Tech With Ted is a unique service for your computers, tablets, smartphones, and other devices. It provides regular visits to your location throughout the year to address necessary maintenance and security as well as any specific technical issues or questions you have. Software, application training and problem solving are included.

The entry level of the service will provide a minimum of four visits per year and support one computer and one additional device (tablet, gadget, or additional computer). Backups of files, photos, and critical information are included. Additional device coverage and visits are available as needed or desired.

Additional Popular Services

Tech Shopping

Buying new computers, printers, smart TVs, and tablets can be intimidating. **Tech Shopping** sits down with you to identify your needs and desires then looks at the latest choices available. A range of options are presented for your final selection and then purchased for you. No box stores or salespersons. It comes with an installation and setup that gets the tech in your house, connected, and working.

Install It

New equipment instructions can be confusing. Especially with so many connection options. TVs, remote controls and media devices are complex. Transferring files and settings from old to new computer equipment and removing personal information need to be done completely and se-

curely. **Install It** makes your purchase operate in your house whether it is a simple tablet and a printer or a complete home office. All installations include training and at least one follow-up visit at no additional charge.

Memories

Events and stories can be told and retold through the wonders of technology. Often times you want to share these in some special form for a particular celebration, event or holiday but don't feel comfortable with the complexity. The **Memories** service offers photobooks, murals, slideshows, and music videos produced from your digital memories. Discuss your ideas and see what's possible.

Everyone has the latest devices and computers. Unfortunately most people are still running them on the network that was installed over a decade ago. To have the family securely run all their gadgets and still stream a movie may require an **Upgrade** service to the old network.
