

# *Eriogonum parvifolium*

## Coastal or Sea-cliff Buckwheat

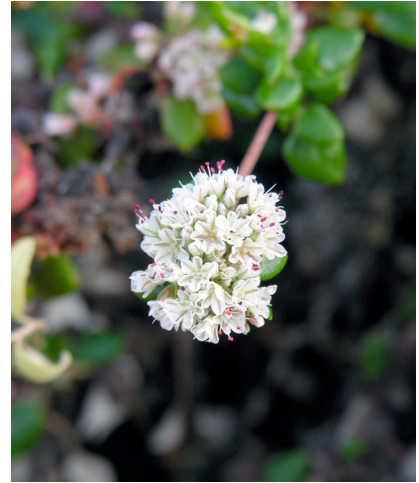

WOODY SUBSHRUB, PERENNIAL

- evergreen.

1 - 2' high, 4 - 6'+ spread; prostrate.

Small spoon-shaped leaves, green  
(turning red) above, white beneath.

Clusters of creamy pink-white flowers  
on stalks, turn rich brown by end of  
summer.

Photographs by Margaret L. Fillius

Native habitat: coastal strand, coastal  
sage scrub - bluffs and dunes along  
the coast - Monterey to San Diego.

Full sun to part shade.

Tolerant of salt spray.

Very drought tolerant. Can do with or  
without water (1 - 2 x/month).

Good in rock gardens and for slope stabilization  
along coast.

Attracts hummingbirds, butterflies.
