U.S. Army to Hold Conference on the Role of Autonomy in the Military

August 21, 2017 — ITS America members, we have learned about an important conference that will be taking place in Detroit November 7th and 8th and we want to let you know about the event.

The theme of the conference is “Accelerating Autonomy Deployment: Partnering with Industry to Enhance Army Readiness through Modernization.”

It's the Association of the U.S. Army's first ever autonomy symposium and its goal is to connect the military with leaders in the intelligent transportation industry to generate military stakeholder awareness of mature, and near-term autonomous technology. The role artificial intelligence will play in autonomy and the pathways the military can use to develop this technology for the nation’s defense will be discussed.

Day one will include plenary and technical sessions and on day two, there will be a technical panel discussion.

If you would like to learn more about the conference and attend, go to https://www.ausa.org/autonomous for more information.
