

Enabling Car Service GDS PNR Writeback

Why and How?

Enable GDS PNR writeback so that you can track and service car service segments booked by your customers on Deem Work Force. By enabling PNR writeback, any changes to a traveler's itinerary whether it's a delayed or canceled flight will immediately update the Car Service segment and adjust the pick-up time accordingly. It's a win-win! Provide your customers with an important service that all travelers need while on the road and grow revenue at the same time.

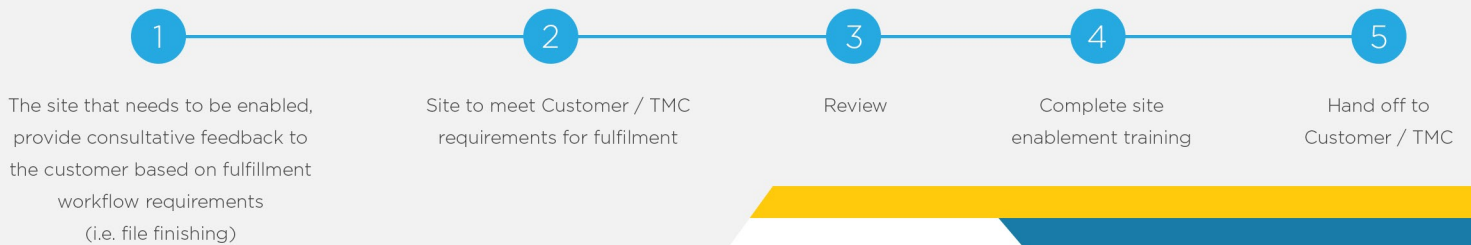

Getting started is easy! Deem provides

1. Automated PNR outputs as best practice templates
 - ▀ Sabre Red or scripts
 - ▀ Apollo scripts
2. Defaults from Saturn that will serve as the basis for the GDS configuration
 - ▀ Active
 - ▀ Passive

** After above has been reviewed by the TMC/customer, they can modify as needed.*

Deem's Professional Services team will provide a one-time enablement process which involves

Customer and TMC - joint discussion topics

1. Determine whether the customer will bring their existing relationships or do they prefer to use the Deem preferred network
2. If customer is new to Car Service, review
 - ▀ Policy
 - ▀ Groups

Deem Support Activities - once TMC/Customer are ready
