Executive Summary

Over the course of the last two decades, investment in Oregon's public schools has continued to decline to a point where independent rankings have placed Oregon schools near the bottom in the nation for school funding.

Prior to 1990 and the passage of Measure 5, Oregon's school funding relied heavily on local property taxes. Today, years of recession-related cuts, on top of decades of disinvestment, have taken a toll: instead of making public education a priority, Oregon has some of the largest classes, shortest school years and lowest graduation rates in the country.

In order to catch up to the national average, let alone rank near the top with states such as Massachusetts, Oregon would need to invest billions more per biennium.

This report gives an overview of how schools in Oregon are funded, illustrates the consequences of disinvestment in public education, and offers comparisons to states that are committed to better funding their schools. Included as an appendix is a county-by-county breakdown so readers can get a better idea of what's missing from their local school budgets and spending plans.

Key Findings

- In 2014-2015 Oregon had the third largest classes in the country. Oregon's 20.7 student-to-teacher ratio was about one-third higher than the national average (15.8).¹
- In the 2014-2015 school year, Oregon students averaged 169.9 days in the classroom. Most states require a minimum 180 days per school year, two full weeks longer than what the average Oregon student receives.
- Oregon used to have more than 1,200 career and technical education programs, but now there are fewer than 700 statewide.²
- Since 2008, one in 20 schools has closed or consolidated, which means fewer kids are going to neighborhood schools and transportation costs are higher.³
- Education Week ranked Oregon 35th in school funding, with a D+ grade.⁴
- In 2013-14 the National Center for Education Statistics ranked Oregon's graduation rate fourth lowest in the country.⁵
- The Quality Education Model, the guiding document behind school funding in Oregon, identifies a \$2 billion funding gap in 2015-2017. That much investment would move Oregon up to around 15th in per-pupil funding for K-12 — Oregon's ranking before Measure 5 took effect.⁶
- To equal the investments made in Massachusetts, Quality Count's top-rated state, Oregon would have to spend around \$3 billion more per year on K-12 education, or \$6 billion per biennium.⁷

Conclusion

How Does Oregon Rank?

Last year, when Oregon earned a “D+” in funding from Education Week’s annual ‘Quality Counts’ state-by-state analysis,⁸ economic observers were not surprised. That’s because of the manner in which schools in Oregon are funded.

Population Growth and Recession

In Oregon, most K-12 funding comes from state income taxes (~60%) and local property taxes (~30%); however, state investment in both K-12 and higher education has failed to keep up with population growth, and the funding model is especially vulnerable to recession.

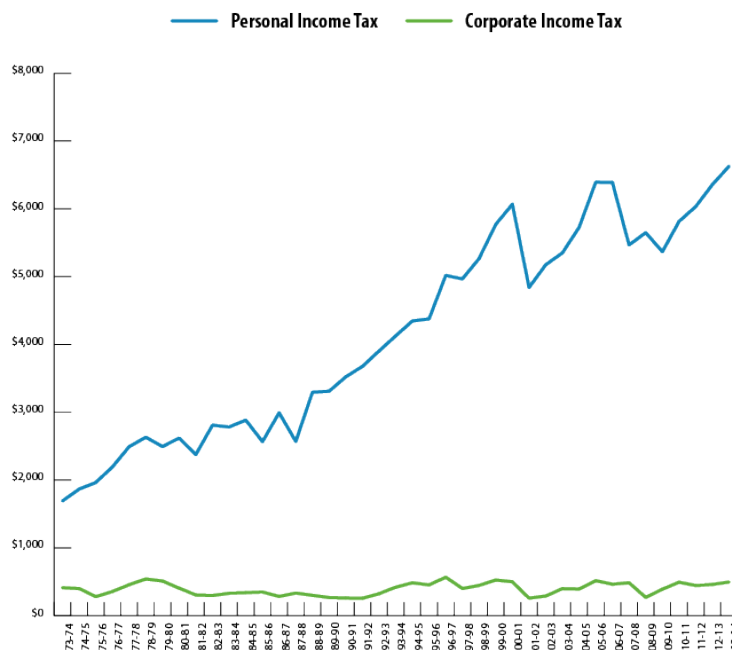

Most K-12 funding comes from the state, but Oregon devotes only a small portion of the state all-funds budget to education. In 2013, Oregon ranked dead last (50th) in the share of the state budget going to education (combined K-12 and higher education), and 43rd in the share of the state budget going to K-12.⁹

Measure 5

Ballot Measure 5 (1990) cut Oregon’s property tax rates and shifted the primary responsibility for funding schools from local governments to the state level. Since that time, funding for Oregon schools has not kept up with other states.

Before Measure 5, funding for public education in Oregon relied heavily on local property taxes. But in 1990, after the passage of Measure 5, the state shifted the primary source of school funding from property to income taxes. Today, about twice as much K-12 funding comes from state income taxes as from local property taxes.

Oregon tax revenue in millions, inflation adjusted to 2014 \$

9 National Association of State Budget Officers, State Expenditure Report: Examining Fiscal 2012-2014 state spending.

Salem-to-Salem Comparison

Massachusetts consistently ranks at the top of student achievement metrics such as reading and math scores, postsecondary degree attainment, and AP test scores. In Salem, Massachusetts, students are getting ahead while students in Salem-Keizer, Oregon, are being left behind.

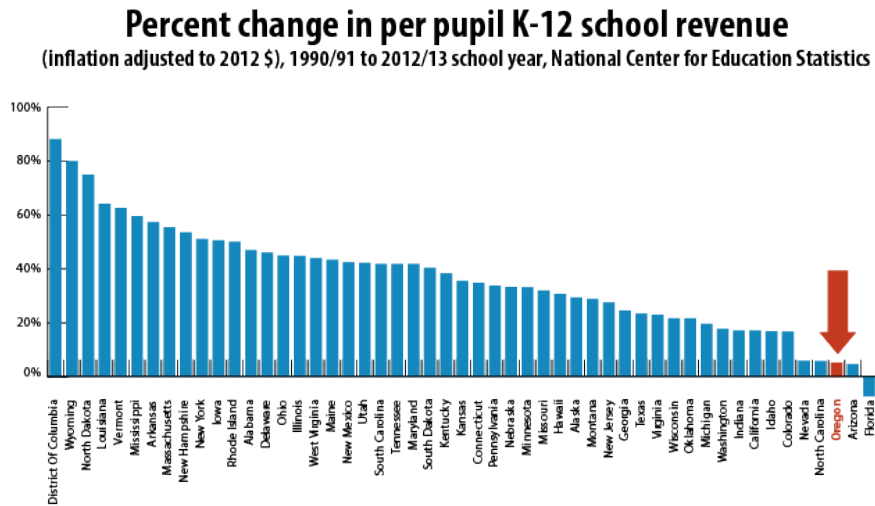

Oregon is unable to keep up with education funding in large part because corporate income taxes are so low. While personal income tax collections have grown over time, corporate income taxes have not. Oregon is currently 50th in the nation in effective taxes paid by corporations.¹⁰

Because income taxes are more sensitive to economic conditions, the impact of this shift has left Oregon's K-12 system more vulnerable to economic downturns. This has resulted in major cuts to funding, especially during times of economic recession. Hiring new teachers during recoveries, only to cut them during the next recession, is not the way for Oregon's children to learn. This is an issue that is relatively unique to Oregon,

10 Anderson Economic Group. 2016 State Business Tax Burden Rankings. Accessed http://www.andersoneconomicgroup.com/Portals/0/AEG%20Tax%20Burden%20Study_2016_FINAL.pdf; Council On State Taxation. where we rely more on income taxes to fund public education than any other state.¹¹ When the prolonged recession forced mid-year budget cuts, Oregon cut more funding from education than any other state.¹² Even though the Legislature increased education funding for 2015-17, there's still a large funding gap and a long way to go to make up for the years of underfunding.

Impact

The impact of Oregon’s funding structure and resulting disinvestment has had serious consequences for Oregon’s students. Important programs and strategies to prevent dropout and increase graduation have suffered; school offerings have decreased; class sizes have risen to some of the largest in the nation; libraries and other foundational tools for instruction have disappeared; investment in school infrastructure has sharply declined—which has created significant safety concerns¹³ — and opportunity gaps, sometimes referred to as achievement gaps, have widened.

Oregon no longer provides the kind of well-rounded education that other states are able to offer. For example, one study shows that 20% of K-12 Oregon public schools did not offer any regular, stand-alone arts courses and only 6% provided instruction in all five disciplines of dance, media, music, theater and visual arts.¹⁴ Considerable research documents the many benefits arts education provides to all students: improved academic achievement, greater leadership and social skills, enhanced critical thinking and sharper problem solving skills.

While it is true that many states struggle to provide adequate funding for public education, Oregon falls below the average. When ranked against other states and controlling for the cost of living, Oregon just barely makes it out of the bottom 10, ranking 35th overall in the nation.¹⁵

Class Size and Staffing

Compared against national averages, Oregon falls short when it comes to available classroom instructors,

 15 Education Week, Quality Counts 2016

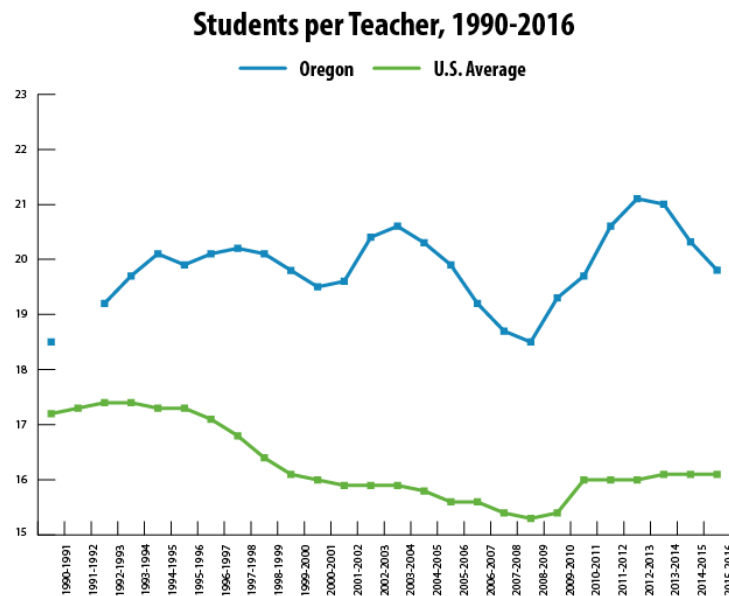

class sizes and instruction time. During the 2014-2015 school year, Oregon had the third highest ratio of K-12 students per teacher in the country. Oregon's 20.7 student-teacher ratio was roughly one-third higher than the national average (15.8).¹⁶ During the 2014-15 school year, only 6 percent of the elementary school classrooms had fewer than 16 students, while 44% had more than 25 students.¹⁷

It's not just class sizes that have been impacted. Districts have eliminated guidance counselors, support staff and library/media positions over the last decades — leaving some nurses and librarians carrying caseloads in the thousands. In 2014-15, Oregon schools averaged one guidance counselor for every 515 students. The recommended ratio is 1 guidance counselor for every 250 students.

School nursing ratios are especially alarming. Oregon has one of the worst nurse/student ratios in the country. In Massachusetts, state law requires a nurse in every school. By contrast, in the 2014-15 school year, there was only one school nurse for every 4,664 Oregon students. Between 2012-13 and 2014-15, school districts cut 39 nurses.¹⁸ Today, 40% of Oregon's school districts have no nurses at all.¹⁹

To illustrate the impact, one study in Kentucky found students were more than three times as likely to get sent home when they were seen by an unlicensed school employee rather than a nurse.²⁰ That's because school staff with no medical training are naturally going to err on the side of caution when dealing with a child who is ill or injured.

Across the board, students are not getting the one-on-one attention they need to succeed. The confluence of large class sizes, fewer counselors and nurses and the reduction of library/media staff has a direct impact on our students, especially when it comes to increasing graduation rates, improving outcomes and closing opportunity gaps.

Instructional Time

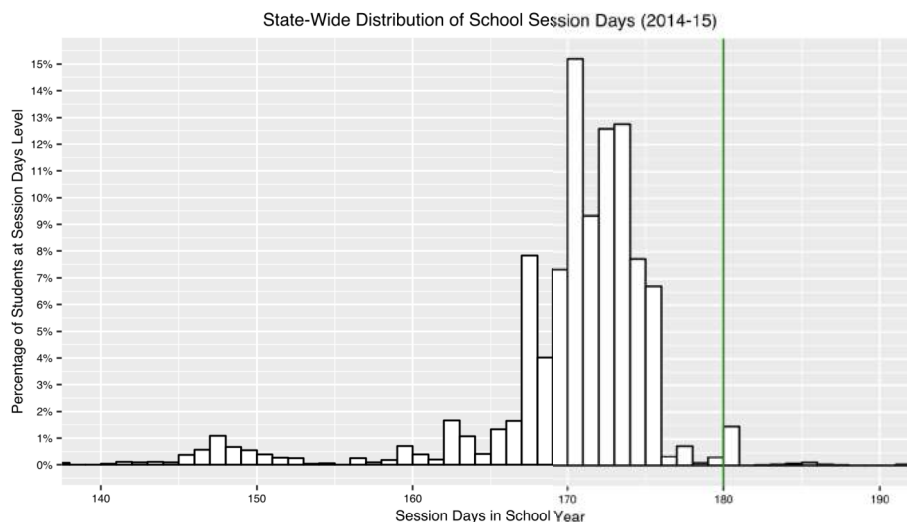

According to the Education Commission of the States, most states require at least 180 days of classroom instruction per school year.²¹ Oregon does not have a minimum school year length but does have standards for the minimum amount of instructional hours permitted per year and the maximum number of hours per day.²² The effective minimum for K-8 students in Oregon is only 112.5 days.

Grades	Minimum number of instructional hours per year	÷	Maximum number of instructional hours per day	=	Minimum number of days in the school year
Grades K-8	900		8		112.5
Grades 9-11	990		8.5		116.5
Grade 12	966		8.5		113.6

This has allowed some districts to fall behind. In 2014-2015, only two out of 197²³ school districts in Oregon offered a 180-day school year: Malheur County SD 51 and Powers SD 31 (125 students). All others had fewer school days than required by most states.

This has had a staggering impact. On average, K-12 students in Oregon receive one year less of instruction compared to students in other states.

We know instructional time has an impact on student achievement. According to the U.S. Department of Education (DOE), increased learning time improved literacy and math achievement when instruction was led by certified teachers.²⁴ Perhaps more importantly, increased instructional time helps poorly performing students and those with learning disabilities the most. According to the DOE study, "Increased learning time improved the literacy achievement of students performing below standards and the social-emotional skills of students with attention deficit/hyperactivity disorder."

Infrastructure and Safety

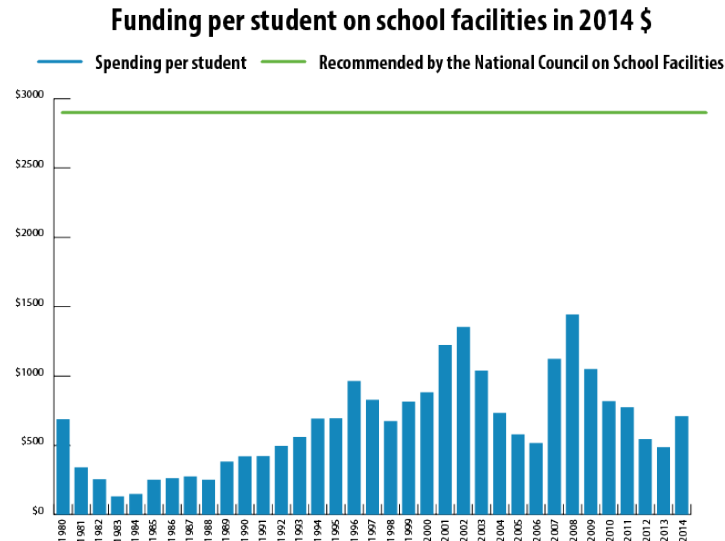

Since the cuts in the 1990s and 2000s, school districts have been forced to save money by closing and consolidating schools. During the 2008-09 school year, districts operated 1,306 elementary, middle and high schools. By 2013-14, that number declined by five percent. Closing and consolidating one in 20 schools means fewer kids are able to attend schools in their local communities and transportation costs increase.

In addition, many of Oregon's schools are old and sorely in need of repair or replacement. A 2014 task force found Oregon schools have \$7.6 billion in deferred maintenance costs.²⁵ The National Council on School Facilities recommends schools spend an average \$2,900 dollars per student per year on replacing and renovating school buildings, at a minimum²⁶. Since 2010, Oregon schools have averaged only \$667 per student.²⁷

A recent report issued by the Oregon Education Association, the PTA and Children First for Oregon uncovered significant risks to Oregon students based on the condition of many of the states' schools. In addition to elevated levels of lead exposure, other areas of concern include higher than average levels of radon, the presence of mold and other asthma triggers, and risks associated with earthquake preparedness.

The report noted some communities have successfully passed bonds to address some of these needs, but those bonds rarely cover all the infrastructure needs of a district, and all students, regardless of ZIP code, deserve healthy and safe learning environments.

These safety concerns have a direct impact on student learning. There is a high correlation between student health and achievement.²⁸ Safer schools mean healthier students, and healthy students learn better.

Career and Technical Education

One of the consequences of a poorly funded public education system is the economic impact on local communities. Across the state, employers have unmet needs for skilled workers. By expanding and strengthening Career and Technical Education (CTE) programs, more people would have the skills to work in good, family wage jobs. To effectively prepare students to enter the workforce, CTE programs require state-of-the-art equipment that must be maintained and experienced instructors who are certified in their fields.

Unfortunately, budget cuts have reduced technical training opportunities. Because CTE programs are more expensive to run and serve smaller numbers of students than general education courses, they are often the first programs to face the chopping block. In the 1990s, there were 1,200 approved high school CTE programs — today there are only 690.²⁹

Career & Technical Education Programs in Oregon

What Does Good Funding Look Like?

It's no accident that top-ranked states like Massachusetts, New Jersey and Vermont also have better funded schools. In Oregon, the Quality Education Commission has mapped out a blueprint for success. The Quality Education Model relies on expert opinion, best practices and economic modeling to determine how much is needed to fully fund our schools and improve learning outcomes for Oregon's students.

The Quality Education Model

Evidence has shown that continued disinvestments have had an impact on our schools and students — but how much should Oregon be spending on education? The Oregon Legislature created the Quality Education

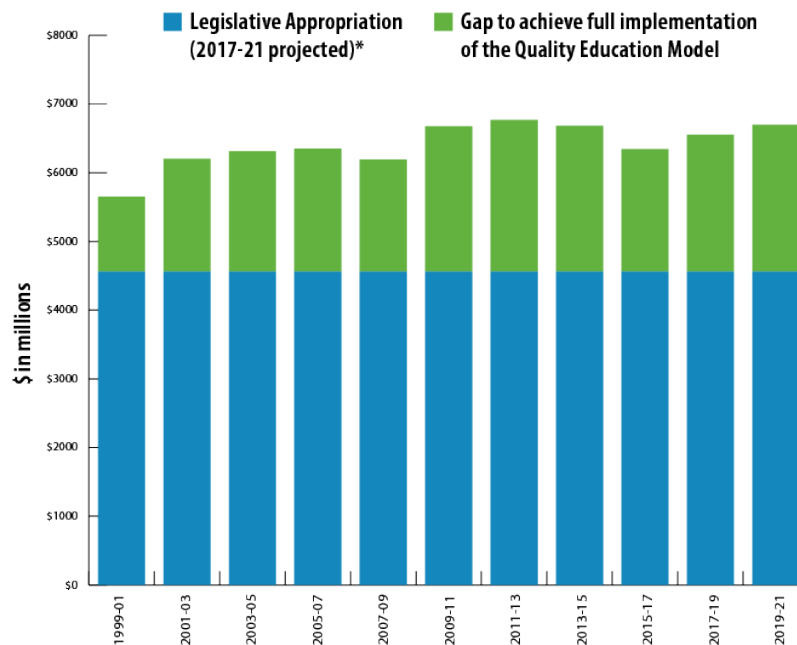

Commission to answer that question. The commission is composed of education experts, including K-12 and college administrators. Since 1999, the commission has released a report every two years on the amount of funding needed to ensure the state’s system of K-12 public education meets Oregon’s education goals.³⁰

Funding requirements are determined from the Quality Education Model (QEM). The QEM is a computer simulation based on real-world data like the costs of school programs, adequate staffing and time for professional development and collaboration, school supplies, computers with internet, and building maintenance. Based on “prototypical” elementary, middle and high schools with funding based on research and best practices, the QEM describes the resources required to deliver a quality education to all of Oregon’s K-12 students, no matter where in the state they live.

Funding Gaps

The model concludes that at least \$17 billion is needed in the 2017-19 biennium to fund Oregon K-12 schools at optimal levels. About 42% of that funding is expected to come from local and federal sources, leaving \$9.97 billion in funding needed from the state. This represents a \$1.99 billion (\$1 billion per year) increase from the current service level.

This funding gap is nothing new. Since 1999, Oregon has fallen well short of what’s needed to fully implement the Quality Education Model.

Filling the Gaps

Years of underfunding have left generations of kids behind and done serious harm to Oregon’s economy. Restoring funding to Oregon schools is critical. According to the QEM, these are the investments required to deliver a quality education to all Oregon K-12 students.

- Lower class sizes in elementary schools: \$361 million
- Instructional improvement in all schools (e.g., mentoring, peer review): \$281 million
- Smaller classes in middle and high schools: \$278 million

- Additional resources for special education and alternative education: \$242 million
- More time for teacher collaboration: \$121 million
- Increased maintenance to better maintain buildings: \$93 million
- Additional counselors in all schools: \$66 million
- Added professional development for educators and building leaders: \$50 million
- Technology improvements: \$33 million
- Additional summer school for struggling students: \$31 million

Conclusion

There is no denying the research: Public education is a good investment. People with more education tend to get better jobs, earn more money and be in better health. Education fuels economic growth. In independent surveys, corporate executives report that an educated workforce is one of the most important factors when they decide where to locate operations.

Yet, Oregon continues to fall short. Consider:

- The Quality Education Model, the guiding document behind school funding in Oregon, identified a \$2 billion funding gap in 2017-19.
- To equal the investment made in Massachusetts, a state with strong education outcomes, Oregon would have to invest \$3 billion more per year in K-12 education, or \$6 billion per biennium.
- To get class sizes down to the national average, Oregon would have to add nearly 7,500 educators. To get into the top 10 smallest class sizes in the country, like Massachusetts, Oregon would need to add 15,500 more educators.
- Each additional week of school costs about \$100 million a year. Reaching the minimum required for most states would cost around \$500 million per biennium. Adding a month to the school year would cost \$800 million per biennium.
- Additional investment is also needed to provide our students with instructional assistants, guidance counselors, librarians, and other school staff.
- School buildings are crumbling and urgently need to be renovated or replaced. Oregon schools have deferred \$7.6 billion in facilities maintenance.

Compared to other states, Oregon ranks near the bottom for funding. Oregon's education system needs major investments, especially if we want our students to have the same opportunities as others from across the country.

The State of Oregon

Funding: The 2014-15 national average for public school funding per student was \$12,578.¹ By contrast Oregon schools spent \$10,615 per student which is 15.6% below the national average.

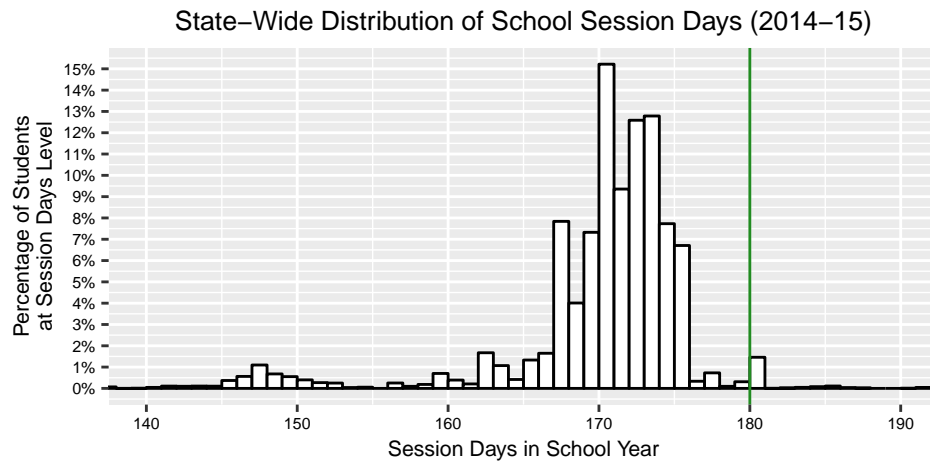

Class Size: The 2014-15 median class size in the State of Oregon was around 26 students with 46.8% of classes having 26 or more students and 6.1% of classes having 36 or more students. The state had a student/teacher ratio of 22.5 which is 42.4% above the national average of 15.8 students per teacher.

Support Staff: The following table summarizes students per staff member for various support categories.

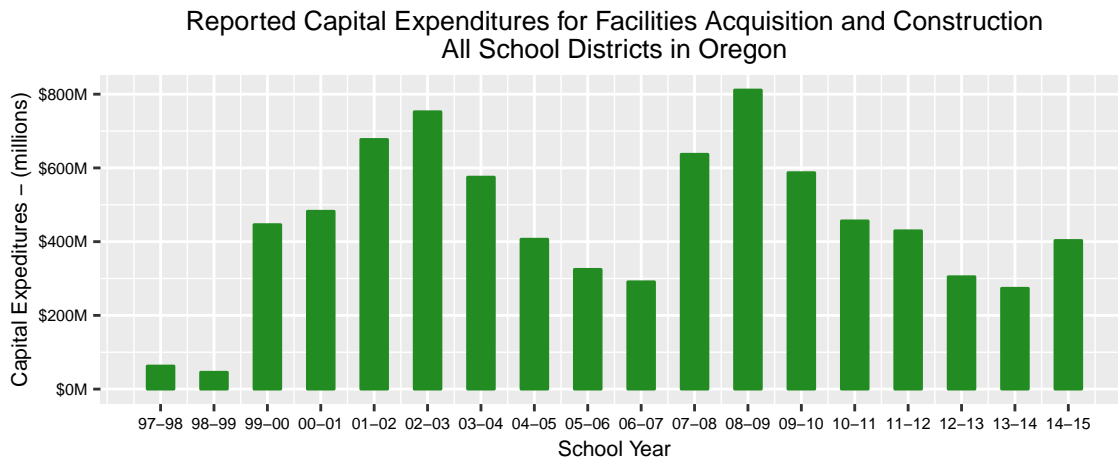

Instructional Assistant	Guidance Counselor	Library/Media Staff	Nurse
65	549	674	4,635

Graduation Rate: The 2014-15 high school graduation rate for the State of Oregon was 78.4%.

Length of School Year: The majority of states require 180 days of student instruction.² This chart shows the distribution of session days for all students in the State of Oregon with the 180-day ideal marked in green.

Capital Spending: Spending on facilities, acquisition and construction in the State of Oregon were \$747 per student in 2014-15. This is 74.2% below the annual \$2,900 per student recommended by the *2016 State of Our Schools* report³. The chart below shows historical capital spending levels.

Baker County

Funding: The 2014-15 national average for public school funding per student was \$12,578.¹ By contrast Baker County spent \$11,715 per student which is 6.9% below the national average.

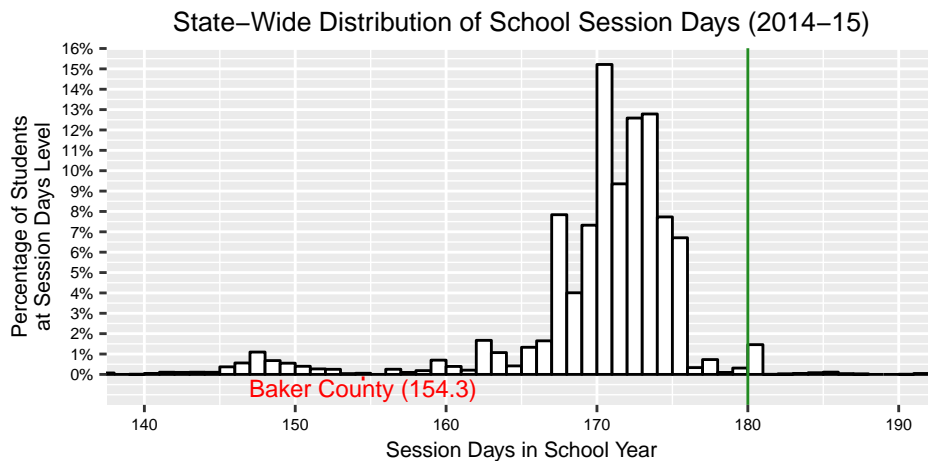

Class Size: The 2014-15 median class size in Baker County was around 21 students with 18.6% of classes having 26 or more students and 1.1% of classes having 36 or more students. The county had a student/teacher ratio of 17.7 which is 11.8% above the national average of 15.8 students per teacher.

Support Staff: The following table summarizes students per staff member for various support categories.

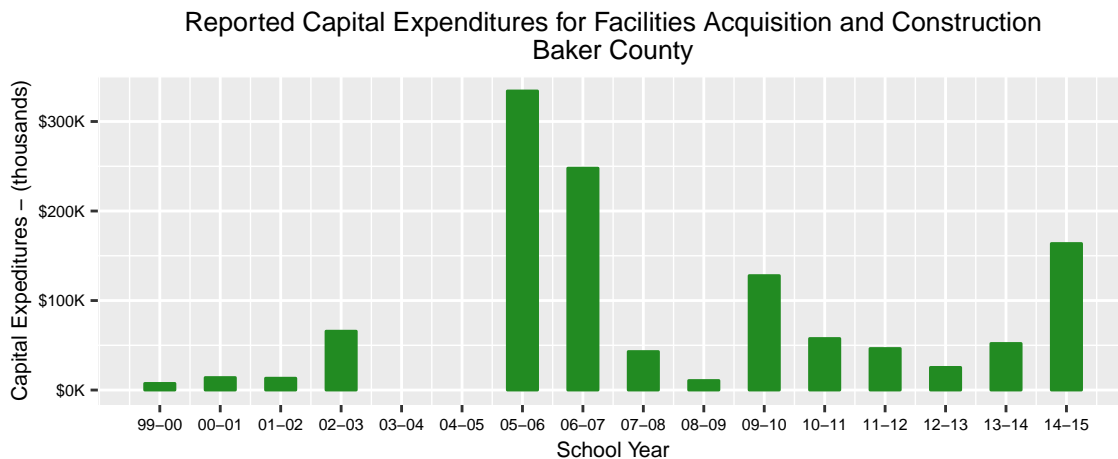

Instructional Assistant	Guidance Counselor	Library/Media Staff	Nurse
45	457	520	6,718

Graduation Rate: The 2014-15 high school graduation rate for Baker County was 81.6%. This is 4.1% above the state graduation rate of 78.4%.

Length of School Year: The majority of states require 180 days of student instruction.² This chart shows the distribution of session days for all students in the State of Oregon with the 180-day ideal marked in green.

Capital Spending: Spending on facilities, acquisition and construction in Baker County were \$78 per student in 2014-15. This is 97.3% below the annual \$2,900 per student recommended by the 2016 State of Our Schools report³. The chart below shows historical capital spending levels.

Benton County

Funding: The 2014-15 national average for public school funding per student was \$12,578.¹ By contrast Benton County spent \$10,615 per student which is 15.6% below the national average.

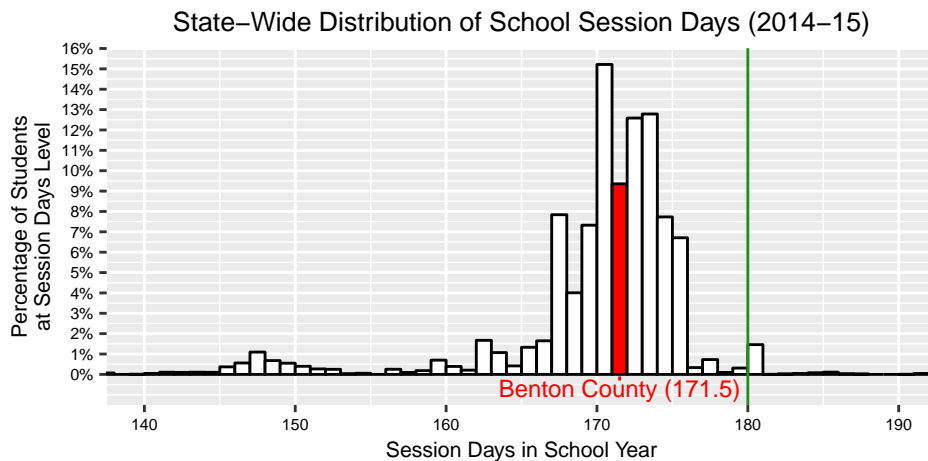

Class Size: The 2014-15 median class size in Benton County was around 26 students with 50.6% of classes having 26 or more students and 6.8% of classes having 36 or more students. The county had a student/teacher ratio of 23.0 which is 45.8% above the national average of 15.8 students per teacher.

Support Staff: The following table summarizes students per staff member for various support categories.

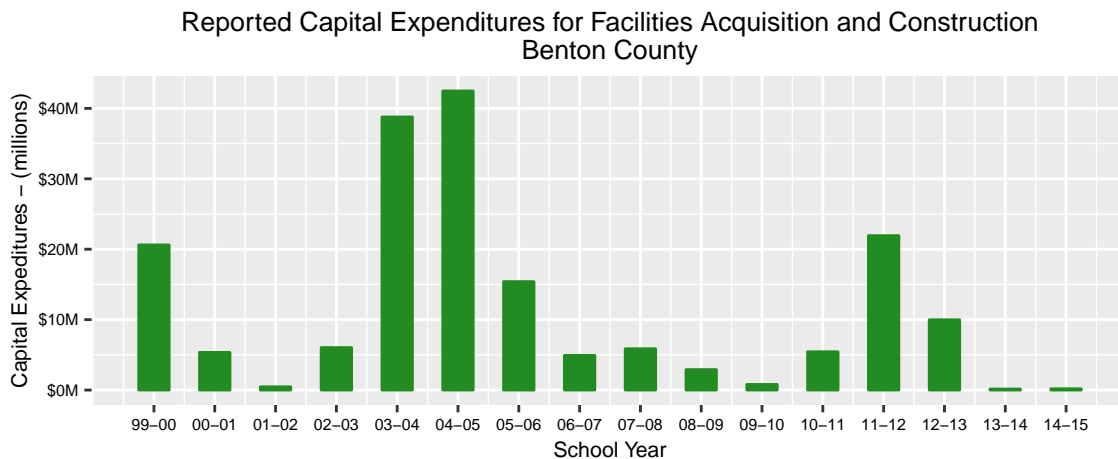

Instructional Assistant	Guidance Counselor	Library/Media Staff	Nurse
56	581	985	No staff

Graduation Rate: The 2014-15 high school graduation rate for Benton County was 85.1%. This is 8.5% above the state graduation rate of 78.4%.

Length of School Year: The majority of states require 180 days of student instruction.² This chart shows the distribution of session days for all students in the State of Oregon with the 180-day ideal marked in green.

Capital Spending: Spending on facilities, acquisition and construction in Benton County were \$20 per student in 2014-15. This is 99.3% below the annual \$2,900 per student recommended by the 2016 State of Our Schools report³. The chart below shows historical capital spending levels.

²<http://www.ecs.org/clearinghouse/95/05/9505.pdf>

³http://www.21csf.org/best-home/docuploads/pub/331_StateofOurSchools2016.pdf

Clackamas County

Funding: The 2014-15 national average for public school funding per student was \$12,578.¹ By contrast Clackamas County spent \$10,275 per student which is 18.3% below the national average.

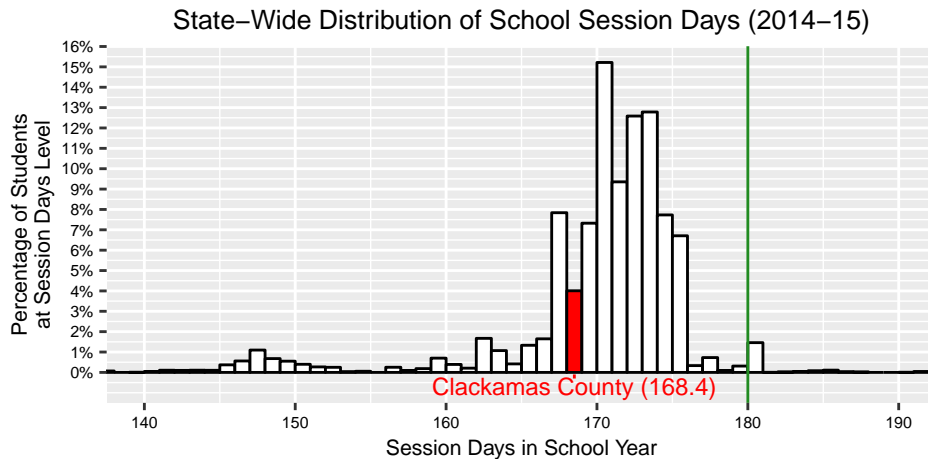

Class Size: The 2014-15 median class size in Clackamas County was around 27 students with 60.7% of classes having 26 or more students and 8.4% of classes having 36 or more students. The county had a student/teacher ratio of 24.9 which is 57.7% above the national average of 15.8 students per teacher.

Support Staff: The following table summarizes students per staff member for various support categories.

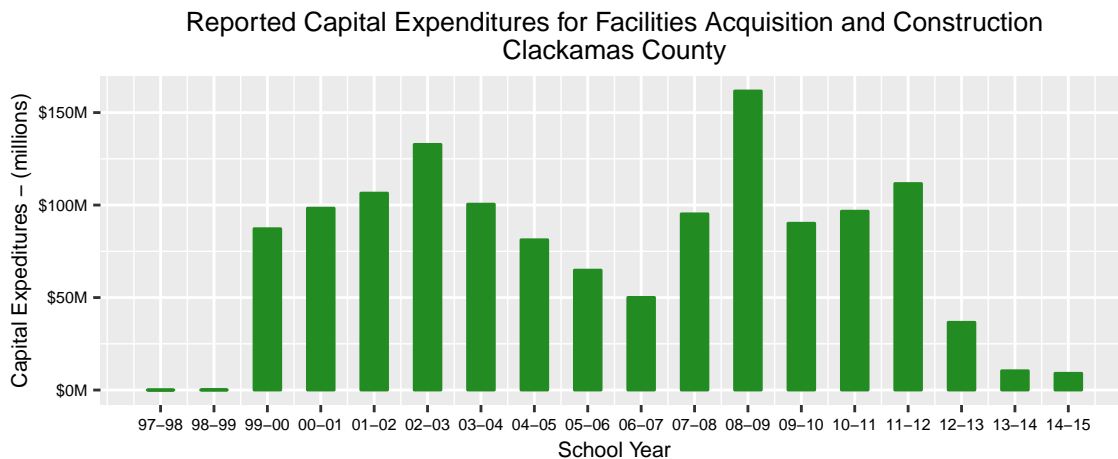

Instructional Assistant	Guidance Counselor	Library/Media Staff	Nurse
86	523	820	4,649

Graduation Rate: The 2014-15 high school graduation rate for Clackamas County was 81.2%. This is 3.6% above the state graduation rate of 78.4%.

Length of School Year: The majority of states require 180 days of student instruction.² This chart shows the distribution of session days for all students in the State of Oregon with the 180-day ideal marked in green.

Capital Spending: Spending on facilities, acquisition and construction in Clackamas County were \$178 per student in 2014-15. This is 93.8% below the annual \$2,900 per student recommended by the *2016 State of Our Schools* report³. The chart below shows historical capital spending levels.
