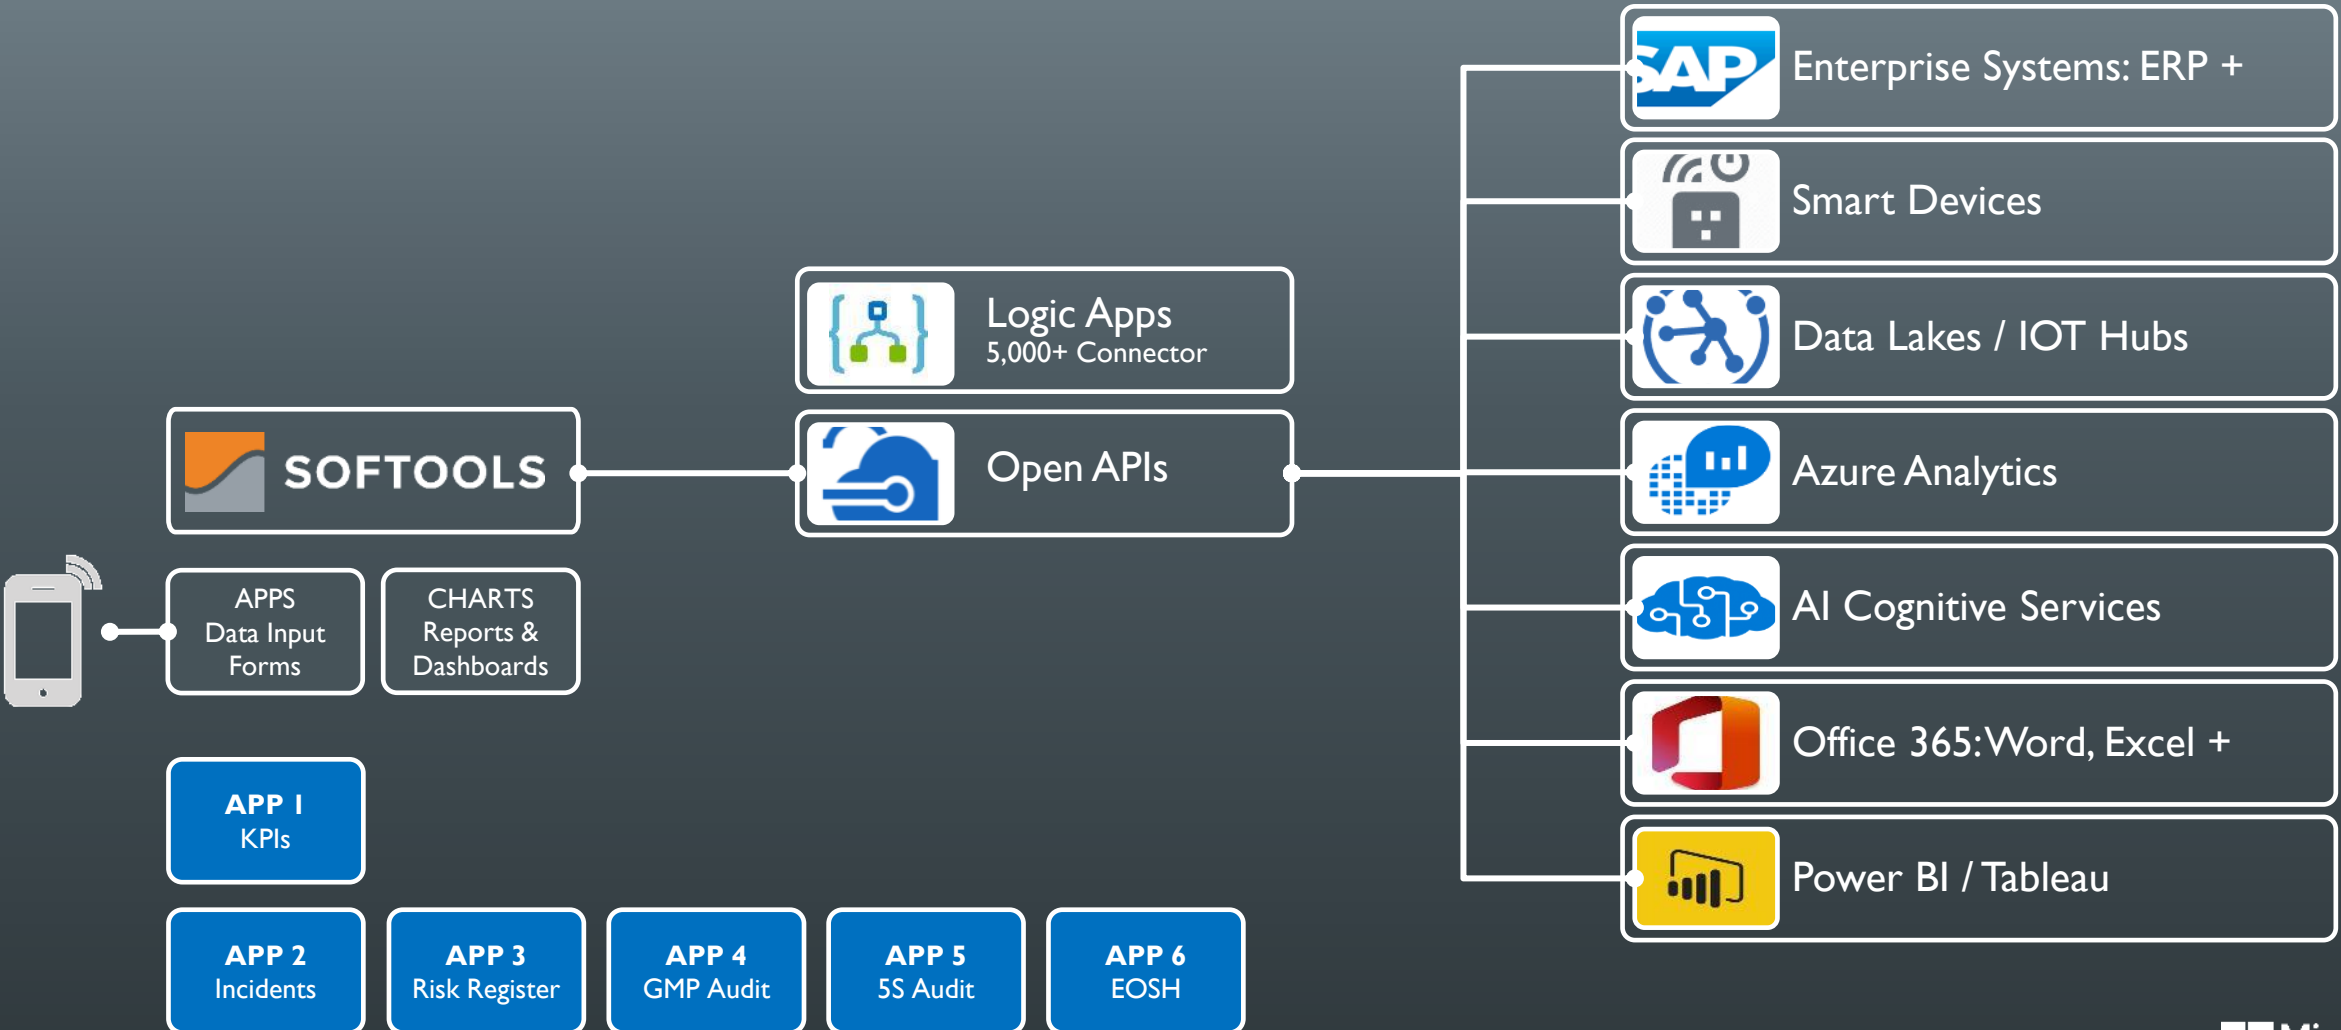

Geo-location showing real-time on Google Maps

Performance dashboards with clicks to source data

INTEGRATING WITH ENTERPRISE SYSTEMS

KEY FACTS

ACCESS

Access to the platform is via any modern browser (IE11, Edge, Chrome, Safari, Firefox, Opera+). The platform is mobile-optimised and so can be accessed on any device from PCs and tablets to Smartphones. Off-line capability is enabled using csv export and import routines, and native app deployment on Windows, Android & IOS) is an option as required.

APP COMPLEXITY

Applications can range from simple list-based stand-alone apps (e.g. Risk Register), to complex apps (e.g. Supply Chain Assessment) that are linked together, driven by workflow and synchronised to 3rd party systems via Softtools published APIs.

APP BUILD

Certified App Builders use the integral AppStudio to design, configure and deploy apps using a systematic 8-step process in hours and with zero coding.

The Softtools API is a JSON-based (JavaScript Object Notation) RESTful API with authentication via “OAuth 2.0 Resource Owner Password” flow with support for refresh tokens

BUSINESS CONTINUITY

The platform is used by many of the world’s leading organisations and Governments, and so data is always held in a secure encrypted environment, controlled by clients and exported at any time.

DATA INPUT

CSV import is used to complete a one-off migration of client data during set-up. Then data is entered into the platform in 3 ways: 1) manual data input, 2) export / import via csv, and 3) real-time data synchronisation with 3rd party systems via WebHooks / APIs.

DATA VALIDATION

Data field parameters and logic based on field type will validate data input is consistent and complete. Specific fields can be set to be mandatory. Specific input forms can be visible or hidden using workflow based on user team or field values.

INFRASTRUCTURE

The platform is deployed in a web hosting environment as single-tenant or multi-tenant. Our default hosting partner world-wide is MS Azure and so deployments are instantly secure, scalable and stable.

INTEGRATION

The Softtools API is a JSON-based (JavaScript Object Notation) RESTful API with authentication via “OAuth 2.0 Resource Owner Password” flow with support for refresh tokens

LANGUAGES

The platform is configured to enable the dynamic translation feature in modern web-browsers (e.g. Google Translate). This allows users in different regions & countries to work on a common platform in their own language. It is also possible for App Builders to ‘hard code’ all system labels in local languages.

PERFORMANCE

Speed of access is largely determined by the bandwidth of local wireless & wired network connections or via 3G & 4G mobile networks. The size of the app will also determine how much data is transferred and will impact speed, as will the proximity of the database to the user (latency). Dramatic advances in web technology continue to enable faster data transfer speeds globally, and the potential to work off-line.

SCALE

The platform can scale from 1 app and user to 1,000s of apps and over 1,000,000 users for a single client

SECURITY

Softtools is used by banking, military and nuclear organisations world-wide and can be locked down to any level. Access to the platform is on a named user basis which determines what a user can see (security) and what they can do (permissions). Single Sign-On (SSO) is available as an option.

SUPPORT

Users gain first line support from context sensitive help built into each app and platform screen. Second line support is then provided by internal certified Program Leaders and Administrators. Third line support is provided to certified Administrators via phone, email and WebEx.

TRAINING

Users, Administrators and App Builders are trained via webinars or in workshops using an ‘action learning’ approach:

- Level 1 - Basic User (2 hours)
- Level 2 – Super-Users / Administrators (+2 hours)
- Level 3 – Site Administrators (+2 hours)
- Level 4 – Basic App Builders (+ 1 day), and
- Level 5 – Advanced App Builders (+ 2 days).
