

Our mission is to bring more nature into people's daily lives. We design the best living wall systems that add greenery to any space, indoors or outdoors.

Our intelligently engineered living wall systems can fit almost any wall location, size or shape.

Nuremberg, Germany

Venice Beach, California

PRODUCT FEATURES

Easy Installation

No waterproofing or structural reinforcements required to install hardware

Smart and Safe Watering

Passive irrigation system utilizes natural capillary wicking, which is much more reliable than pumps, drip irrigation lines or catch basins

Lightweight & Slim

Only 8 lb/sqft when fully loaded with plants and water. Protrudes only 3.75” from the wall.

Healthy Plants

Plants can grow throughout the cassette (i.e. not contained to their grow pots), producing a vibrant living wall

Charlotte, North Carolina

INSTALL + MAINTAIN

1

Initial Consultation

- Review project criteria such as timeline, size, budget, design goals, etc.

2

Design Phase

- Select a living wall that fits both your budget and design goals
- Determine plant pattern, irrigation method, and supplemental lighting needs

3

Pre-Installation

- Shop drawing(s), field measurements, MEP documents, etc.
- Source plants and start pre-growing in greenhouses

4

Installation

- LivePanel hardware installed on site
- Coordinate with MEP trades for irrigation and lighting
- After irrigation and lighting are tested successfully, plants arrive on site to be installed

5

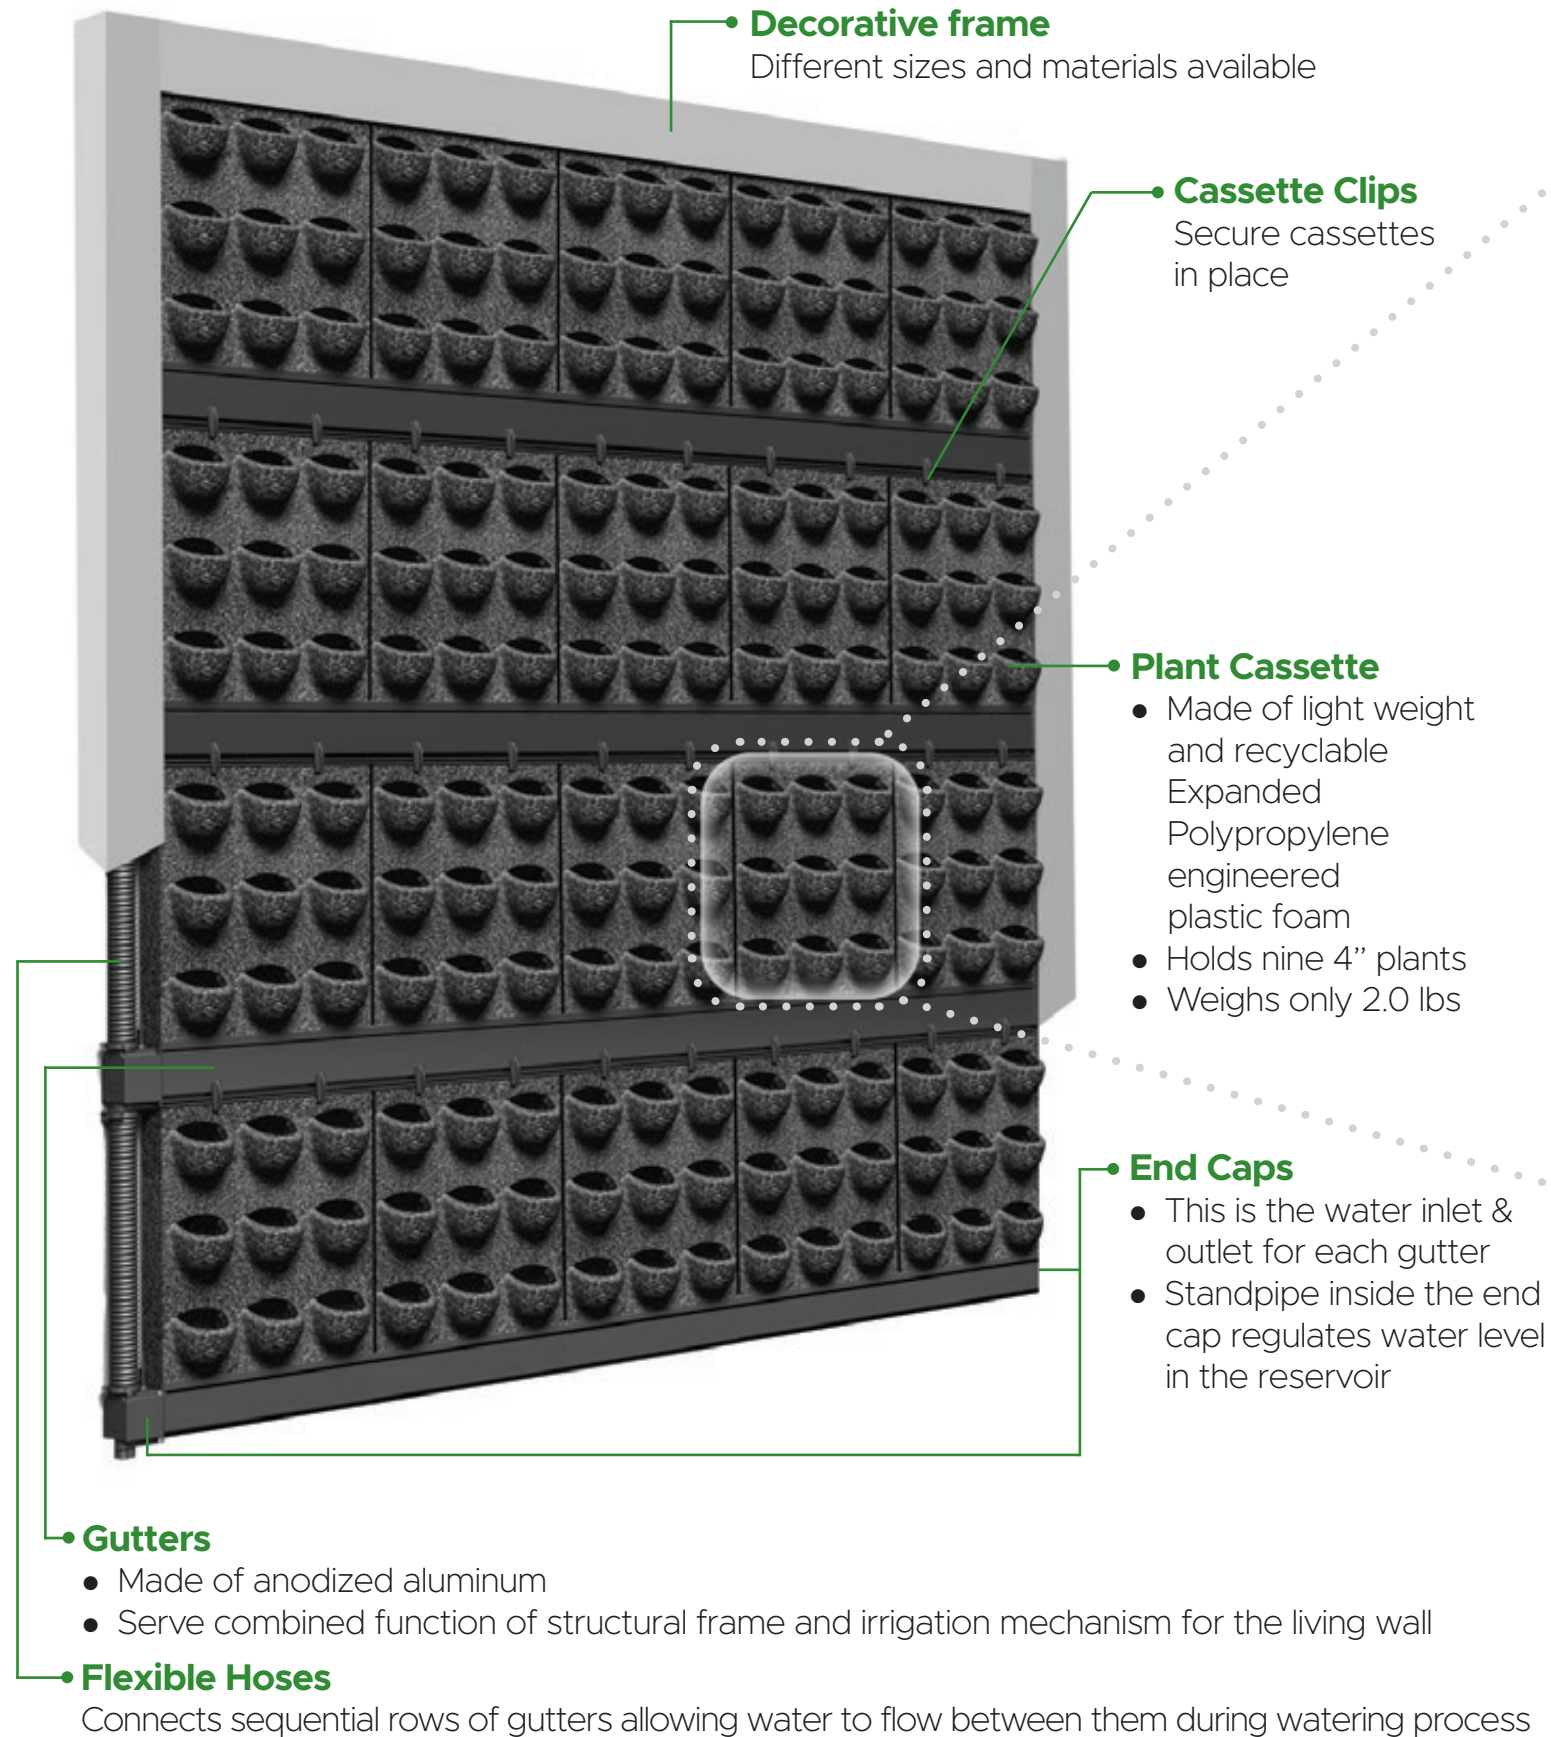

Maintenance

- Every green wall requires ongoing plant maintenance
- Nationwide network of experienced plant maintenance providers
- Hardware and plant warranty

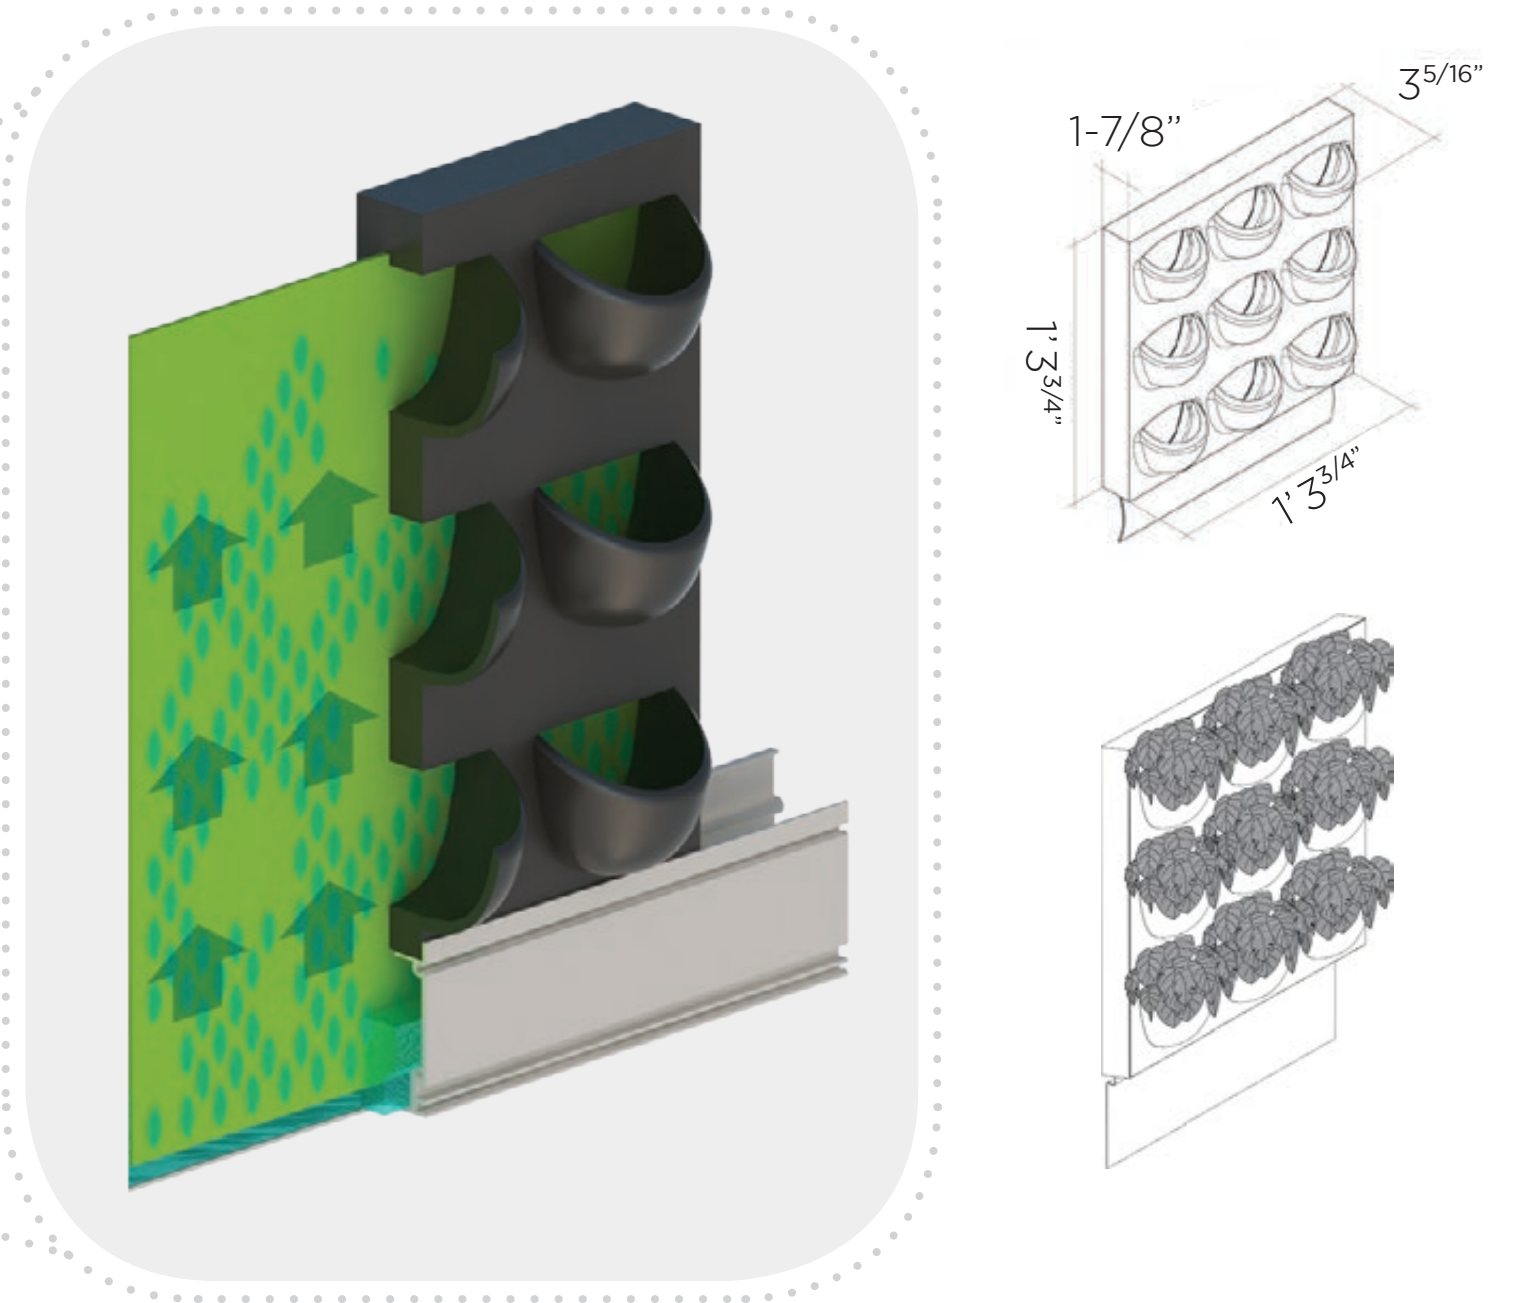

REPRESENTATIVE LIVEPANEL LIVING GREEN WALL

**all walls are custom built to specification*

PLANT CASSETTE

- **PLANTS THRIVE** because their roots are allowed to spread freely throughout each cassette, resulting in a lush and vibrant green wall
- **PLANTS REMAIN HEALTHY** because they sit at a natural growth angle and are supported by the individual plant cups
- **POLYESTER BLEND WICK** supplies even and steady water and the plastic back shell keeps moisture contained

IRRIGATION

Every living wall needs water. There are many different possible irrigation methods and selecting the right one for your project depends on the size of the green wall, accessibility, location, and budget. LivePanel green walls can be manually or automatically watered.

Manual Irrigation

Portable Water Tank

- Only for small and easily accessible walls
- Can use a catch basin for manual drainage
 - + No upfront costs for plumbing, drainage or electricity
 - Ongoing maintenance costs may be higher
 - Possibility for human error

Hose Connection

- Can be a temporary hose or a hard line plumbing pipe with an on/off valve
- Can use a catch basin for manual drainage
 - + Low or zero upfront costs for plumbing, drainage and electricity
 - Ongoing maintenance costs may be higher
 - Possibility for human error

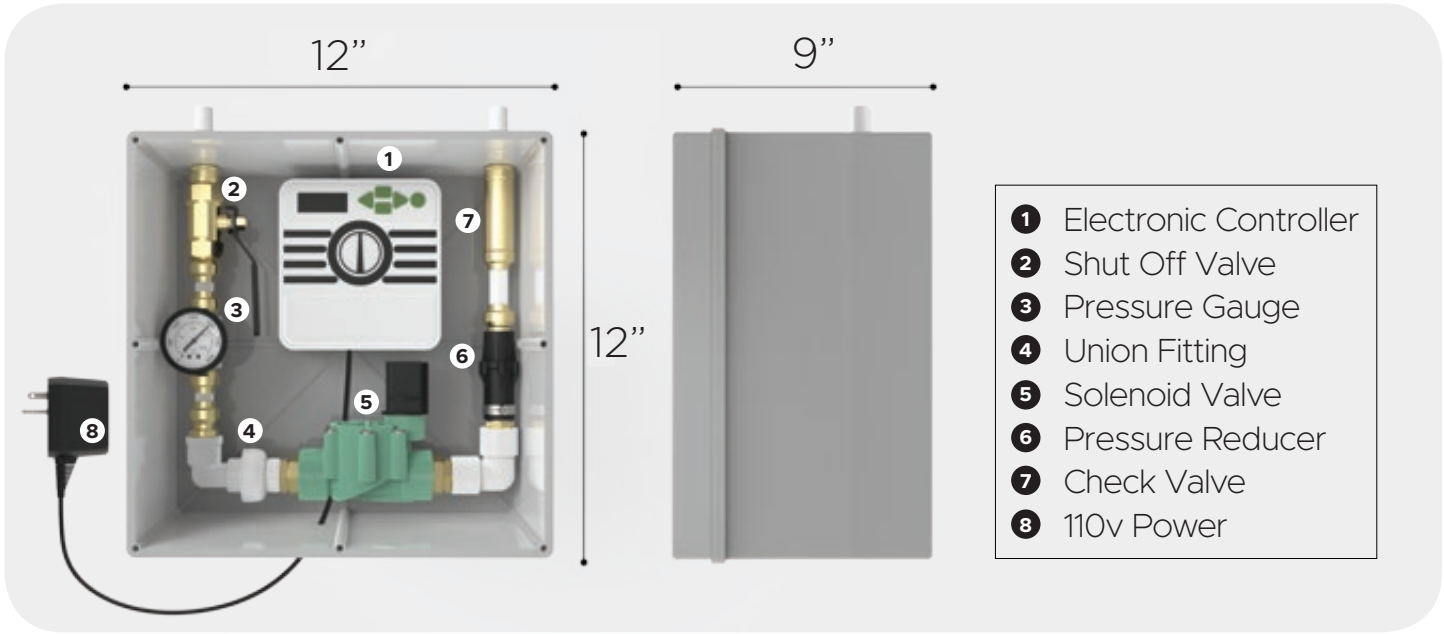

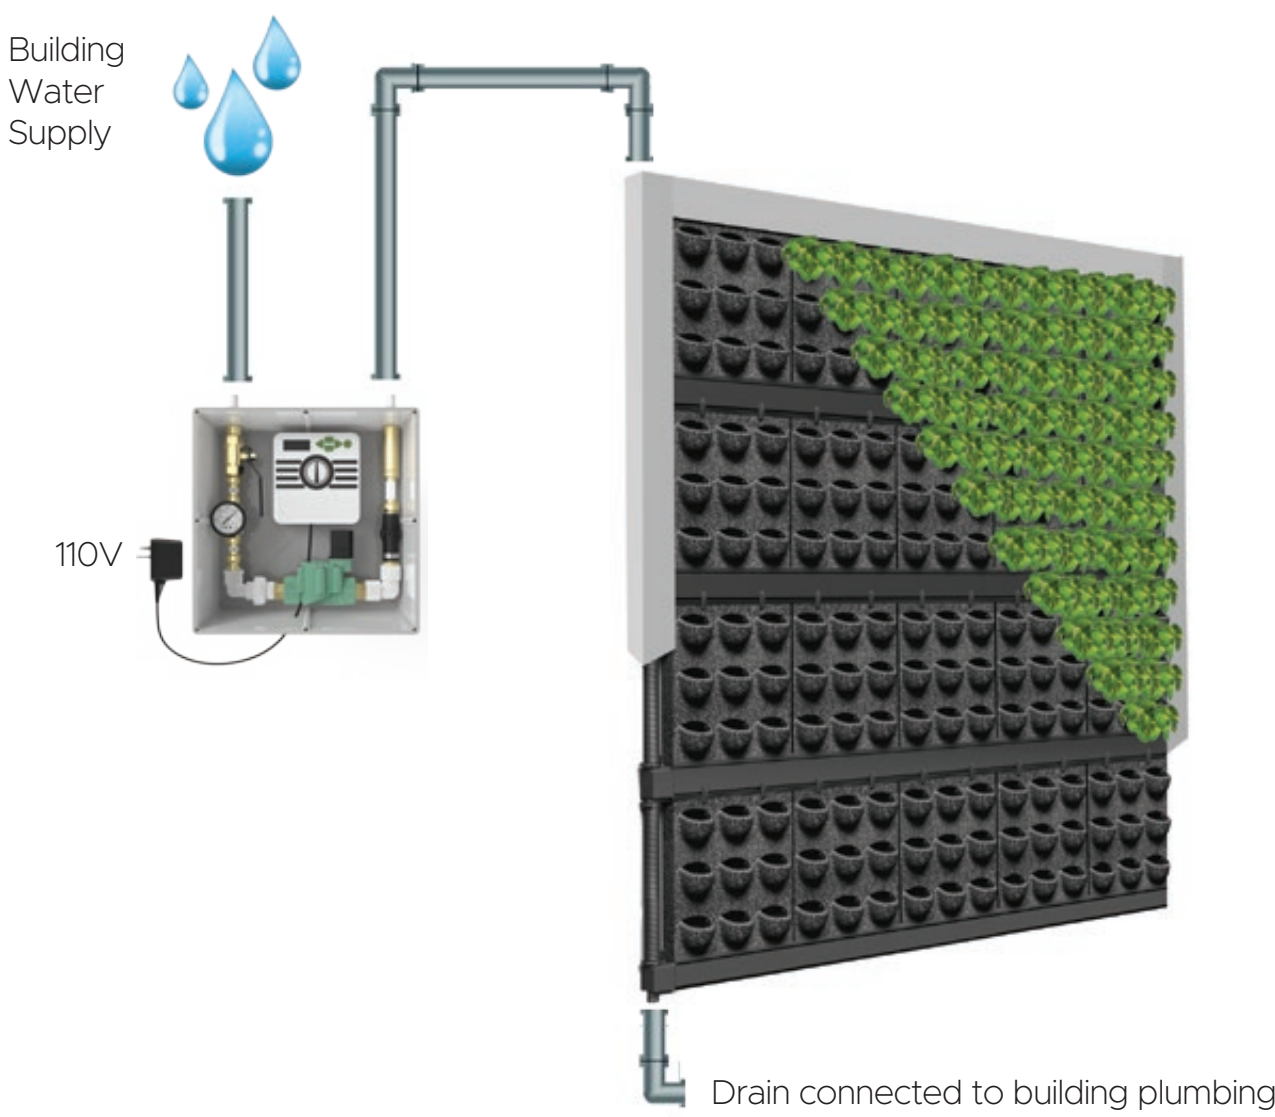

Automatic Irrigation

Irrigation Control Unit (“ICU”)

- Programmable irrigation unit with optional fertilizer injection
- Requires drainage connected to building plumbing
 - + Ensures plants always have water
 - + Lower ongoing maintenance costs
 - Additional upfront costs for plumbing, drainage and electricity

REPRESENTATIVE LIVEPANEL INSTALLATION WITH ICU

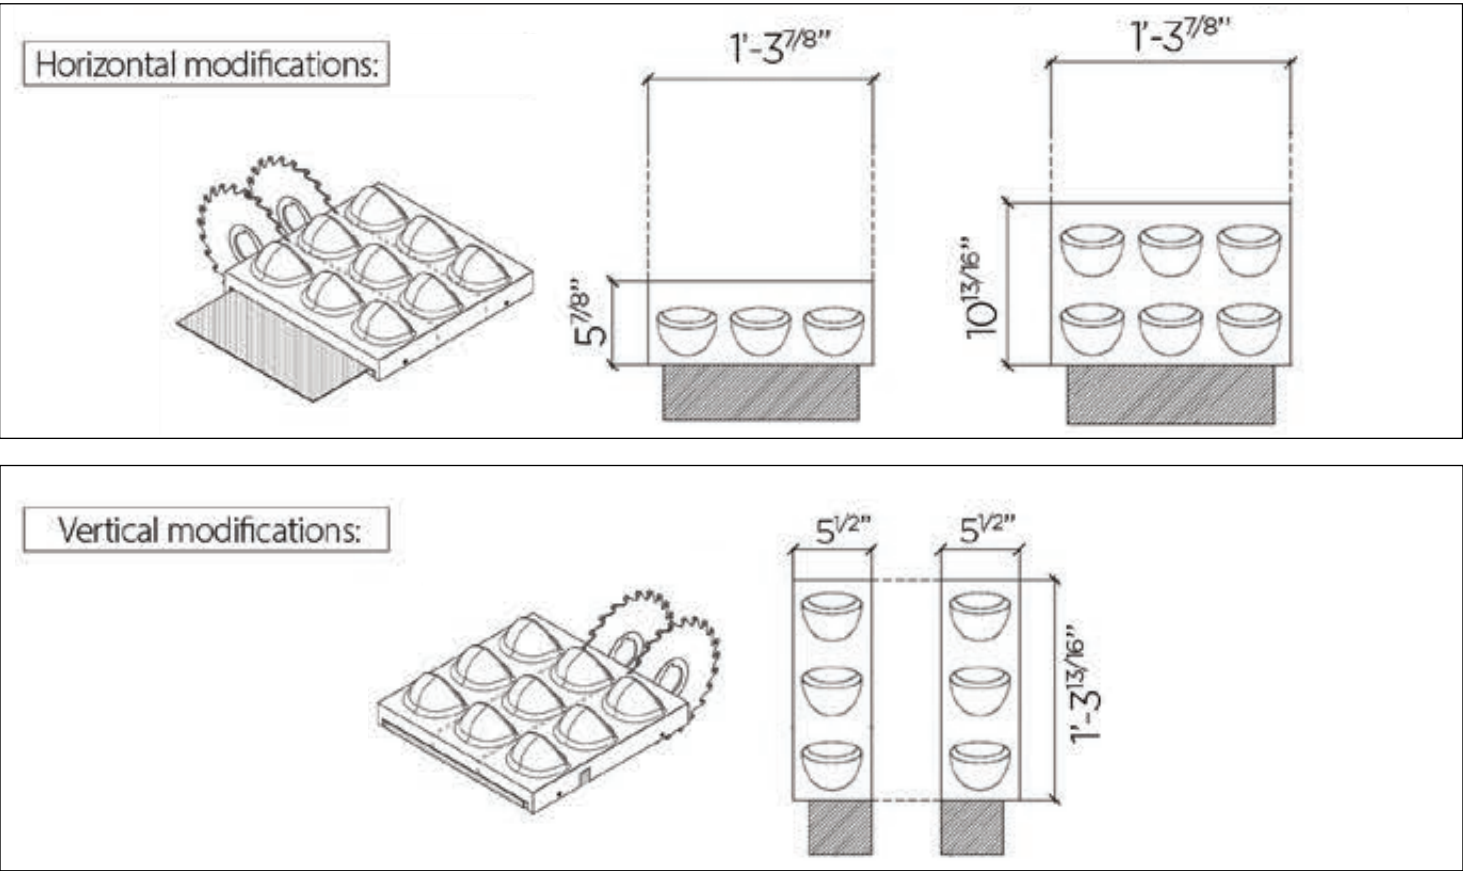

FRAME OPTIONS

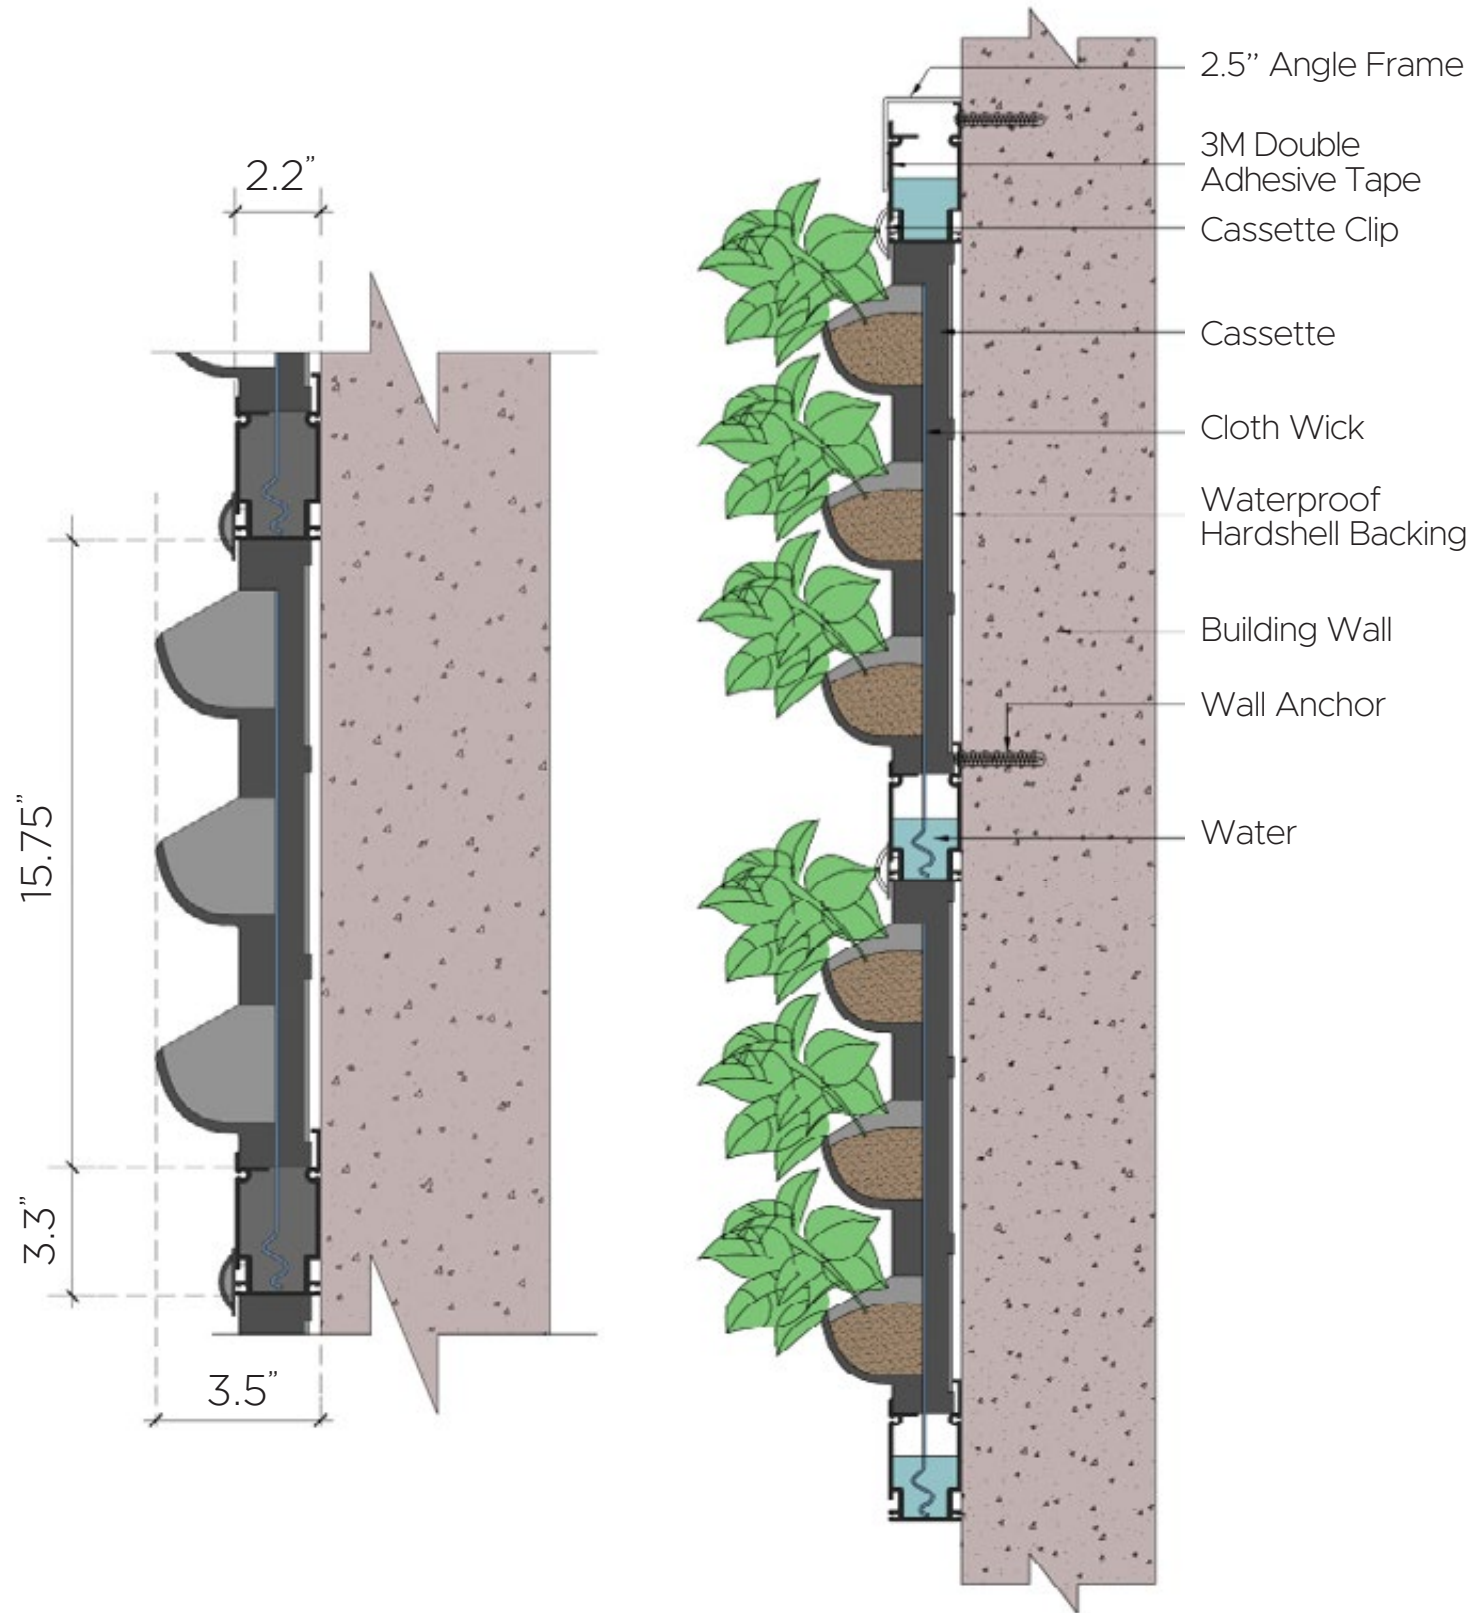

MODIFICATIONS

Plant Cassettes can be cut into one-third pieces, both horizontally and vertically.
LivePanel can get within +/-5" for any specified green wall length or width.

TYPICAL INSTALLATION DETAIL

RECOMMENDED GREEN WALL LED LIGHTING FIXTURES

A minimum of 150 foot candles of light measurable at any point on the green wall surface is recommended. Supplemental lighting may be required. A photometric analysis, taking seasonal lighting changes into account, should be completed to confirm that specified light fixtures will be sufficient

	Track Lighting		Recessed Lighting	Other
				
Model	Eaton L806HO	Phillips LLAB3-VA 39W	Phillips LLABR-VA 22W	Sunlite ST30Y48M10X6R
