

Exceed expectations with the e-reserve system that works for you.

The e-reserve system designed to work the way you work

The Ares system automates library reserve services, provides around-the-clock access to reserves collections, includes integrated copyright management services, and saves time for faculty members and library staff.

"We're very happy with the service and productivity enhancements we've gained since making the switch from our previous reserves system. Our faculty members really like the capabilities they have in Ares."

With more customization and add-on capabilities for greater integration with other library and campus systems, Ares is the e-reserves system "that plays nice with others."

Easily accepts data from other systems, reducing the amount of time spent re-keying information. From within the Ares client you can:

- Search your OPAC without using Z39.50
- Search articles in Google Scholar and proprietary journal databases
- Search titles in Amazon.com to populate bibliographic information quickly
- Plus, any add-on configured for ILLiad can be adapted for use with Ares

Provides easy, flexible ways to manage, track, and pay copyright. Staff can look at copyright status at any point in the queue and choose to fulfill copyright through the Copyright Clearance Center (CCC) or go direct to the publisher/ individual rights holder. Ares is the only reserve system integrated with the CCC's Annual Copyright License.

Mirrors ILLiad to facilitate cross-training. Ares 4.0 has been designed to mirror the look and feel of ILLiad. From the Customization Manager to enhanced printing capabilities, staff familiar with ILLiad will find it easy to use Ares.

• **Increases staff productivity.** Faculty can easily upload their own reserves, freeing up reserve staff time. Staff can use flags to define item status (e.g., needs copyright processing), prevent two people from opening the same item, and have several processes going on simultaneously. Batch uploading of scanned items saves time and with custom search capabilities staff can find information quickly. Ares is Unicode compliant and accepts all date formats.

• **Allows instant access to usage statistics.** Instructors can access statistics on the website, eliminating the need for library staff to produce reports. Faculty can quickly see what materials are being used by students and evaluate whether to continue putting the same material on reserve. When reports are needed, staff can save and share them with others.

• **Integrates with external e-learning systems such as Blackboard, Moodle and Desire2Learn (D2L).** One login and interface simplifies access to course reserve information. Ease of use encourages faculty to go in and check the accuracy and status of their reserves regularly. The ability to clone classes reduces the amount of time it takes for faculty to prepare for classes each term.
