MULTI-DOMAIN

With Stacks Multi-Domain you can create multiple domain websites under a single dashboard. Manage your websites from a central location, with robust management and publishing options.

Benefits Include

- **Manage Content Effectively.** Publish content to one, some or all of the domains that are associated with your Stacks site.
- **Ensure Content is Consistent.** Eliminate unnecessary steps when managing centrally controlled content and ensure your content is consistent across your websites.
- **Affordable.** Stacks provides a cost effective solution for consortia by providing professional industry-leading websites that are affordable and sustainable.
- **Focus on Creating a Great User Experience.** Rest assured knowing that content will take on the look and feel of the destination site, even when published across multiple sites.
- **Local Content.** Maintain a central administration while delegating work and allowing local administrators to manage their domain and content independently.
- **Create Community.** Share content across your sites and ensure it is available to, and consistent for, your consortia.
- **Granular User Roles.** Stacks provides a library-specific hierarchical role structure designed to support all levels of staff. Intricate moderation rules to help ensure safe and responsible workflows within your organization.

Stacks Domain Access

The following domains have been created for your site. The domain you are currently on is **shown in boldface**. To be on a different domain, click on. Your default domain is sub.stacks-local.dev, which will be used for all requests that fail to resolve to a registered domain.

Id	Name	Domain	Active	Operations
1	Stacks Research Portal	stacksdemo.site	✓	edit domain
