

# HOW TO PREPARE YOUR PACKAGE

## RECOMMENDED TIPS ON ENSURING YOUR PARTS ARRIVE SAFELY

If you have ever shipped something, you understand that packages can be easily damaged! Below are some guidelines we recommend when sending parts to us. We take pride in ensuring your parts are kept safe. In the event your parts arrive at Jet-Hot damaged, we will notify you immediately.

### STEP 1. CONTAINER

Use a sturdy, double walled cardboard box, that's not too big or too small for your parts. We recommend having at least 2" of space on all sides between your part and the box, and no more than 6".

### STEP 2. PACKING

**DO NOT** use packing peanuts. Your parts will shift around while being transported, which can cause your parts to bump against each other, or break through the box. We recommend plenty of strong packing paper, and or packing foam.

### STEP 3. PLACING

If you have multiple parts, make sure they aren't touching. When shifted around during transport they can become damaged easily. Placing cardboard or bubble wrap between the parts can better protect against part to part damage.
