

# A GUARANTEED RETIREMENT

WHAT WOULD it cost in terms of the Payments Tax in order to fund a guaranteed retirement for every citizen in the U.S.? If we were to pay \$30,000 per year to every citizen 70 and over, the total bill would be \$840 billion. Doing this would eliminate the need for our current Social Security program. The bottom line is that the Payments Tax for a couple earning \$100,000 would be just \$17 in order for them to insure that they'd receive an extra \$60,000 per year once they were 70 years old.
