What’s it for?
To show your ideas and understanding and how these have developed when investigating your scientific question.

How does it work?
1. Work independently or in 2s or 3s. Begin by choosing a colour to write with. Write your question in the centre of the page.
2. Use words, diagrams or pictures to map out what you know about the question you’re about to investigate, add as many as you can.
3. In the middle and/or at the end of your investigation choose a different colour to write with. Add to your map with new things you’ve found out. Change or improve what you had written before.
