NOD STUDY

Stanford Medicine is currently enrolling for an NIH-sponsored research study to learn more about the relationship between new onset hyperglycemia and diabetes (NOD) and pancreatic cancer.

YOU MAY QUALIFY IF:

- You are between 50 and 85 years of age.
- You have been diagnosed with elevated blood sugar (blood glucose level 126 mg/dL or higher).
- You are not on treatment for or have a current diagnosis of any cancer.
- You are currently not on chronic or acute oral steroids.
- You do not have a recent (within 1 week) intra-articular steroid injection. Allowed: nasal topical steroids, oral budesonide, ophthalmic.
- You do not have any significant medical illnesses.

STUDY PARTICIPANTS MUST AGREE TO:

- Complete a set of questionnaires about your health and medical history
- Provide a blood sample (about 2 teaspoons) to confirm eligibility at baseline;
- Complete these questionnaires and provide additional blood samples (about 3 1/2 tablespoons) at three follow-up visits.
- This will take at most 45 minutes per visit.
