| Medtronic 670G Advanced                        | 7-13 | 6 months       | New 670G Version 4.0 (Advance Hybrid Closed Loop), the Guardian Sensor and Link Transmitter | • T1D for ≥ 1 year  
• Using an insulin pump for ≥ 6  
• A1c < 10%                                                                                 | Has set point of 100 and 120 mg/dL  
Automatic correction doses  
Automode exits greatly reduced from current 670G                                                                                                   |
| Lilly Ultra Rapid                               | 1-17 | 8.25 months    | Dexcom G6                                                                     | • T1D for ≥ 6 months  
• MDI  
• A1c 6.5–9.5%                                                                               | This is a randomized trial comparing Humalog with a new faster-acting insulin, LY900014 (both manufactured by Eli Lilly).                                    |
| Extended Wear Infusion Set with 670G Hybrid Closed-Loop | 18-65 | 5 weeks        | Extended wear infusion set                                                    | • T1D for ≥ 1 year  
• Using an insulin pump for ≥ 6 months and 670G pump for ≥ 3 month  
• A1c < 8.5%                                                                                           | Testing a new infusion set which has been designed to be used for 7 days as compared to the 2-3 days of wear with standard infusion sets |
| ACT10N Type 1 Dietary Study                     | 19-30| 10.5 months    | N/A                                                                          | • T1D for ≥ 1 year  
• A1c < 13%                                                                                       | Studying the effect of three diet types on weight management in adults (low-carb, low-fat, and Mediterranean).                                               |
| Type 2 Diabetes Pediatric Pharmaceutical Studies | 10-17| 1 year         | N/A                                                                          | • T2D                                                                                     | Two different randomized 50:50 studies  
• Study #1: DPP4 inhibitor  
• Study #2: SGLT2 inhibitor and DPP4 inhibitor                                                                                                    |

Not interested in any of the above studies, but interested in research?
