High-Profile Companies, State DOTs Included in Broad Group of New ITS America Members

Washington D.C. – A top automaker, high-profile and start-up technology companies, and five state departments of transportation are among a larger group of organizations that joined the Intelligent Transportation Society of America (ITS America) in the first quarter of 2018.

Audi of America/Volkswagen Group of America, Blyncsy, Cisco Systems, Panasonic Corporation, Volvo Technology of America as well as the Hawaii, Nevada, Oregon, Tennessee and Wyoming departments of transportation are part of the growing number of organizations working with ITS America to advance the research and deployment of smart transportation technologies.

“We are thrilled these leading private and public organizations have added their voices as we ramp up our call for investment in smart infrastructure,” said ITS America President and CEO Shailen Bhatt. “The sooner we can deploy intelligent transportation technologies on a large scale, the sooner we can save more lives, improve mobility, and increase efficiency and productivity.”

These new members join the ranks of other private companies and public agencies, in addition to research organizations and academia, which ITS America convenes to create an environment that fosters innovation.

In addition to those noted above, other new members in the first quarter of 2018 include: Fortis Consulting Services; GEWI; McCain; Security Design Professionals LLC; and Traffic Technology Services.
