SKILL SHORTAGES

The IT Cybersecurity Challenge:
Leveraging today's digital world while staying ahead of the risk — but with fewer resources

AXIAD ID CLOUD MAJOR BENEFITS
- Lower complexity and total cost of ownership
- Operational in days vs months
- Secure access to data and reduced risk of breach
- Easily deployed, maintained and managed
- Simplified user experience to facilitate adoption
- Address IT organizations' resource challenges
- Meet mandate demands & compliance requirements

Whether your organization is working to prevent harmful security breaches or meet critical IT security mandates, doing it right is vital. But deploying and operating a cohesive and integrated secure identities solution is complex — especially in today's digital world.

Even with the most advanced technologies, a piecemeal approach may leave your organization vulnerable. As the risks grow and compliance requirements get more rigorous, deploying a seamless and secure solution becomes increasingly costly, while user experience suffers.

There is a better way

Axiad ID Cloud is a modular and flexible trusted identity solution delivered as a cloud service. By providing organizations with versatile Multi-Factor Authentication (MFA), Axiad ID Cloud enables quick compliance with even the most rigorous mandates and offers the highest levels of security protection against unauthorized access or IT breaches. Our broad and diverse portfolio of products allows us to help organizations across industries cost-effectively implement and manage a mix of user credentials with a range of assurance and authentication levels.

In addition, Axiad ID Cloud now allows virtual smart cards and derived credentials to authenticate users and establish and perform secure digital transactions.

Axiad IDS is a recognized leader and trusted partner, helping financial, government, and enterprise organizations navigate this complex terrain.

Axiad ID Cloud: deployed, managed and operated by Axiad IDS

The Axiad ID Cloud allows your organization to cost-effectively address potential breaches head-on before they happen. Our team of experts have elegantly designed a portfolio of secure solutions comprised of industry-leading products and technologies. As a fully hosted service, our automated cloud reduces error and increases flexibility by eliminating manual setup.

By removing the need to be IT security experts, you are freed to focus on your business. This also mitigates hiring and staffing costs for complex on-premise systems.

And because our experts are managing the set up, a system can be operational in just a few days — versus weeks or months. You will rapidly comply with mandates and security audits so you can go about business as usual.

OUR MISSION: Create business value by enabling the trust, freedom, and confidence needed by organizations and individuals to thrive in today's digital world.

Greater security

The Axiad ID Cloud is a secure extension of your corporate network. A Virtual Private Cloud (VPC) is dedicated to your organization's data. There is no co-mingling of data, which provides extra layers of security protection.

Scalability for predictable and reliable cost

Deployment of a typical security solution requires manual setup and processes, which are prone to human error. Our automated cloud reduces this error and increases flexibility by eliminating the manual setup.

Reduced risk and investment

Implementing and managing identity solutions to protect organizations against breaches is complex. Axiad IDS brings experience and knowledge.

Powered by proven products from Axiad IDS' market leading partners, the Axiad ID Cloud is designed to make it easier to cost-effectively deploy and manage comprehensive solutions while lowering risk and overall investment costs.

The Axiad ID Cloud removes the complexity and enables your organization to conduct business without compromise through a future-proof secure solution.

Trusted Identities

Organizations require identities they can trust to conduct business. Axiad IDS provides these trusted identities. From issuance of the credential to securely managing that credential over time. It is our holistic approach — our ability to seamlessly integrate core components into a single system — that enables organizations to have identities they can trust to protect from IT breach.

Axiad IDS

We provide trusted identity and access solutions that offer our customers:

- The **TRUST** to safely interact online

- The **FREEDOM** to access information from anywhere

- The **CONFIDENCE** to leverage today's digital world
