Omega-V Rx™

Complete Essential Omega 3 Fatty Acid Complex

Scientists have discovered that Omega-3 fatty acids are essential for a longer life, healthier weight, optimal physical and mental performance, and overall well-being.

Omega-3 Fatty Acids help to:

- Fight heart and circulatory problems
- Reduce arthritis pain and inflammation
- Optimize mental functioning
- Fight diabetes, cancer and prostate disease
- Balance female hormones
- Prevent premature aging
- Preserve the integrity of skin, hair and eye health

Omega-3's Help Slow The Aging Process

You want to increase your overall health and energy level. You want to help prevent heart disease, cancer, depression and Alzheimer's. Perhaps you also want to safely fight the pain and inflammation of rheumatoid arthritis, osteoarthritis or gout, or safely treat diabetes, ulcerative colitis, and many other conditions. You might also want to get rid of some unwanted body fat and get help developing more lean muscle. And, you certainly could be interested in preserving a youthful appearance. One of the most important things you can do for your health and longevity is to increase your intake of Omega-3's like those found in Omega-V Rx™.

Omega 3's are found primarily in cold-water fish and certain vegetables, and cannot be manufactured in the human body. Because they must be supplied in the diet, they are often referred to as "essential fatty acids" (EFAs). EFAs are undetectable in blood samples of 20 percent of Americans. Surveys also suggest that most Americans are obtaining only about 10 per cent of what they need for optimal health. The need is clear that many of us are deficient in Omega-3's.
IMPORTANT FOR MEN: Omega-3 fatty acids are critical for your sexual and heart health, fighting prostate disease, and improving athletic performance, fat metabolism, and lean muscle mass. While the fatty acids are defined as fats - they actually act in the body as anti-fats! Instead of adding unsightly body fat, they actually stimulate metabolic processes that speed fat reduction.

IMPORTANT FOR WOMEN: Omega-3 fatty acids support the healthy function of your hormonal system, provide freedom from monthly or midlife female discomforts, help you lose body fat, and help protect and fight against breast and other forms of cancer.

Scientifically Validated Benefits
Over 60 health ailments have been scientifically validated to benefit from the use of essential fatty acids. Large-scale medical studies confirm that people at risk for coronary heart disease benefit from consuming Omega-3 fatty acids from vegetable sources. Omega-3 fatty acids can lower high cholesterol levels by 25% and high triglycerides by 65%. Omega-3 fatty acids have the uncanny ability to break down cholesterol in the lining of blood vessels, as well as serving as a solvent for saturated fats in the diet.

Dietary essential fatty acids found in Omega-V Rx™ are ultimately converted to hormone-like substances known as prostaglandins, and are important for the regulation of many bodily functions resulting in an enhanced quality of living. Because the Omega-3’s are needed by every cell in the body it follows that an insufficiency will have some effect on every part of the body, including the brain.

Low Omega-3 levels are associated with:

- Under development of the brain
- Depression, aggression, schizophrenia
- Dementia and poor memory
- Dyslexia, dyspraxia and ADHD
- Poor eyesight
- Cardiovascular disorders and angina
- Stroke
- Cancer
- Cystic fibrosis
- Psoriasis and eczema
- Crohn's disease
- Osteoporosis
- Osteo and Rheumatoid Arthritis
- Gout
- Water retention
- Obesity
- Lack of energy
- Diminished sexual function
- Migraines
- Chronic viral, bacterial and fungal infections
- Inflammatory bowel disease
- Multiple Sclerosis
- Prostate problems
- Poor athletic performance
- Looking old before your time
