An Overlooked Issue
The importance of maintaining your body’s proper pH balance is perhaps the most overlooked health issue. The typical Western diet, including meat, processed food, white flour, sugar, and alcohol creates a toxic acidic state in your body. Many drugs and artificial chemical sweeteners like Equal, NutraSweet, Splenda and aspartame are also highly acid forming. If you drink too much coffee or soda you’re almost guaranteed to have a disease-causing acidic pH. The most obvious symptoms are bad breath and intestinal gas. But the most dangerous results are unseen degenerative diseases that creep up on you until you suffer a heart attack, some form of cancer or another debilitating disease. Your body will not work to its optimum potential, and will never properly absorb the nutritional supplements you take, if it does not have a slightly alkaline pH.

The First Step in Health
Acidic blood pH levels that cause toxic acid wastes can also lead to many other health problems such as low energy, unwanted weight gain, poor athletic performance, cholesterol plaque buildup and accelerated aging. Proper cellular pH balance is vital for healing and rebuilding your body, and detoxifying and eliminating accumulated toxins – especially from the liver and kidneys. One of the first things you must do to support your health is establish that your body’s pH is properly balanced. Halting an acid body pH is believed to be the first step toward preventing premature aging, wrinkling, hormonal imbalances, eyesight disorders, memory problems and a host of other age-related concerns. **pH Balance Rx™** is your frontline nutritional defense.

**pH Balance Rx™ helps:**
- Reduce acidic build-up and rebalance your pH
- Improve blood circulation
- Dissolve calcified and toxic deposits in your blood stream
- Promote the cleansing and repair of all body tissues
- Maintain proper insulin production and utilization
- Provide a powerhouse of Green phytochemical nutrition
- Fight acid reflux
Nutritional Strength
A high concentration of chlorophyll is contained in pH Balance Rx™, which not only helps make your blood more alkaline, but is also the most powerful body cleansing agent known. Chlorophyll converts the sun’s solar energy into life-giving food, and also possesses the remarkable ability to help build new red blood cells – improving the oxygen flow in your bloodstream. Additionally, it promotes intestinal regularity and detoxifies the bowel, liver, kidneys and blood. In short, pH Balance Rx™ serves to coordinate your entire body’s metabolism.

Understanding pH
We live and die at the cellular level. All of the trillions of cells that make up the human body are slightly alkaline, and must maintain that alkalinity to function and stay healthy. pH stands for “potential of Hydrogen”, which is a measure of the acidity or alkalinity of a solution, such as a mixture of liquids. It is measured on a scale of 0 to 14 - the lower the pH the more acidic the solution, and the higher the pH the more alkaline the solution. When a solution is neither acid nor alkaline it has a neutral pH of 7. Your body’s pH is in balance between 7.36 and 7.44.

It is important to understand that we are not talking about stomach acid, saliva, or urine. We are talking about the pH of the body’s fluids, tissues and blood. Since most of the body is liquid, the pH level has a profound effect on body chemistry. Your body’s pH management regulates breathing, circulation, digestion, elimination, hormone production and immune defense – and impacts every biochemical process in the body.

An Acid pH Harms Your Health
Over time, even mild acidity in your body can cause such problems as:
- Cardiovascular damage - constricted blood vessels, clogged arteries, weakened veins, and reduced oxygen
- All forms of Cancer
- Unwanted weight/fat gain, obesity, insulin disorders, and diabetes
- Liver, bladder and kidney conditions, including kidney and gallstones
- Weakened immune system, increased stress, raised blood pressure
- Neurological diseases: MS, ALS, Parkinson’s, Alzheimer’s
- Accelerated of free radical damage
- Premature aging, frequent headaches, sinusitis, constipation, hemorrhoids
- Osteoporosis, weak, brittle bones, hip fractures, bone spurs and calcium deposits
- Osteoarthritis, joint pain, aching muscles and lactic acid buildup
- Hormonal imbalances, prostate problems and adult acne
- Low energy and chronic fatigue, fibromyalgia, acid indigestion and flatulence
- Acid Reflux

A Domino Effect
As your body becomes acidic, your pH level drops. Your body starts losing calcium in your blood, bones, and tissues. Your oxygen level drops, leaving you tired and fatigued. Your immune system becomes compromised, allowing fungus, mold, parasites, bad bacteria, and viral infections to flourish. Cancer also thrives in an acid tissue pH/oxygen deficient environment. Your body may also produce fat to “hold” the excess acid and keep it a safe distance from your organs, making you obese. Many people have found that a return to a balanced body pH helps them lose excess fat. In just weeks, customers not only report feeling better, looking better, and having more energy, but many also report shedding excess pounds and inches.

At AARL we help you keep your body young, so you’ll look better, feel better, and have more energy for life.
