# 3520-600

# **Motorized Deadlocking Latch**

Narrow profile design for jamb/header mounting in standard hollow metal frame. The 24VDC motor drive retracts latch against side loads greater than 600 pounds.\*

\* A side load remote bolt retraction test emulating the apparatus/procedure described in ASTM test F1577-05, Section 6.5 resulted in the 3520-600 bolt successfully retracting against a lateral load of 1667 lbs. The test was witnessed by an independent testing laboratory - report available upon request.

# Application

- The 3520-600 series is ideal for access control in secure areas of commercial, industrial, governmental, and institutional buildings.
- The 24VDC gearmotor facilitates remote unlocking even when an abnormally high ≥600 pound side force is applied against the latch.\*
- Electrical functions allow for latch retraction and projection from a remote control point as well as manual key unlocking at the door.
- Commonly used in medium security correctional facilities to provide remotely

controlled electric unlocking of detention area sleeping room and exit doors.

- The narrow depth of the 3520-600 permits mortise mounting in a standard (i.e. 2" trim) hollow metal door frame or an architectural metal tube (e.g. borrowed light frame mullion).
- Impact tested to Security Grade 1 per ASTM F1450 and F1577.
- Installation of the 3520-600 is architecturally unobtrusive and affords superior impact and tamper resistance.

# 3520-600

# **Motorized Deadlocking Latch**

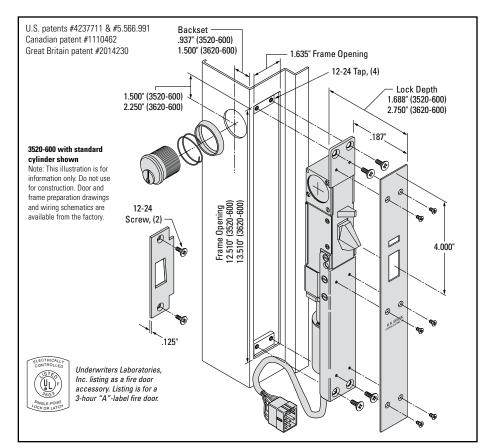

Narrow profile, designed for metal frame mounting in a standard (i.e. 2" trim) jamb/ header. The 24VDC gearmotor drive retracts latch against side loads of  $\geq$ 600 pounds.\*

#### **Standard Features**

- Structural and locking parts are stainless steel.
  All other parts and fasteners are copper alloy or
- stainless steel.
   2//" throw east stainless steel latch with two
- 3/4" throw cast stainless steel latch with two (2) saw resistant inserts.
- Maintained Switch Latch Holdback (MSLH) function (see "Motor Lock Function Reference Guide" for other functions).
- Lock status switch (LSS) trips when latch is in deadlocked condition. Used in a signal circuit to indicate lock status – unlocked or deadlocked – via control panel lights and/or alarm devices. The LSS is also used to control an electrical interlock, which permits only one of a group of doors to be unlocked at any time. Note: For positive, tamper resistant signaling of a closed and deadlocked door, a sensitive door position (DPS) switch must be wired in combination with the LSS. Our DPS Models 201023 or 201030 are recommended.
- Mechanical operation via customer supplied standard commercial key cylinder with "Yale" type cam. (Factory supplied key cylinder optional.) For stop (push) side frame keying see optional "Key Cylinder Extension" (KCE).
- Plug connectors for ease in wiring and removal.
- Exposed fasteners pinned "Torx" head
- Exposed Faceplate
  - Satin Stainless Steel (ANSI 630, US32D)

# **Electrical Data**

- Gearmotor Permanent magnet type 1.0 ampere current limited at full load. Voltage must be 24VDC, +5% -10%. A regulated power supply is recommended for optimum performance.
- Lock Status Switch 120/250VAC, 5 amp, SPDT (Form C)

### **Optional Features**

- **FKC** Factory supplied high security key cylinder with a tapered, free-spinning, spring loaded collar two change keys/cylinder.
- MOG Supplied with RRBLS proprietary 2" diameter 6-pin cylinder. Note: With this option, the lock requires a 3" minimum frame face. Model designation is 3620-600.
- EURO Lock is adapted for key operation with an Europrofile cylinder – available with 25mm or 45mm backset.
- KCE Stop (push) side key cylinder extension extends working length of a standard or mogul meeting law pulsadarts a doct

mortise key cylinder to adapt to jamb depths within a range of 4" to 9" (advise jamb depth dimension). Customer supplied cylinders must be factory fitted to each KCE.

Description

Model

3522-600

 MLH – Mechanical latch holdback by key – latch remains retracted with key removed – available with single side keying only – not available with EURO or Mogul key cylinders.

3520-600 keyed one side

**Ordering Information – 3520-600 Electromechanical Series** 

- **CKS** Factory key cylinder modification and an internal limit switch produce a key switch feature which electrically actuates the lock by one way only rotation of the change level key. This feature can be rendered inoperative by switch from a remote control panel. Mechanical unlocking is by a master level key. This feature is indicated when it is desirable to restrict periods when key unlocking is possible, e.g. building access or prison inmates who carry a key to their cell.
- MKUS (Manual Key Unlock Switch) An internal limit switch is provided to signal the occurrence of manual key unlocking. Available with one or two side keying. A special RRBLS cam is provided to replace the original with customer supplied key cylinders. Can be used in combination with the CKS feature.
- **RC** Rectifier with plug-in adapter permits 24VAC input

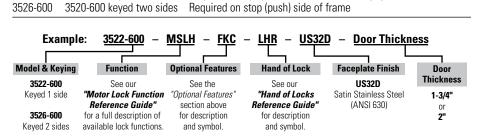

Required if key cylinder is mounted on stop (push) side of frame

Consult our technical service personnel regarding custom applications such as retrofits to existing lock installations and special mounting situations.
