

# *Ambrosia Chenopodifolia*

## San Diego Bur-sage

PERENNIAL SHRUB.

To 11' high, rounded; many branches.

Leaves coated in white hairs.

Flowers are inconspicuous; monoecious; February to May.

Fruit have dense hooked spines.

Native habitat: coastal sage scrub below 850', southwest San Diego County to Baja California.

Full sun or part shade.

Little (1 - 2 x/month) to no summer water, once established.

Good color contrast.  
Best away from traffic.
