PLUM ISLAND: A CONNECTING LANDSCAPE OF HISTORY, NATURE, RESEARCH
Beautiful and mysterious Plum Island is an 822-acre, storied landscape about a mile and a half off the eastern tip of Orient Point, New York, where Long Island Sound and the Peconic Estuary empty into clean, oxygen-rich waters. It is a landscape that connects history, nature, and research.

Ecologists and other scientists are learning and sharing the story of high biodiversity on the island, in its surrounding waters, and as part of an island chain and coastal ecosystem. Historians and archaeologists are investigating the island’s earliest human uses.

Plum Island’s transformations over the last century—from military uses, to a world-class animal disease laboratory, to future economic uses—intrigue people nationwide. We have come together as a region to envision Plum Island’s future: a combined preserve, research center, and interpretive historical site.

This future—which celebrates Plum Island’s past; protects its ecological value; promotes economic sustainability; and unites people with park, research, and educational opportunities—is at risk of being lost forever to inappropriate development.
Windswept, surrounded by biologically rich waters, and hosting significant ecological communities, Plum Island invites us to visit, learn, and continue research. A marine eelgrass meadow, a community declining in New York, could be an underwater research site.

While absorbing panoramic views of coastal and freshwater landscapes, visitors will enjoy passive recreation, nature observation, and historic site interpretation through limited-access tourism and educational opportunities or a sensitively-sited extension of New York’s trail system.

Guides and guests will celebrate specifically planned and managed areas of cultural, military, and natural heritage, learning how the island’s location and its geological and ecological attributes have influenced uses by wildlife, plants, and people over the ages. “A Friends of” organization will help to secure and steward the natural resources of the island.
The iconic Plum Island Lighthouse, a National Register historic site overlooking turbulent Plum Gut, will be restored and reused for tours and tales of mariner rescues. Visitors will read interpretive signs and maps along historical pathways and elevated walkways. Areas with cultural and historical significance will be managed carefully to ensure compatibility with natural processes.

Day visitors will enjoy tours of historic Fort Terry to explore its critical role in United States defense and its unique features that dot the northern and eastern portions of the island. At a dedicated Plum Island museum located on Orient Point, explorers can also learn of earlier uses of Plum Island by Native Americans, colonists, and subsequent owners. Archaeologists will conduct sensitively-undertaken research to expand understanding of our shared cultural heritage.

Partners will stabilize, maintain, and interpret historic buildings at several sites around the island. Researchers and students will use a small field station and dormitory in an adaptively refurbished building for academic studies and one-night stays. Interpretive programs will commemorate the Plum Island Animal Disease Center’s research and vaccine development, which have been vital to protecting animal agriculture.

ENCOUNTER THE CULTURE & HISTORY OF AN EARLY AMERICAN COASTAL LANDSCAPE
Through partnerships with federal, state, and local governments, nonprofit organizations, and volunteers, Plum Island will become a place of study, conservation, and ecological restoration. Researchers will study the island’s exemplary marine rocky intertidal zone; maritime bluffs, beaches, and dunes; and eelgrass beds and nearshore marine biology. Conservation efforts will demonstrate how natural areas can rebound and thrive.

Academic researchers and students will study sensitive natural areas by special permission. Day visitors will be inspired viewing wildlife at a 96-acre freshwater wetland and join guided walks to learn about the island’s 227 bird species, 22 state-listed endangered, threatened, and rare plant species, and 25 natural communities.

Harbor seals haul out on the rocks at Plum Island during the winter in the largest numbers anywhere in New York. Sea turtles, harbor porpoises, and whales use the surrounding waters. Seeing the conservation potential of this critically valuable natural resource area, in 2019 New York created the Marine Mammal and Sea Turtle Protection Area around Plum, Great Gull, and Little Gull Islands.

CONSERVE A RARE NATURAL ECOSYSTEM
We envision academic or industry-driven research at the western end of Plum Island, near the harbor. Areas of particular interest to the region include biotech, health, energy, power structure cybersecurity, climate science, island studies, or ecology. The new center would provide transportation to and from the island, as well as easements for and transit to conservation zones and the lighthouse. The enterprise also would contribute resources for the overall management of the island preserve.

Long Island’s “research corridor” would expand to include Plum Island, continuing the island’s prestige as a center of innovation, drawing new investment, and providing good jobs. Repurposed office and auditorium space and potentially new laboratories—housed in energy-efficient, bird-friendly buildings—would provide experimental and learning spaces and could host meetings, conferences, or other events.

Workers and visitors would reach the island via the former research center’s ferry site at Orient Point. Families would visit a museum at the Orient Point dock to discover Plum Island’s history, cultural heritage, and ecosystems. We predict countless “Eureka!” moments once people travel to Plum Island for work or pleasure.
DID YOU KNOW?

- **Plum Island and its wildlife belong to the people.** Plum Island is publicly owned and its wildlife and natural assets are held in trust for us.

- Laws enacted in 2008 and 2012 exempted Plum Island from the federal government’s normal process for releasing property it no longer needs. Instead of giving other federal agencies such as U.S. Fish and Wildlife Service, or state entities such as the New York Department of Conservation, a chance to preserve the property, Congress set the stage for the Department of Homeland Security and the General Services Administration to auction Plum Island off to the highest bidder.

- The **Preserve Plum Island Coalition** (preserveplumisland.org), coordinated by Save the Sound (savethesound.org), supports preservation of Plum Island and reuse of the research center.

- **At least 111 species of conservation concern** use Plum Island. That makes the island not only fascinating, but an extraordinary living laboratory for the natural sciences.

- The **Plum Island Lighthouse**, built in 1869, can be restored to its former glory by interested maritime groups for everyone’s enjoyment.

- **Fort Terry**, commissioned before the Spanish-American War, was in service through World War II. Its surviving features illustrate military evolution and will fascinate everyone.

- The **Plum Island Animal Disease Center’s** vaccine for foot-and-mouth disease saved agriculture and worldwide economies from devastating effects on food supplies. The Center’s work will continue at the National Bio and Agro-Defense Facility in Kansas.
ENVISION PLUM ISLAND PRESERVE:
A CONNECTING LANDSCAPE

- **Conservation**: Public-purpose partnerships—federal, state, and local governments, nonprofits, volunteers
- **Research**: 125-acre academic/industry campus, high-quality jobs, repurposed buildings
- **Historic Preservation**: Fort Terry, Plum Island Lighthouse
- **Museum**: Natural and cultural heritage, history
- **Ferry**: From Orient Point, NY
- **Sustainability**: Controlled ecotourism, connections to trail system
- **Friends**: Partnerships for security and support
