Beaverhead Livestock Auction • Dillon, MT

Selling 130+ Yearling Bulls

PAP Tested <> Fertility Tested <> Maternally Minded <> Range Functional <> Easier Calving <> with lots of performance!

Online Bidding At: CATTLEUSA.com
Dear Cattlemen and Friends,

We would like to start off by saying thank you to all the customers and friends we have made over the last 40+ years in the cattle business. It is because of you we strive for the best we can be. We are very proud of the bulls we have to offer and this year marks our 29th Registered Angus Bull Sale. How the years have gone by and what changes have been made in our herd and yours with use of all the “NEW” now not so new technologies. This has been possible by selecting genetics that work in a variety of environments and staying true to a commitment of maternal, easier calving, easier fleshing, phenotype, heavy muscle, length of body and scrotal size.

Our goal is to provide “You” our customers with progressive genetics for the last 7 years every heifer and bull retained, any new females or bulls added have been HD50K tested and Parent Verified to evaluate their genetic potential through enhanced EPD’s. This makes their predictability more accurate. The same is true for this year’s Bull crop who have been Parent and Genomically verified and the EPDs have been enhanced accordingly.

We are in our 5th year of PAP testing at 12-13 months of age (giving a more accurate reading) to try and limit the exposure to our customers and us to high altitude sickness (Brisket Disease). This still is not an exact science but we are proud to say every year we have improved by having more animals below a 44 PAP score and less animals over 50. If you are in a higher elevation, we encourage you to read our guidelines and warranty on our PAP procedures on Page 3.

The Bulls completed a 120-Day performance test with a 3.4 lb. average daily gain to have a moderated growth rate. They were fed a high roughage diet of Hay, Haylage and Hubbard Feeds Bull Developer pellet. These bulls have been mercilessly screened and tested to bring you bulls that can carry the Split Diamond name. They have all been semen tested, scrotal measured, Ultrasounded for muscle and carcass merit, and a complete vaccination program (see page 1).

We are sincerely grateful for your interest in our Angus breeding program and we hope to see you at the sale, whether you come to “shoot the bull” or buy a bull, we’ll be happy to see you. We welcome you to view the bulls at the ranch until they are sent to Beaverhead Livestock Auction on Tuesday, March 3rd and will be available for viewing until sale time Thursday March 5th 1 PM MST 2020.

We want your business, but most of all we want your friendship, your success is our success!

Our main achievement comes from our great help and extended family. Nacho and Amy Rodriguez, John and Pam Drogitus, Sharmen Scafani family, Rachel Krug, Garret Pack, and Ken Hartwig. We thank each and every one of them, without them we would not be able to achieve the quality product we bring to you.

With warm regards,
Steve, Linda, Hans, Diana, Oakley and Crew.
DELIVERY
Free delivery of your bull purchases up to 500 miles from the sale site; beyond at cost.

VOLUME DISCOUNT
3 - 5 bulls 5% discount, 6+ bulls 10% discount. $100 rebate per bull for hauling your purchases home on sale day.

RETAINED INTEREST
Split Diamond Ranch retains a 1/3 revenue share on all bulls sold in the sale. Purchaser has 100% possession and salvage value. Unless otherwise stated.

PAP TESTING
All bulls PAP tested. See page 3 for more details.

HERD HEALTH
Split Diamond Bulls are on a complete health program from birth until sale day. At birth they receive Inforce 3, Alpha 7 C&D, Type A Clostridial. At Branding the receive Bovishield Gold 5+One Shot, Ultrachoice 7, Dectomax Injectable, and Multimin 90. At weaning time they receive One Shot Ultra 7, Resvac – Viral + Somnus, SolidBac, Multimin 90, and Ivermectin Pour On. December they received their Fuso Guard (foot rot) and Wart Vaccine with a booster to follow. February they received Ultrachoice 8 and Bovishield Gold FP5 VL. Complete fertility Screening performed by DR. Bob Heningson of Jefferson Vet Clinic.

ALL Split Diamond Bulls have the BVD ELISA Test (ear notch) to identify PI Cattle. All Bulls tested Negative.

PERFORMANCE DATA
All bulls were performance tested. Complete, accurate performance and carcass EPDs, ultrasound data and projected sale day weight are provided on every bull selling.

TERMS
Terms of the sale are cash, unless prior arrangements have been made with Steve Buckner.

FIRST BREEDING SEASON INSURANCE
All bulls will be covered 50% by Split Diamond Ranch if they are injured during their first breeding season. Breeding is defined as the 90-day period following the first turnout of the bulls. 50% of the value of the injured bull, minus one-half salvage value, will be given as credit in a future sale or toward a replacement bull if one is available. Salvage value, if any, will be split equally between Split Diamond Ranch and the buyer. All injured bulls must be diagnosed by a veterinarian. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2020.

EPDs
EPDs are current as of February 7th, 2020. Updated EPDs can be viewed at www.angus.org.

Announcements from the auction block take precedence over any printed material.
Follow Process Below to begin account set up and approval at www.cattleusa.com.

To set up an account is a simple two minute process.
1. Look for the log-in area on the upper left portion of the screen.
2. Find the blue button labeled “Register to View”, click on it.
3. Fill in the form with your name, email, state, username, and password.
4. Press the proceed button at the bottom of the page.

Any time you come back to CattleUSA just enter your username and password to log-in and watch auctions.

Each auction approves its own buyers, no buyers are approved by CattleUSA. This is done for your privacy and security. Your buyer information is kept private and is only released to the auctions you choose. In order get obtain approval to buy at an auction you will need to submit your contact information to each auction you wish to buy from.

1. Log in to CattleUSA.
2. Push the Submit button next the auction you wish to be approved at. The first time you do this, a form will pop-up for you to fill put your contact information. Fill out your information then push the button at the bottom of the form to continue.
3. You have now sent your information to that auction. The auction will now be able to find you in their database and approve you to buy. If you would like to be approved at other auctions push the submit button next to each auction you wish to be approved at. Your information will be forwarded to those auctions only.

Auctions do not have access to your information until you send it to them.

For any approval questions and login please contact Judy Tash
Beaverhead Livestock Auction, Dillon MT 406-683-2002
We feel it is important for our high altitude customers to have an indication to which genetics should perform for their altitude. We know that testing at 5,000 ft in elevation is not the most ideal protocol. But we feel it is very important to find and limit the risk of High Altitude Disease (HAD). We have decided to do the PAP test at our home ranch in an attempt to get as much information we can concerning a PAP score to our customers increasing the odds in the selection of a bull suitable for high altitude use. Scores of less than 41 have a greater than 70% accuracy of remaining low and are a good risk for use in high elevation. Scores 42 - 46 should be considered moderate risk and difficult to predict high altitude use. Scores 47 and greater tested at the elevation of our ranch should not be used at high elevations. All these bull should be retested once they have moved to their new home if high elevation is of concern to your operation.

All our replacement heifers and sale bulls were grazed at 6000 ft. or higher for the summer. We brought the bull’s home in September to be weaned and developed them for the sale.

We have waited to perform the test until the majority of the bulls are over 12 months of age, evidence points to testing bulls at an older age (at or equal to 12 months of age) will increase our accuracy levels of the PAP test. We should see accuracy levels in the 65% to 70% range even though the altitude at testing time is not at 6000 ft. or higher.

All the values will be available sale day and will be posted on our website www.splitdiamond.com for viewing before the sale. As with a lot of tests this is not a concrete marker for High Altitude Sickness however we feel it is an important tool for recognizing problem genetics before they start. We have enlisted the expertise and guidance of Dr. Ben Abbey from Beaverhead Vet Clinic who is one of 7 Nationally Recognized Vets to perform this test to be reported to the Angus Association. He has recently completed a continuing education program for the PAP testing protocol. If you have any questions, Call Dr. Abbey at: Office 406-683-9397 or Cell 406-660-1412.

**HERE IS OUR GUARANTEE:** If you buy a bull that has a PAP score of 44 or less. Take the bull home to your elevation and keep him at that elevation the required amount of time for a re-test. We will pay the cost of the re-test. Then retest the bull, if he does not give a satisfactory score at your altitude by a certified PAP testing vet we will refund you the purchase price and take the bull back. You can buy with confidence from Split Diamond Ranch that all our bulls are guaranteed.

Created by Angus Genetics Inc. (AGI) and powered by Neogen GeneSeek, our sale cattle have been tested with the first DNA profile designed specifically for Angus cattle, Angus GSSM.

Each marker is intentionally chosen from the Angus genome to drive the Angus breed into the future. It offers maximum accuracy for genomically enhanced EPDs at great value. Testing heifer and bull calves ultimately allows you to reap the benefits of faster genetic gain in your commercial herd. With Angus GS, it’s all about you, our customer.

All of the bulls in the Split Diamond Angus Bull Sale have been verified using Angus GS to give you, the buyer, more accurate information to choose your next herd sire.
Understanding EPDs

**Expected Progeny Difference (EPD)**, is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an “I”, and may or may not include the animal’s own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

**Production & Maternal EPDs**

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which an sire’s calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire’s ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire’s ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire’s ability to transmit yearling growth to his progeny compared to that of other sires.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire’s daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire’s genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf’s weaning weight attributed to milk and mothering ability.

**Carcass EPDs**

Carcass Weight EPD (CW), is a predictor of transmitting ability for hot carcass weight.

Marbling fat EPD (Marb), is a predictor of the difference in a sire’s progeny for percent intramuscular fat in the ribeye muscle compared to other sires.

Ribeye Area EPD (RE), is a predictor of the difference in square inches of ultrasound ribeye area of a sire’s progeny compared to the progeny of other sires.

Fat Thickness EPD (FAT), expressed in inches, is a predictor of the difference in ultrasound fat thickness at the 12th rib of a sire’s progeny compared to the progeny of other sires. It includes the weighted average of 60% of the rib fat measurement and 40% of the rump fat measurement.

---

**$Values**

Weaned Calf Value ($W), an index expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. $W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Maternal Weaned Calf Value ($M), an index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Beef Value ($B), an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires. The $B value combines the contributions of $F and $G.

Combined Value ($C), an index expressed in dollars per head which includes all traits that make up both Maternal Weaned Calf Value ($M) and Beef Value ($B). $C is a linear combination of $M and $B. The formula to calculate $C on any given animal is simple:

$$C = M + (1.297 \times B).$$
The Linz family continuously strives to provide customers with the finest genetics that will increase the performance of their herd. These genetics have also caught the eye of some of the finest steakhouses in the world that now partner with Linz Heritage Angus and Meats by Linz. These high-end dining establishments know the importance of consistent quality and have turned to Linz to receive the best product possible.

Because of the consistently high performance of Linz sired calves and the demand for Linz Heritage Angus beef, the Linz family has implemented the Linz Calf Buyback program. Linz Heritage Angus will bid on those Linz sired calves who meet the program requirements. Data is shared with partners to make the absolute most out of bringing Linz genetics into your herd.

We’re always looking for more like-minded ranchers to partner with. Please contact Jerry Dean at (308) 380-0344 for more details and program requirements.

For more information on Targeting the Brand™ visit CABcattle.com.
Top Dollar Angus is a genetic-certification and marketing company focused exclusively on the top 25 percent of the industry in carcass and growth Angus and Red Angus-influenced feeder cattle. Top Dollar Angus is a program similar to other popular branded-beef programs, except that Top Dollar Angus does its branding in the feeder cattle and calf market.

Qualified herds must have two or more generations of Angus (Black or Red) genetics with growth and carcass traits objectively ranking in the top 25 percent of the breed based on documented historical sire use. DNA evaluation conducted by Zoetis or GeneSeek is another workable method to qualify. Once your cattle have met the necessary requirements, they will be marketed under the Top Dollar Angus brand and logo, and will be promoted aggressively to a large number of feed yards and buyers. In today’s market, Top Dollar Angus cattle are seeing premiums ranging from $30 to $70 per head above the average market.

Why the premium? Cattle feeders know that Top Dollar Angus cattle perform better and have higher grid-based carcass rewards compared to other cattle. This puts more dollars per head into the cattle feeder’s pocket, which can be passed back to the producer in the form of premiums paid above market price.

Top Dollar Angus helps take the guess work and surprises out of growing and feeding cattle. Feed yards are tired of unpredictable performance and wide-ranging profitability results from group to group on cattle they purchase. Cattle often look the same and have the same colored hides, but are very different genetically. That’s why the genetic certification of high-end Angus and Red Angus feeder cattle is here! The industry must differentiate the best Angus and Red Angus genetics from average cattle, and that’s what Top Dollar Angus will do for you!

If you have consistently invested in high-performance Angus or Red Angus genetics, Top Dollar Angus will make your cattle stand out from the pack and get you the premiums you deserve. No matter how you market your cattle, our goal is to create more demand and higher prices for your calves.
COMMITMENT.

Raising quality registered Angus cattle takes commitment. As your genetic supplier, we take that seriously.

That’s why we participate in MaternalPlus®. Through MaternalPlus, we devote extra time to tracking maternal traits beyond those normally required, ultimately targeting greater performance and predictability.

The data we choose to gather through this inventory-based program today sets the stage for reproductive and lifetime productivity tools tomorrow — tools to pioneer new ways of selecting the most profitable animals.

Herd improvement starts with smart decisions. A commitment to the female starts with MaternalPlus. Contact AGI at 816-383-5100 or agi@angus.org for more information.

**ORIgen**

**Fan The Flame... KEEP THE IRON HOT!**

**MARDA BLACKSMITH 683**

- **Was the $24,000 high selling bull in the 2017 National Western Bull Sale in Denver, CO.**
- **Forged from some of the most sought after genetics in the Angus breed, this bull combines Black Granite, 10X, and a full sister to SAV Resource 1441.**
- **He was the highest weaning ET calf with a ratio of 125. With his powerful performance and an exceptional genomic profile currently ranks him the top Black Granite son for WW, YW, $W, $B.**
- **Scanned a 4.6 IMF and a 16.8 RE with a sale day weight of 1408 lbs. Very good scrotal bull with a 43cm.**
- **So fan the flames and keep the iron HOT on Blacksmith who will sire consistency and performance!**

- An absolutely fan favorite of the 2019 Fall Sitz bull sale and $35,000 Top Selling Logo Son. An absolute gem for so many high-quality traits needed for today’s beef business. Stems from a fantastic Pathfinder dam from the highly productive Barbaramere Nell cow family and the calving ease sire Logo who is #1 HP, one of the elite bulls in the Angus breed to $M.
- With performance, WR 119, YR 116 and excellent body length and shape “Logo 8148” has the potential to outperform his sire and become a semen leader. We are very excited about this young standout and he will see extended use in our program.
- Posted an excellent PAP score in a herd that has been testing for over 16 years and “8148” was at the top end of his class with a 34. His feet, legs and disposition are top shelf which will add longevity and fault free cattle with less issues for years down the road.
- If you are looking for progeny that will perform, keep mature cow size in check, add muscle, carcass, and keep the fertility and productivity in your cows this is a bull you need to use.
- Ranks in the top 1% for WW, HP, SM, SW, 2% for YW
- Owned with: Sitz Angus Harrison, MT

**KW Safeway 2020**

06/09/18 reg: 19147673 tattoo: 806

**G A R OBJECTIVE 7125 #**
**SF SPEEDWAY A187**
**SF TIARA X151**

- A star of the 2019 Montana Angus Tour in Western Montana, this son of the popular ORiogen sire Speedway is a paternal brother to the $25,000 half-interest top-selling bull calf of the 2018 SydGen sale.
- With an exceptional low PAP score of 33 at 13 months, Safeway offers low risk for brisket disease and a great candidate for use at high altitude, and those that have seen her consider his dam one of Safeguard’s very best daughters and she is a moderate framed cow that produces big healthy calves with lots of muscle, and eye-appeal.
- “Safeway” is a calving ease bull that marries all the traits important to cattle breeders in a very attractive package with excellent feet and legs, strong level topline, big rear end, tight sheath, large scrotal, square stance and he is a docile animal that should moderate frame size in any herd. No missing pieces from a performance standpoint and only gets better the more you study him.
- Ranks in the top 1% for RADG, SB, 2% for YW, 5% for WW, Marb, REA, 15% for CED, SC, CEM, FAT
- Owned with: Bovagene Rocklin, CA, Wild Kat Angus Stevensville, MT
