Safety

We ensure every body protector we produce exceeds the maximum requirements by the European Safety Standards and we pride ourselves on producing body protectors which offer a superior fit combined with the latest technology.

Our strength lies in being at the forefront of cutting technology. Our research and development teams work around the clock to research new and innovative ways of producing products which enhance rider safety whilst incorporating the latest scientific and technologically advanced materials into the products we create.

Six Steps to a Perfect Airowear Fit

STEP 1- The body protector should be fitted over light clothing and heavier garments worn over the top.

STEP 2- Take the A-chest, B-waist, C-over shoulder (waist-to-waist) and D-back length measurements in cm, then find the size using the charts within the chosen style. A ladies fit may be better achieved by choosing one size smaller than the actual chest measurement.

STEP 3- Before trying on, loosen the chest and waist fastenings. Flex the garment before fitting.

STEP 4- Fasten at the chest and waist, ensuring the visual fit indicators are covered and there is enough room for adjustment.

STEP 5- Once the body protector fits securely around the chest and waist, choose the length appropriate to height. The shoulders and neckline should lie flat against the body. If this cannot be achieved, a shorter length may be needed.

STEP 6- Check the back length by sitting on a saddle and simulating all riding positions. There should be approximately a hands width between the saddle and base of the garment.

At the front, the body protector should reach the breastbone and cover the bottom rib at mid-chest by 2.5cm.

What is UltraFlex™ Technology?

Our philosophy is to design body protectors which provide the best level of safety combined with unrivalled tailoring with the most comfortable body protectors on the market today.

To achieve this, our body protectors are made from a combination of multiple levels of impact-absorbing materials with airflow technology. Our impact absorbing materials absorb and spread impact in the case of a fall or kick and thereby lessening or reducing the injury sustained from a fall or kick. Our airflow technologies are incorporated within the impact absorbing foams to generate movement of air and ultimately create a lighter weight product for the rider.

This unique combination combined with the way the foams are structured into the garment is what makes our UltraFlex™ Technology so ground breaking.

Why UltraFlex™ Technology?

The UltraFlex™ structure enables the impact absorbing materials to quickly mould to the shape of the rider without relying on body heat to soften. Traditionally when combined with body heat, body protectors become softer after time as they react to changes in temperature. By contrast, body protectors which incorporate UltraFlex™ technology take even less time to soften, as it absorbs heat from the body much quicker than traditional materials. This provides immediate comfort for the rider and helps to break the misconceptions associated with single-paneled body protectors.

UltraFlex™ technology cleverly spreads around the torso, making it mould comfortably to the contours of the body, resulting in a flexible fit.

Airowear *Ladies Back Protector*

Designed for females of all shapes and sizes, Women's Outlyne has been developed through years of scientific research into how a body protector should fit a woman. Women's Outlyne combines maximum protection and unrestrictive movement with a perfect fit and super soft flexibility.

CODE: AW LADIES B-PRO
Size: Sml, Med, L3 Reg, L3 Slim, L4 Reg, L4 Slim, L4 Long/slim, L5 Reg, L6 Reg.
Colours: Grey/Black

Airowear *Men's Back Protector*

Men's Outlyne provides a tailored, masculine fit for male riders of all shapes and sizes.

CODE: AW MENS B-PRO
Size: Med, Large, M3 Reg, M4 Reg, M5 Reg
Colours: Grey/Black

Airowear *Ladies Teen Back Protector*

Teen Outlyne is designed specifically for teenage riders. For teenage girls, Teen Outlyne is darted at the front to provide room for the bust. For teenage boys, Teen Outlyne is generously tailored over the shoulders and cut generously across the rib cage, specially for a masculine fit.

CODE: AW LADIES TEEN
Size: Reg, Short, Slim, Long
Colours: Grey/Black

Airowear *Youth Back Protector*

When safety is so important- make the right decision for your young rider. Airowear offers a superior fit, supreme comfort and best of all the highest safety rating. Hugely popular in Europe, this brand is all about quality and high tech design to ensure you get value for your dollar.

CODE: AW YOUTH BP
Size: Y2, Y3, Y4, Y5
Colours: Black

Airowear Shoulder Pads

For those who prefer shoulder pads for added protection.

CODE: AW SHLD PAD
Size: Med, Large

Airowear AyrVest

The AyrVest by Airowear challenges the performance and appearance of conventional body protectors and brings Airowear's innovative air circulation system to the market for the first time. The air system is fully encased in nylon and complete with controlled airways that prevent over-inflation and puncturing, it inflates away from the body to create a protection zone that doesn't cause discomfort to the rider but also offers support around the jaw and sternum as well as over the pelvis and hips.

CODE: AW AYRVEST
Size: XXS, XS, S, M
Colours: Black, Navy

Airowear Base Layer

BodyBase™, the performance sports baselayer, is designed to improve comfort for equestrians by incorporating a loose fitting baselayer with moisture wicking properties. The BodyBase fabric stretches with your body to enhance movement and flexibility whilst improving comfort for the rider.

KIDS
CODE: AW BODY BASE C
Size: Small, Medium, Large
Colours: Navy, White
