ENFORCER GOLD DISCOVERS HIGH-GRADE MINERALIZATION IN NEW VEIN EXPOSURE AT THE MONTALEMBERT GOLD PROJECT

Toronto, Ontario – Enforcer Gold Corp (“Enforcer” or the “Company”) (TSX-V: VEIN; FSE: N071) is pleased to provide an update of its exploration activities at the Montalembert Gold Project, including the discovery of high-grade gold mineralization in a new exposure along the No. 2 Vein.

Visible Gold in Channel Sample on the No. 2 Vein

President & CEO, Steve Roebuck, comments:

“We are pleased to report on the early success of Enforcer’s first field program at Montalembert, including the discovery of an impressive occurrence of visible gold within new exposure 51 m north along the No. 2 vein extension. In addition, preliminary IP results from surveying to the north of the Galena and No. 2 veins indicate that both structures continue for a considerable distance in this direction. The presence of other anomalies outside of the known mineralized areas also highlight the potential for new discoveries. We are very encouraged by these early results and are pushing diligently to advance these targets to the drilling stage. It’s very early days yet at Montalembert, the Company’s large-diameter

core drilling program on the Galena and No. 2 veins began on July 5, 2017.”

“For a brief visual of our current work program at Montalembert, please visit Enforcer’s [Montalembert Video Gallery](#).”

Enforcer commenced its initial induced polarization (“IP”) geophysical survey in early June. A test survey was conducted across the exposed Galena and No. 2 veins to develop a template for testing potential strike extensions of the veins as well as other target areas property wide. Preliminary results indicate that both zones continue to the north and IP chargeability anomalies have also been detected outside of the known mineralized zones. The southern part of the grid is yet to be surveyed. The current survey will cover an ~1.5 x 1.5 km area and is ~70% complete.

Enforcer personnel are ground truthing the IP anomalies by exposing and channel sampling outcrops, with current priority given to Galena and No. 2 vein extensions. Shearing, quartz veining and quartz-feldspar porphyry have now been exposed for an additional 60 m and 75 m north along the Galena and No. 2 veins, respectively. On the No. 2 vein extension, an impressive 15 cm wide occurrence of visible gold occurs within a 1.4 m wide quartz vein hosted within a 3.2 m wide shear zone. The occurrence lies ~51 m north of the 2016 limit of the No. 2 vein exposure. Trenching to further expose the mineralized structures continues and systematic channel sampling is underway.

Please visit the [Montalembert Photo Gallery](#) for an overview of exploration work on the project and additional photos of the new gold occurrence on the No. 2 vein extension.

Qualified Person & QAQC

Enforcer’s President & CEO, Steve Roebuck, PGeo, is a Qualified Person as defined by National Instrument 43-101 and has reviewed and approved the content of this news release.

Rock and core samples are shipped on a regular basis to Activation Laboratories Ltd. of Ancaster, Ontario (“ACTLABS”) for sample preparation and analysis. ACTLABS is an ISO/IEC 17025 (CAN-P-1579) accredited testing laboratory. Assay results will be released in a timely manner upon review and compilation.

All technical information for the Company's Montalembert Gold Project is obtained and reported under a formal Quality Assurance/Quality Control (“QAQC”) program consistent with best industry practices. Details of the program are presented on the Enforcer website at: [Montalembert QAQC](#).

About Enforcer Gold Corp

Enforcer Gold Corp is earning a 100% interest in the Montalembert Gold Project from Globex Mining Enterprises Inc. (TSX: GMX, FSE: GIMN, OTCQX: GLBXF). The 7,300-hectare property is located 125 km west of Chibougamau in Quebec’s prolific Abitibi greenstone belt. The property lies 5 km from a paved highway and hydro-electric power and has easy access to skilled labour, fuel, accommodation and other industry-related services, allowing for relatively low exploration costs. Enforcer has committed over \$2.2M to fund its 2017 exploration program that is expected to run uninterrupted through late fall 2017.
