ITS America and Cyber Future Foundation Form Intelligent Transportation Cyber Security Task Force

Washington D.C. – Intelligent Transportation Society of America (ITSA) and the Frisco, Texas based Cyber Future Foundation (CFF) are announcing a partnership to form the Intelligent Transportation Cybersecurity Task Force (ITCTF). The ITCTF is made up of transportation officials, automotive manufacturers, government and academic leaders, and other broader industry constituencies. Five working groups will review the critical issues posed as they relate to transportation; technology challenges; legal and liability issues; policy, regulation, and legislation.

“Transformational transportation technologies are already dramatically changing the way both people and goods travel. As vehicles and infrastructure become more connected, it is critical to address these issues to assure the highest level of safety, privacy and reliability,” said ITS America President and CEO Regina Hopper.

CFF Chairman and Founder Valmiki Mukherjee states, “This task force is made up of some of the best minds in cyber security across the public, private and academic sectors. We will look at the challenges and opportunities these technologies present as we formulate sound policy for the future.

About ITS America

ITS America is the nation’s leading advocate for the technological modernization of our transportation system by focusing on advancing research and deployment of intelligent transportation systems. Its unique membership brings together all key stakeholders in the intelligent transportation movement—including established and emerging private companies, public agencies and state DOT officials as well as leaders in the academic and research communities.

About the Cyber Future Foundation

The Cyber Future Foundation was established to create a brighter and trusted future for the cyberspace where digital commerce and innovation can thrive based on trust and respect to individual privacy.
