

# hydro patch

MINI HERB AND SALAD GARDEN

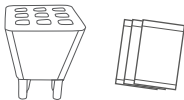

**USER MANUAL**

## INCLUSIONS

hydropatch™ mini herb & salad garden unit

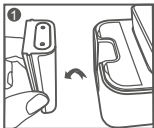

2 x growing pods, vermiculite growing medium & 3 x fertiliser sachets

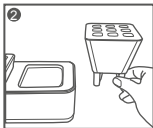

2 x AAA batteries

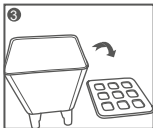

## GETTING STARTED

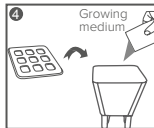

1 Remove the control panel from the HydroPatch™ mini herb & salad garden.

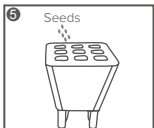

2 Lift out the growing pod with the vermiculite growing medium.

3 Open the growing cover and foam pad and discard the foam pad.

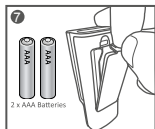

4 Replace the growing cover back on to the growing pod with vermiculite growing medium.

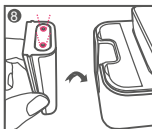

5 Sow the seeds in the vermiculite planting medium, in the growing pods, by dropping 2 seeds into each grid.

6 For best results, after you sow the seeds, please shake the growing pod a little to ensure the vermiculite planting medium covers the seeds.

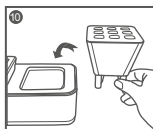

Open the controller battery cover, fit 2 x AAA batteries (included). Replace the controller battery cover.

Position the controller back in to the basin body, the two LED Indicator lights will flash simultaneously for 5 seconds.

Add water directly in to the basin and fill to indicated water level. Add one sachet of fertiliser directly in to the water to encourage germination. Do not pour water or fertiliser into the growing pods with the vermiculite and seeds.

Place the growing pods back in to the basin body. The System Controller will beep when the water needs to be filled. With every refill of water add a sachet of fertiliser to encourage plant growth.

### What kind of plants are suitable for growing in a hydropatch™ mini herb and salad garden?

The hydropatch mini herb and salad garden supports 4 types of planting patterns:

- Seeds: Suitable for the majority of herbs, dwarf vanilla plants and flower seeds.
- Transplanting seedlings: Clean soil from the plant and roots, then put the plant into the growing pods and pour over the vermiculite planting medium to cover the roots.
- Hydroponics planting: insert hydroponics plant into the growing pod and pour over the vermiculite planting medium. The plant will absorb nutrition from the medium and grow.
- Bulbs: Place bulbs (eg. daffodil, hyacinth) into the growing pod and pour over the vermiculite planting medium. The plants will grow.

***Why won't the seeds sprout?***

There are two possibilities; Firstly, the quality of the seed is poor or the seed is out of expiration date. Secondly, seeds should be covered lightly by the vermiculite planting medium, instead of sitting on the surface.

Please remember to shake the growing pod a little after sowing the seeds to ensure the vermiculite planting medium covers the seeds.

***Where should I keep the hydropatch™ mini herb and salad garden?***

This depends on the features of the plants you have chosen. If it is a plant that is attracted to sunlight, please position on a sunny office desk, windowsill or other places near lamps. If the plant does not like direct sunlight, please position it somewhere out of the sunlight.

***Does the hydropatch™ mini herb and salad garden work all year round?***

Temperature is a significant factor that can influence growth of your plant. You can choose different plants to suit different seasons and temperatures.

***How do you know when to refill the water?***

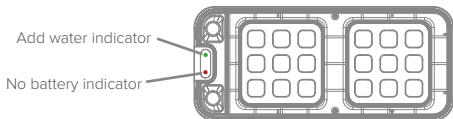

When the indicator light flashes green, please refill the water to the water level in basin.

***How do you know when to add fertiliser?***

With every refill of water add a sachet of fertiliser to encourage plant growth.

***How do you know when the batteries need to be changed?***

When the indicator light turns red, please change the batteries.

**Soluble Plant Feed 20:20:20 + TE**

**SAFETY AND STORAGE INFORMATION**

STORE IN ORIGINAL CONTAINER IN COOL, DRY CONDITIONS  
AWAY FROM CHILDREN AND PETS.

WASH HANDS AFTER USE.

PRODUCT HAS UNLIMITED SHELF LIFE.
