Teeth Whitening

Don’t trust your smile to anyone but a qualified dentist.
Your teeth need to be brightened safely using the latest technologies.

About
We can either whiten your teeth right here at our practice in one quick visit or you can apply a course of treatments yourself in the privacy of your own home.

Whitening in our Dental Practice
This is a quick and easy treatment which takes about an hour to complete under the supervision of a dentist. A strong bleaching gel is applied to your teeth which enables up to 5 shades whiter teeth in less time than it takes to watch your favourite movie. In fact, you can lie back and watch a tv show or movie from our ceiling entertainment systems.

Home Whitening Treatments
Whitening your teeth at home involves wearing a thin plastic tray, which is moulded to your teeth by the dentist. These trays hold a bleaching agent against the surface of your teeth. Spending only 45 minutes a day you can have your teeth 4 - 5 shades whiter within 7 - 14 days.

At Paramount Dental Sydney we use the best medical grade bleaching agent, Opalescence.

Only Allow a Dentist to Whiten Your Teeth
If the person administering treatment to you is not medically qualified, they can cause further damage to existing problems and also damage enamel.
