SPLIT DIAMOND BULLS <> ALWAYS A LASTING VALUE

All bulls
PAP & i50K Tested!

Selling 160 Yearling Bulls
Dear Cattlemen and Friends,

It is a great honor welcoming you to our 28th Annual Angus Bull Sale. It is amazing, how during the last 27 years how our Angus bulls have evolved. Through genetics, multitudes of data, and the dedication of sticking to a program of easy calving, thick, moderate framed, easy fleshing cattle that will work really well in a variety of environments.

Our goal is to provide our customers with progressive genetics that are best suited for our environment. Our commitment to reaching these goals includes ongoing investment in new technologies. For the last 6 years we have Genetically verified every bull we have sold for their genetic potential and also for parentage. Meaning that the EPDs are as accurate as we can present them and the SIRE parentage has also been verified. We have gone a step further by testing and verifying every replacement heifer over the last 5 years, any new cows that we bring into the herd and all new herd sires. By doing this we are guaranteeing parentage verification and adding more accuracy by creating Genomic Enhanced EPDs (GEPDs) using the HD50K. Please read the information pages on Zoetis and the products they provide to give you more value for your end product. By doing this when you use Split Diamond bulls if something is good or not so good, we can determine Sire parentage on the calves and figure out which bull is affecting the outcome. With that information we can either enhance the good attributes or remedy the problem.

We also started PAP testing 4 years ago to try and limit ours and our customers exposure to high altitude sickness (Brisket Disease). As with everything it is not an exact science but we feel we have come a long way to determine Sire lines that are better suited for higher elevations. Since we started, we are proud to say every year we have continued to improve by having more animals below a 44 PAP and less animals over a 50. If you are in a higher elevation situation, we encourage you to read the guidelines on our PAP procedures on Page 3.

Last year we added some feeder calf marketing programs and I am happy to report they were a success. We have developed partnerships with two reputable cattle buyers to purchase our customers calves. The first is a value added program through Linz Heritage Angus and Meats by Linz for genomically verified feeder calves, this is the reason we have invested so much into the Zoetis i50K testing. They were able to purchase about 1000 head of calves that met that program in the fall of 2018. The second is with KROSE Cattle Company who have been buying and selling feeder calves, replacement heifers, bred heifers and cows for the last 25 years. They were able to purchase 600 calves in the fall of 2018. There will be representatives from both companies here sale day and you can find more information on page 5. So please take the time to meet with them, we want to increase those numbers for 2019.

The bulls completed a 120-day performance test with a 3.2 lb. average daily gain to have a moderated growth rate, so that they can be turned out and work for you. They have been rigorously screened and tested to bring you bulls that we are proud of. They have been semen tested, scrotal measured. These bulls have received a complete fall and spring vaccination program including 2 shots for foot rot. We don’t stop there, we also provide a first year breeding guarantee and a sight unseen purchase guarantee for all those who choose to bid over the phone or online using cattleusa.com (Instructions on Page 3). We are still offering a VOLUME DISCOUNT 3-5 bulls purchased is a 5% discount and 6 or more bulls is a 10% discount. As always, if you haul your bulls home sale day you receive a $100 discount per bull.

We are sincerely grateful for your interest in our Angus breeding program and hope to see you at the sale, whether you come to “shoot the bull” or buy a bull, we’ll be happy to see you. We welcome you to view the bulls at the ranch until they are sent to Beaverhead Livestock Auction on Tuesday March 5th and will be available for viewing. Sale time is at 1pm MST Thursday, March 7th.

We want your business, but most of all we want your friendship, your success is our success!

Our main success comes from the great help and extended family of our employees.
Nacho and Amy Rodriguez, John and Pam Drogitus, Sharmen Scafani, and Ken Hartwig.
We thank each and every one of them, without them we would be stuck in the cold.

With warm regards,
Steve, Linda, Hans, Diana and Crew

Ask for the Split Diamond Ranch Bull Sale Rates

DEVELOPMENT
Free delivery of your bull purchases up to 500 miles from the sale site; beyond at cost.

VOLUME DISCOUNT
3-5 bulls 5% discount, 6+ bulls 10% discount. $100 rebate per bull for hauling your purchases home on sale day.

RETAINED INTEREST
Split Diamond Ranch retains a 1/3 revenue share on all bulls sold in the sale. Purchaser has 100% possession and salvage value. Unless otherwise stated.

PAP TESTING
All bulls PAP tested. See page 3 for more details.

HERD HEALTH
Split Diamond Bulls are on a complete health program from birth until sale day. At birth they receive Inforce 3, Alpha 7 C&D, Type A Clostridial. At Branding they receive Bovishield Gold 5+One Shot, Ultrachoice 7, Dectomax Injectable, and Multimin 90. At weaning time they receive One Shot Ultra 7, Resvac – Viral + Somnus, SolidBac, Multimin 90, and ivermectin Pour On. December they received their Fuso Guard (foot rot) and Wart Vaccine with a booster to follow. February they received Ultrachoice 8 and Bovishield Gold FPS VL. Complete fertility Screening performed by DR. Bob Heningson of Jefferson Vet Clinic. ALL Split Diamond Bulls have the BVD ELISA Test (ear notch) to identify PI Cattle. All Bulls tested Negative.

PERFORMANCE DATA
All bulls were performance tested. Complete, accurate performance and carcass EPDs, ultrasound data and projected sale day weight are provided on every bull selling.

TERMS
Terms of the sale are cash, unless prior arrangements have been made with Steve Buckner.

FIRST BREEDING SEASON INSURANCE
All bulls will be covered 50% by Split Diamond Ranch if they are injured during their first breeding season. Breeding is defined as the 90-day period following the first turnout of the bulls. 50% of the value of the injured bull, minus one-half salvage value, will be given as credit in a future sale or toward a replacement bull if one is available. Salvage value, if any, will be split equally between Split Diamond Ranch and the buyer. All injured bulls must be diagnosed by a veterinarian. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2019.
Dear Cattlemen,

This is an exciting time in the beef industry to select bulls that are specifically designed to do a job that can be determined by the scientific and cowboy data at our hands. New technology has changed the face of the industry and Split Diamond Ranch is at the forefront supplying their customers the genetics and the customer service they need to compete.

Split Diamond bulls have the basics in order to work in rugged, real world conditions in Montana and western range country. This herd embodies the fleshing ability, udder quality, calving ease, roughage conversion, rebreeding ability and functional soundness aspects that are demanded in their cowherd. They have also spared no expense in acquiring herd bulls that express those qualities as well as carcass and growth attributes and then measured the results with every technology available. If you have any questions about these bulls don’t hesitate to call me.

Sincerely,

Gary Wall, GW / ORIgen / Genetics Unlimited
(406) 208-8536
We feel it is important for our high altitude customers to have an indication to which genetics should perform for their altitude. We know that testing at 5,000 ft in elevation is not the most ideal protocol. But we feel it is very important to find and limit the risk of High Altitude Disease (HAD). We have decided to do the PAP test at our home ranch in an attempt to get as much information we can concerning a PAP score to our customers increasing the odds in the selection of a bull suitable for high altitude use. Scores of less than 41 have a greater than 70% accuracy of remaining low and are a good risk for use in high elevation. Scores 42 – 46 should be considered moderate risk and difficult to predict high altitude use. Scores 47 and greater tested at the elevation of our ranch should not be used at high elevations. All these bulls should be retested once they have moved to their new home if high elevation is of concern to your operation.

All our replacement heifers and sale bulls were grazed at 6000 ft. or higher for the summer. We brought the bull's home in September to be weaned and developed them for the sale.

We have waited to perform the test until the majority of the bulls are over 12 months of age, evidence points to testing bulls at an older age (at or equal to 12 months of age) will increase our accuracy levels of the PAP test. We should see accuracy levels in the 65% to 70% range even though the altitude at testing time is not at 6000 ft. or higher.

All the values will be available sale day and will be posted on our website www.splitdiamond.com for viewing before the sale. As with a lot of tests this is not a concrete marker for High Altitude Sickness however we feel it is an important tool for recognizing problem genetics before they start.

We have enlisted the expertise and guidance of DR. Ben Abbey from Beaverhead Vet Clinic who is one of 7 Nationally Recognized Vets to perform this test to be reported to the Angus Association. He has recently completed a continuing education program for the PAP testing protocol.

If you have any questions, Call Dr. Abbey at: Office 406-683-9397 or Cell 406-660-1412

**HERE IS OUR GUARANTEE:** If you buy a bull that has a PAP score of 44 or less. Take the bull home to your elevation and keep him at that elevation the required amount of time for a re-test. We will pay the cost of the re-test. Then retest the bull, if he does not give a satisfactory score at your altitude by a certified PAP testing vet we will refund you the purchase price and take the bull back. You can buy with confidence from Split Diamond Ranch that all our bulls are guaranteed.

---

*Split Diamond Ranch • Whitehall, MT • 406/ 498-3005*
**Understanding EPDs**

**Expected Progeny Difference (EPD)**, is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

### Production & Maternal EPDs

**Calving Ease Direct (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which an sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

### Carcass EPDs

**Carcass Weight EPD (CW)**, is a predictor of transmitting ability for hot carcass weight.

**Marbling fat EPD (Marb)**, is a predictor of the difference in a sire's progeny for percent intramuscular fat in the ribeye muscle compared to other sires.

**Ribeye Area EPD (RE)**, is a predictor of the difference in square inches of ultrasound ribeye area of a sire's progeny compared to the progeny of other sires.

**Fat Thickness EPD (FAT)**, expressed in inches, is a predictor of the difference in ultrasound fat thickness at the 12th rib of a sire's progeny compared to the progeny of other sires. It includes the weighted average of 60% of the rib fat measurement and 40% of the rump fat measurement.

### $Values

$Values are multi-trait selection indexes expressed in dollars per head, to assist commercial beef producers by adding simplicity to genetic selection decisions. A $Value has meaning only when used in comparison to the $Value of another animal. For example, just as with EPDs, variation in $Values between animals indicates average expected differences in the relative value of progeny if random mating is assumed and the calves are exposed to the same environment.

**Weaned Calf Value ($W)**: an index expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. $W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

**Feedlot Value ($F)**: an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning performance compared to progeny of other sires.

**Grid Value ($G)**: an index expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

**Beef Value ($B)**: an index expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires. The $B value combines the contributions of $F and $G.

- Sire of the high selling bull in the 2017 bull sale to ABS Global.
- Advantage sons are highly sought after for eye-appeal, length and tolerance for high altitude. More than 30 sons over the last 2 years have an average PAP score of 41.
- Was the $48,000 second high selling Final Product son in the 2014 fall Sitz sale.
- Advantage progeny have risen to the top in almost every measurable trait. His calving ease and vigor that are expressed in his calves is amazing.
- Calves are docile with exceptional length, depth of rib and structural correctness.
- Advantage is the kind that will keep you in the cow business. Fault free & easy keeping.
- Owned with Sitz Angus

**Dams 1st calf**

**Sitz Response was the high selling $55,000 bull that we felt we had to use for his moderate frame exceptional thickness and maternal qualities. He has not disappointed with the phenotype he has put in our bulls we offer you.**

**Big muscle, easy fleshing son with ADG ratio of 116**
