## ANATOMY BASED SEXUALLY TRANSMITTED INFECTION SCREENING RECOMMENDATIONS

	Sexually Active Individuals with a Cervix				Sexually Active Individuals with a Penis		
	Aged <25	Aged ≥25	Pregnant <ul style="list-style-type: none"> <li>• Aged &lt;25</li> <li>• Aged ≥25 if at increased risk<sup>1</sup> or high-prevalence setting<sup>2</sup></li> </ul>	Living with HIV	Only has Partners with a Cervix	Has Partners with a Penis <sup>3</sup>	Living with HIV
<b>Chlamydia Gonorrhea*</b>  Retest 3 months after treatment	At least annually	Screen at least annually if increased risk <sup>1</sup> or high prevalence setting <sup>2</sup>	At 1st prenatal visit  Perform test-of-cure 3-4 weeks after treatment  CT only: Retest during 3rd trimester	At least annually  Repeat as often as every 3 months if at increased risk <sup>1</sup>	Screen at least annually if increased risk <sup>1</sup> or high prevalence setting <sup>2</sup>	At least annually  Repeat as often as every 3 months if at increased risk <sup>1</sup>	At least annually  Repeat as often as every 3 months if at increased risk <sup>1</sup>
<b>Syphilis</b>	At least one once between ages 15-44, repeat according to risk <sup>1</sup>	At least one lifetime test between ages 15-44, repeat according to risk <sup>1</sup>	At 1st prenatal visit, at 28-32 weeks, and at delivery <sup>4</sup>	At least annually  Repeat as often as every 3 months if at increased risk <sup>1</sup>	Screen at least annually if increased risk <sup>1</sup> or high prevalence setting <sup>2</sup>	At least annually  Repeat as often as every 3 months if at increased risk <sup>1</sup>	At least annually  Repeat as often as every 3 months if at increased risk <sup>1</sup>
<b>Hepatitis C</b>	At least once between ages 18-79, repeat according to risk <sup>5</sup>	At least once between ages 18-79, repeat according to risk <sup>5</sup>	Screen according to risk <sup>5</sup>	At least once, repeat according to risk <sup>5</sup>	At least once between ages 18-79, repeat according to risk <sup>5</sup>	At least once between ages 18-79, repeat according to risk <sup>5</sup>	At least once, repeat according to risk <sup>5</sup>
<b>HIV</b>	At least once between ages 13-64, repeat according to individual risk <sup>1</sup>	At least once between ages 13-64, repeat according to individual risk <sup>1</sup>	At 1st prenatal visit  Repeat in 3rd trimester if increased individual risk <sup>1</sup> or high prevalence setting <sup>2</sup>		At least once between ages 13-64, repeat according to individual risk <sup>1</sup>	At least annually  Repeat every 3-6 months as indicated by individual risk <sup>1</sup>	

\* Screen all sites of contact reported by patient:

- ◇ CT: urethra, rectum
- ◇ GC: urethra, rectum, pharynx

<sup>1</sup> Individual risk factors include: previous STI, recreational drug use (particularly methamphetamine and other stimulants), multiple sex partners, condomless intercourse.

<sup>2</sup> High-prevalence settings include but are not limited to: correctional facilities, adolescent clinics, STD clinics.

<sup>3</sup> Individuals in this category either 1) exclusively have partners with a penis or 2) have partners with a penis and partners with a cervix

<sup>4</sup> Three screenings recommended in pregnancy due to ongoing syphilis epidemic and increase in congenital syphilis cases in OR.

<sup>5</sup> Risk factors include: history of current or past injection drug use, intranasal drug use, or incarceration; have an unregulated tattoo; received long-term hemodialysis; receipt of a blood transfusion before 1992.

**Screening transgender patients: Assess risks for STIs and HIV based on current anatomy and sexual behaviors.**
