Dear Chairman Kingston and Ranking Member DeLauro:

The National Center for Health Statistics (NCHS) is the nation’s principal health statistics agency. Housed within the Centers for Disease Control and Prevention (CDC), it provides critical data on all aspects of our health care system through data cooperatives and surveys that serve as a gold standard for data collection around the world. The 24 undersigned members of the Friends of NCHS recommends a program level of $182 million in FY 2015, consistent with FY 2013 and the president’s FY 2015 budget request. Our request would bring NCHS funding back to the FY 2013 program level.

NCHS collects data on chronic disease prevalence, health disparities, emergency room use, teen pregnancy, infant mortality, causes of death, and rates of insurance to name a few. These data are used by the Census Bureau in informing its population estimates and projections; by USDA in developing nutrition policies that undergird multibillion dollar federal food assistance programs; by state and local governments and public health officials; by federal policymakers; and by demographers, epidemiologists, health services researchers, and other scientists. The health data collected by NCHS are an essential part of the nation’s statistical and public health infrastructure.

We greatly appreciate the Subcommittee’s longstanding leadership in securing steady and sustained funding increases for NCHS. Your support has helped NCHS rebuild after years of underinvestment and stabilize the collection of essential health data. For example, NCHS has funded states and territories to modernize the National Vital Statistics System—moving from paper based to electronic filing of birth and death statistics. Because of these and other data processing enhancements, NCHS has been able to speed the release of birth and death statistics in response to the user community’s needs.

In FY 2014, the agency sustained a $25 million or 14 percent cut in program level from the loss of the Prevention and Public Health Fund. Our request would restore that funding to the FY 2013 level and allow NCHS to continue to modernize its data collection efforts to produce more comprehensive, higher quality, more timely data. For example, our request would allow NCHS to:

- Support up to eight states in implementing electronic death registration systems (EDRS) to enhance data timeliness and security.
- Restore expansions to the National Health Interview Survey and the National Ambulatory Medicare Care Survey to better assess Americans’ access to, and use of, health care services.
• Support a new public health systems research initiative that would expand data on health care utilization and effectiveness and determine “what works” in public health.

As you prepare the FY 2015 Labor-HHS-Education Appropriations bill, we respectfully ask that you provide NCHS with \textbf{\$182 million} to strengthen these and other important data collection and quality improvement initiatives. The Friends of NCHS thanks you for your ongoing support of health data and looks forward to helping you further strengthen the agency.

The Friends of the NCHS is a coalition of organizations that want to ensure the agency’s continued vital role in monitoring our nation’s health. For more information on the Friends of NCHS, contact Lindsey Horan at 202.292.6718 or lindsey.horan@academyhealth.org.

\textsuperscript{1} This level reflects the implementation of CDC’s new working capital fund (WCF). This is a new approach for funding internal business services that allows CDC to charge fees for services and finance WCF operations. NCHS will pay for business services out of its budget, where in the past these services, such as human resources, IT services, and financial management, were funded centrally by CDC. To allow NCHS to pay for these services, money that was appropriated centrally is being added to the NCHS budget, approximately \$15.3 million.
