

The shed ...

On goes the decking, then
the verandah ...

Verandah hand rails
feature repurposed
former conveyor rollers.

Repaired French doors, and
purpose-built window ...

Inside, the roof is not
only insulated but also
lined with second hand
iron.

Formerly a friend's
floorboards – now
repurposed as a door.

Timber floor inside the
shed ... sure is flashier
than our house!

With a little help from friends, the
carport beams move into place

Left over bricks used for
paving around the tank.

And many more features
and artistry than can
fit here (stay tuned for
further posts) ...
