Row House

The Row House, Inc. was incorporated in July 1969 by a small group of civic minded citizens who were determined to preserve Hallowell's rich history as told through its buildings. The initial corporation's eleven officers and trustees gave the seed money to purchase what was seen to be the most endangered historic property, the Gage Block. This structure had been built in 1846 by Isaac Gage to house Cotton Mill personnel.

This wooden row house on Second Street, known as the Row House, provided the historic preservation society its corporate name. Application to the National Register of Historic Places was accepted and added to the National Register of Historic Places in 1970. Today the building houses rental apartments, and Unit 106 is open for you to explore.

Administration Building

The Administration Building is the first rehabilitation project to be completed at the Stevens School campus. Using state and federal historic tax credits, the building is now professional office space on the first floor with four apartments filling the upper stories.

Deteriorated exterior features have been restored and interior alterations sensitively made to retain historic character, with only minimal changes to the floor plan. The colonnaded two-story front porch had significant structural damage from carpenter ants and rot, and that has now been repaired. Historic windows were rehabilitated, and low-profile Allied storm windows added for efficiency while an inappropriate modern front door was replaced with a more compatible design. Inside, drop ceilings were removed and hardwood floors restored with new hardwood installed in the front hall where the historic wood flooring had been lost. Today you can see the first floor of this fantastic rehabilitation project.
