YOU HAVE A JOB TO DO.
We help you do it.

Aeon is automated request and workflow management software specifically designed for special collections libraries and archives.

Aeon improves patron service and maximizes efficiency while providing unparalleled item tracking, security and statistics. Simply put, Aeon helps you find, manage, store, protect and increase the visibility of your valuable resources.

Your Researchers want to find it, request it, see it.

So WHAT ARE YOU DOING ABOUT Aeon?
How will Aeon help us enhance service?

Your researchers don’t want to just find what they want; they want to get what they’ve found. They want to find it, request it, and see it. So whether it’s enhanced imaging services, expedited reading room management, or the ability to easily keep a history of what they’ve requested and what they’ve used, Aeon helps you deliver more of what your users want.

How will Aeon help us gather better, more meaningful statistics on our collections and users?

Aeon is a big database, which means you can find out everything you want to know about your users and how they are using your collections. Aeon also gives you access to graphic reports with Atlas BI. With Atlas BI you get an easy-to-use real-time business intelligence and reporting analytics system that provides fast, intuitive, graphic-based reporting tailored to your needs.

How will Aeon help us improve security?

Aeon focuses on your material—where it’s been, where it needs to go, who’s had it, and what has to happen next. The Aeon software tracks every step of your workflow so you will know where everything is all of the time. That means that in addition to monitoring for potential theft we also track circulation frequency so you can identify materials that might be candidates for digitization or additional conservation services.

How many institutions are using Aeon?

More than 80 institutions have implemented Aeon, from smaller institutions to large universities. Aeon software is highly scalable so it can help you be better prepared as your collection size and usage demands increase. Institutions as diverse as the Harvard College Library at Harvard University, the Newberry Library, the Folger Shakespeare Library, Yale University and a host of other universities and special collections libraries trust Aeon to grow as they grow. For the most up-to-date list of Aeon sites, visit www.atlas-sys.com/aeonusers.

How is Aeon different than what we can do using our various local systems?

Aeon is designed from the ground up to manage special collections and archives. While it may be true that by integrating several systems you can achieve similar functionality, all that takes time, effort, and money to implement, manage, and support.

Linking systems is an integral part of the Aeon product. You might have multiple systems that need to work together, including an archival management system such as ArchivesSpace*, your ILS, a digital assets management system, and more. Atlas Systems will work with you and your IT team to ensure a smooth integration among your systems. That’s why we say “we play nice with others.”

How can Atlas Systems help us with ArchivesSpace?

Atlas Systems is an ArchivesSpace Registered Service Provider. So, in addition to helping integrate Aeon with your ArchivesSpace, we also provide services in five areas: migration, implementation, training, server hosting, and support. We can convert and import data from a variety of systems to ArchivesSpace, including homegrown local systems. We provide server hosting at three levels, so regardless of your institution’s size or prior experience with ArchivesSpace, Atlas Systems can help.
