

Agrostis pallens

San Diego Bent Grass

PERENNIAL BENT GRASS - deciduous

Leaves are close to the ground but flowering spikes can be 2' high.

Can spread by rhizome.

Blades are fine-textured.

Flowers are lacy - summer.

Native habitat: open meadows, woodland, forest, subalpine, between 600 and 10000' - California to British Columbia and Montana.

Full sun to part shade - flowers more in sun. Frost resistant.

Water 1 to 2 x /month.

May be used as spring lawn, but can go dormant in summer.
