WHY CAN'T MIGRAINE PATIENTS ACCESS COMBINATION THERAPY

TO MANAGE MIGRAINE DISEASE,

patients sometimes need to combine multiple medicines such as:

Preventive medication to stop migraine attacks before they start

Pain medication to cope during attacks

Anti-inflammatory drugs to help end a migraine attack

Known as **"COMBINATION THERAPY,"** the approach has been common in migraine treatment for years.

But now health plans want to limit combination therapy to PROTECT THEIR OWN BOTTOM LINES...

...leaving patients with yet another **STRUGGLE**.

Migraine disease + health plan interference is **<u>not</u>** a good combination for patients.
