Every country needs to find, stop, and prevent disease threats, but many are not adequately prepared to effectively address threats caused by outbreaks such as Ebola, Zika, or other new and emerging organisms.

A global epidemic has the potential to kill millions, cost trillions of dollars, and disrupt society for months or even years.  

The risk of antimicrobial resistance, where antibiotics are no longer effective, threatens to reverse medical advances and turn the clock back to a time when common infections could kill thousands of people.

Developed in the wake of the Ebola epidemic, the Joint External Evaluation (JEE) process is a rigorous, objective, and transparent accountability framework designed to identify life-threatening public health gaps in each country to reduce the risk of future epidemics.

Resolve will help governments in low- and middle-income countries strengthen their critical public health infrastructure, secure donor funding, and implement sustainable programs to strengthen four core areas to improve capacity and preparedness:

• Implement and strengthen disease tracking systems so that unusual events are promptly noticed and investigated.
• Support laboratory networks so that new and emerging pathogens are identified promptly.
• Train and support “disease detectives” – epidemiologists who will track and investigate diseases and outbreaks.
• Develop rapid response teams to investigate and stop outbreaks, and functional emergency operations centers operating within structured, effective incident management systems.

Most countries are inadequately prepared to find, stop, and prevent infectious disease outbreaks.

Preventable epidemics, including SARS and Ebola, have cost the world tens of billions of dollars.

A disease outbreak anywhere is a threat everywhere.

RESOLVETO SAVE LIVES
RESOLVE TO PREVENT EPIDEMICS
A five-year, $225 million campaign funded by Bloomberg Philanthropies, the Chan Zuckerberg Initiative, and the Bill & Melinda Gates Foundation. It is led by Dr. Tom Frieden, former director of the US Centers for Disease Control and Prevention, and coordinated by Vital Strategies, which works in 60 countries to address the world’s most challenging health issues.
