Think Five

Looking back and reflect on what went well and what could go even better next time!

What’s it for?
To think about 5 things you did well and what you will do next.

How does it work?
1. On your own, think about the things you think the team did well in asking and investigating the scientific question. Jot these on a sticky note or piece of paper.
2. As a team, bring all of your notes together. Sort them into groups, did you all have similar ideas?
3. Discuss and choose the top 5 things that you think went well when working on your scientific question.
4. Now decide what that means for next time you ask and investigate a scientific question. Pick one thing that you will do differently next time.

Print off the wheel on the next page for cutting out!
