About Atlas Systems

Atlas Systems partners with libraries, archives, museums, and information repositories of all kinds to facilitate and promote collection visibility and access. Together we create products and services that support efficient workflows allowing information professionals to spend more time focusing on the needs of their users.

From Aeon to ArchivesSpace

Automating Special Collections and Archives Management with Atlas Systems—the one stop for all you need.

Your researchers don’t want to just find what they want; they want to get what they’ve found. They want to find it, request it, and see it. So whether it’s enhanced imaging services, expedited reading room management, or the ability to easily keep a history of what they’ve requested and what they’ve used, Aeon helps you deliver more of what your users want.

Aeon is automated request and workflow management software specifically designed for special collections libraries and archives. Aeon improves patron service and maximizes efficiency while providing unparalleled item tracking, security and statistics. Simply put, Aeon helps you find, manage, store, protect and increase the visibility of your valuable resources.

More than 80 institutions have implemented Aeon, from smaller institutions to large universities. Aeon software is highly scalable so it can help you be better prepared as your collection size and usage demands increase. For the most up-to-date list of Aeon sites, visit www.atlas-sys.com/aeonusers.

Regardless of your institution’s size or prior experience with ArchivesSpace, Atlas Systems can help. As an ArchivesSpace Registered Service Provider, we provide services in five areas: migration, implementation, training, server hosting, and support.

We can convert and import data from a variety of systems to ArchivesSpace, including homegrown local systems.

We offer server hosting at three different levels, based on the needs of your institution. This allows small repositories to find a cost effective, secure hosting environment while a more advanced Enterprise level hosting provides multiple servers for sites that require a sandbox server to test new plugins and other ArchivesSpace tweaks.

For more information about Aeon, visit www.atlas-sys.com/aeon or email us at aeon@atlas-sys.com.

For more information about ArchivesSpace, visit www.atlas-sys.com/archivesspace or email us at aspace@atlas-sys.com.
